

Quick Couplings Catalog

For Hydraulic and Fluid Handling Solutions

ENGINEERING YOUR SUCCESS.

THE RIGHT SOLUTION FOR EVERY SECTOR!

Whether under water, in aerospace, on the high seas, on the street, or in industry – our quick connect coupling systems are at home in many domains and represent the right solution in numerous technical applications.

The modular structure of our series allows you to benefit from a wide standard range, which includes a suitable system for most applications – just-in-time goes without saying.

Structure of the Catalog

	Poppet Valve			FlatFace		
	S	SS	PE	S	SS	PE
Low Pressure	Thermal Management			• NSI Series • NSE Series • NSA Series		
Medium Pressure	Ball Locking	ISO Standard Profile	• 6600-Series • 2000-Series • RSD-Series	• FEM- / IF-Series		
			• 60-Series • IB-Series			
	Ball Locking	Tema Profile	• T-Series • TH-Series	• FF-Series		
	Ball Locking	Parker Profile	• SM-Series • ST-Series	• NS-Series • NSR-Series

Important Notes:

- Please note that the technical data, specifications and drawings in the catalogue are not binding. This information is subject to change without notice in the interest of improvement.
- We reserve the right to make technical modifications for the purposes of improvement.
- December 2017: With the actual catalogue the older versions are no longer valid.
- The interchangeability is guaranteed under the assumption that the manufacturer of the relevant product has not changed any functional part in the meantime.
- You will find important safety instructions on pages 12 and 13.

THE RIGHT SOLUTION FOR EVERY SECTOR!

Whether under water, in aerospace, on the high seas, on the street, or in industry – our quick connect coupling systems are at home in many domains and represent the right solution in numerous technical applications.

The modular structure of our series allows you to benefit from a wide standard range, which includes a suitable system for most applications – just-in-time goes without saying.

QUICK COUPLINGS SELECTION CRITERIAS

Before you spec it, STAMP it

When you order hose and fittings from Parker, remember the word “STAMP.”
That way you won’t forget important information!

Checklist for Selecting Quick Couplings

- What are the functional requirements of the coupling?
- What is the maximum working pressure of the application?
- Which seals and body material are compatible with the system's fluid?
- Is the application static or dynamic?
- What size coupler is required?
- What is the maximum pressure drop suitable for the application?
- Does the application require the ability to connect and disconnect under pressure?
- What is the media temperature and ambient temperature?
- What end configurations are required?
- Is an industry interchange coupler required?
- Is air inclusion and fluid loss a concern in application?

Important Notes:

- Please note that the technical data, specifications and drawings in the catalogue are not binding. This information is subject to change without notice in the interest of improvement.
- We reserve the right to make technical modifications for the purposes of improvement.
- July 2021: With the actual catalogue the older versions are no longer valid.
- The interchangeability is guaranteed under the assumption that the manufacturer of the relevant product has not changed any functional part in the meantime.
- You will find important safety instructions on pages 14 and 15.

Low Pressure

Low Pressure

Energy efficiency and compact design play a major role in thermal management applications. As a result of the low pressure drop of our coupling systems, we take energy saving into account at the same time as optimal performance. Reducing the sizes of our couplings allows their use in the

most confined spaces. The know-how we have acquired from over 60 years in the development and production of quick connect couplings guarantees a reliable and efficient solution for your requirement.

Medium Pressure

Medium Pressure

Find information about our wide range of medium pressure products on these pages used for pressures up to 500 bar. We clustered the products in their profiles such as ISO, Tema and Parker profiles to ease up your selection process. Here you can also find a chapter for our screw-to-connect couplings and our multi-coupling solutions where you can handle up to six couplings in a single operation.

FlatFace Systems

Identify all products with a FlatFace coupling design from this sign. They have a non-drip, dry-break function that also avoids air and dirt insertion in the hydraulic circuit. The flat surfaces ensure an easy cleaning especially in harsh mobile hydraulic applications. So it's an ideal alternative and an environmental friendly solution.

Pressure Eliminator

By using this technology residual pressures in hydraulic lines that avoid coupling can be overcome smoothly and without enormous efforts. A special valve design automatically releases any residual pressure and guarantees the functionality of the coupling.

High Pressure

High Pressure

This chapter provides information on our systems for use with high pressures up to 3000 bar for various applications in mobile, stationary industrial and hydraulic

areas. In here you can also find our range of high pressure adapters for a lot of hydraulic tasks.

Diagnostics

Diagnostics

Hydraulic lines or circuits have to be checked constantly due to pressure or quality of the hydraulic medium. With our diagnostic products these test can

be done easier even under working pressure conditions, to reduce disturbances of the processes to the bare minimum.

Accessories

Accessories

Besides our wide range of coupling solutions we also provide you with high-quality, helpful accessories that complete our offer and gives you the opportunity to

get all components you need from a single and reliable source.

Key to Symbols in Application Area

Machinery Construction	Railway	Chemical Technology	Mobile Hydraulics	Trade
IT	Safety Technology	Electrical Engineering	Aeronautics	Automotive

ABOVE ALL ELSE, OUR SYSTEMS OFFER YOU GREATER SAFETY.

The FlatFace Concept

Dirt-proof FlatFace couplings have the following advantages: Non-drip, dry-break function on disconnection, no air is trapped in the system during connection and extremely flat surfaces to ensure easy cleaning. Depending on the application, the FlatFace concept is the ideal alternative for an environmental high-quality solution.

The Pressure Eliminator

By using this innovative Tema patented technology, residual pressures in hydraulic lines can be overcome smoothly and without effort. The use of a micro-valve, incorporated in the coupling or plug will automatically release any residual pressure on reconnection.

The Pressure Relief Valve

A pressure relief valve mounted directly in the pressurised line will release the dynamic pressure in this hydraulic system by pushing a button. Attached couplings can now be coupled pressure-free! After connection, release the button to re-pressurise.

Lubrication Nipple

The Tema lubrication nipple is a vital accessory item in order to prevent dirt to enter into couplings in disconnected position. It will also prevent freezing up of the coupling mechanism. The nipple is simple to use, just connect onto coupling body and you can easily protect internal mechanical parts using a standard grease-gun. A valuable accessory item in many climate zones.

O-Rings / Profile Rings

Depending on the application, couplings are equipped with seals in various alternative material qualities, e.g. NBR, FKM, EPDM or PUR. In many ranges, double O-ring seals are even used as standard in order to increase safety.

ISO 7241-1, A Series

ISO 7241-1, B Series

ISO 16028

ISO-Profiles

In order to offer maximum interchangeability, our ISO A-Series (s. p. 14), ISO-B Series (s. p. 26) and ISO F-Series (s. p. 36) have been designed to conform to the latest international ISO-specifications. This will ensure full compatibility with all standard couplings and plugs which conform to the same specifications.

Steel

Brass

Stainless Steel

Material Qualities

Depending on working pressures and applications, Parker coupling systems are being offered in hardened steel or brass. In addition, numerous series can be supplied as standard in stainless steel.

Zinc pl., pass., sealed

Chrome III plated

additional sealed

nitrocarburised

Surface Finish

Galvanised, passivated and sealed:
to prevent corrosion.

Nitrocarburisation: a surface hardening.
The product acquires a black colour.

FLUID COMPATIBILITY CHART

IN ALPHABETICAL ORDER

The following seal compound and body material compatibility chart is provided as an aid in selecting a specific synthetic rubber compound or body material for a particular application. Shown here is a list of the seal materials available, with their temperature ranges.

Operating and environmental conditions must be considered when making the selection of a quick coupling. For recommendations for media not listed here, please contact your Parker representative.

Refer to the appropriate section of the catalogue for ordering information for seal codes for specific products.

To indicate a special material just add the appropriate code letter as a suffix to the catalogue number of the coupler.

It is not necessary to use the code "STD" as the standard Nitrile seal will be used when another code is not used.

Note: This chart is intended as a guide only and is not to be considered as a recommendation to use Parker quick couplings in a specific application or with a specific fluid. Other factors that must be considered include but are not limited to: fluid and ambient temperature, system pressure, both operating and peaks, frequency of connection and disconnection, and applicable standards or regulations.

SAFETY GUIDE FOR SELECTING AND USING QUICK CONNECT COUPLINGS AND RELATED ACCESSORIES

DANGER: failure or improper selection or improper use of quick connect couplings or related accessories can cause death, personal injury and property damage. Possible consequences of failure or

improper selection or improper use of quick connect couplings or related accessories include but are not limited to:

- Couplings or parts thrown off at high speed
- High velocity fluid discharge
- Contact with suddenly moving or falling objects that are to be held in position or moved by the conveyed fluid
- Dangerously whipping hose
- Explosion or burning of the conveyed fluid
- Contact with conveyed fluids that may be hot, cold, toxic, or otherwise injurious
- Sparking or explosion while paint or flammable liquid spraying

Before selecting or using any connect couplings or related accessories, it is important that you read and follow the following instructions.

1.0 GENERAL INSTRUCTIONS

1.1 Scope: this catalogue provides instructions for selecting and using (including installing connecting, disconnecting, and maintaining) quick connect couplings and related accessories (including caps, plugs, hoses, blow guns). This safety instruction is a supplement to and is to be used with the specific Parker publications for the specific quick connect couplings and related accessories that are being considered for use.

1.2 Fail-Safe: quick connect couplings or the hose they are attached to can fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of the quick connect coupling or hose will not endanger persons or property.

1.3 Distribution: provide a copy of this safety guide to each person who is responsible for selecting or using quick connect coupling products. Do not select or use quick connect couplings without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the products considered or selected.

1.4 User responsibility: due to the wide variety of operating conditions and uses for quick connect couplings, Parker RectusTema and its distributors do not represent or warrant that any particular coupling system is suitable for any specific end use system. This safety instructions do not analyse all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the quick connect couplings.
- Assuring that the user's requirements are met and that the use presents no health or safety hazards.
- Providing all appropriate health and safety warnings on the equipment on which the quick connect couplings are used.

1.5 Additional questions: call the appropriate Parker customer service department if you have any questions or require any additional information. For the telephone numbers of the appropriate customer service department, see the Parker publication for the product being considered or used.

2.0 SELECTION INSTRUCTIONS

2.1 Pressure: quick connect couplings selection must be made so that the published rated pressure of the coupling is equal to or greater than the maximum system pressure. Pressure surges in the system higher than the rated pressure of the coupling will shorten the quick connect coupling's life. Do not confuse burst pressure or other pressure values with rated pressure and do not use burst pressure or other pressure values for this purpose. Couplings greater than DN 25 operating with pressure above 10 bar are restricted to be used with liquid fluids group 2 acc to PED 2014/68/EU. Couplings used with gases of fluid group 2 must consider PED 2014/68/EU if used with Nominal Diameter greater than DN 32 and are limited to a product of PS x DN greater than 1000 bar. For fluids Group 1 please see catalogue "Snap-tite H, IH, & PH Series", (LEAF/3800-H Series/UK).

2.2 Fluid compatibility: quick connect couplings selection must assure compatibility of the body and seal materials with the fluid media used. See the fluid compatibility chart. See also 2.1 above.

2.3 Temperature: be certain that fluid and ambient temperatures, both steady and transient, do not exceed the limitations of the quick connect couplings. Use caution and hand protection when connecting or disconnecting quick connect couplings that are heated or cooled by the media they are conducting or by their environment.

2.4 Size: transmission or power by means of pressurised liquid varies with pressure and rate of flow. The size of the quick connect couplings and other components of the system must be adequate to keep pressure losses to a minimum and avoid damage due to heat generation or excessive fluid velocity.

2.5 Pressurised connection or disconnection: if connecting or disconnecting under pressure is a requirement, use only quick connect couplings designed for that purpose. The rated operating pressure of a quick connect coupling may not be the pressure at which it may be safely connected or disconnected.

2.6 Environment: care must be taken to ensure that quick connect couplings are either compatible with or protected from the environment (that is, surrounding conditions) to which they are exposed. Environmental conditions including but not limited to ultraviolet radiation, ozone, moisture, water, salt water, chemicals, and air pollutants can cause degradation and premature failure.

2.7 Locking means: ball locking quick connect couplings can unintentionally disconnect if they are dragged over obstructions on the end of a hose or if the sleeve is bumped or moved enough to cause disconnection. Sleeves designed with flanges to provide better gripping for oily or gloved hands are especially susceptible to accidental disconnection and should not be used where these conditions exist. Sleeve lock or union (threaded) sleeve designs should be considered where there is a potential for accidental uncoupling.

2.8 Mechanical loads: external forces can significantly reduce quick connect couplings' life or cause failure. Mechanical loads which must be considered include excessive tensile or side loads and vibration. Unusual applications may require special testing prior to quick connect couplings selection.

2.9 Specifications and standards: when selecting quick connect couplings, government, industry and Parker specifications must be reviewed and followed as applicable.

2.10 Vacuum: not all quick connect couplings are suitable or recommended for vacuum service. Quick connect couplings used for vacuum applications must be selected to ensure that the quick connect couplings will withstand the vacuum and pressure of the system.

2.11 Fire resistant fluids: some fire resistant fluids require seals other than the standard NBR (nitrile) used in many coupling systems.

2.12 Radiant heat: quick connect couplings can be heated to destruction or loss of sealing without contact by such nearby items as hot manifolds or molten metal. The same heat source may then initiate a fire. This can occur despite the presence of cool air around the quick connect couplings.

2.13 Welding and brazing: heating of plated parts, including quick connect couplings and port adapters, above 450 °F (232 °C) such as during welding, brazing, or soldering may emit deadly gases and may cause coupling seal damage.

3.0 INSTALLATION INSTRUCTIONS

3.1 Pre-installation inspection: before installing a quick connect coupling, visually inspect it and check for correct style, body material, seal material, and catalogue number. Before final installation, coupling halves should be connected and disconnected with a sample of the mating half with which they will be used.

3.2 Quick connect coupling halves from other manufacturers: if a quick connect coupling assembly is made up of one Parker RectusTema half and one half from another manufacturer, the lowest pressure rating of the two halves should not be exceeded.

3.3 Fitting installation: use a thread sealant, when assembling taper pipe thread joints in quick connect couplings. Be sure the sealant is compatible with the system fluid or gas. To avoid system contamination, use a liquid or paste type sealant rather than a tape style. Use the flats provided to hold the quick connect coupling when installing fittings. Do not use pipe wrenches or a vice on other parts of the coupling to hold it when installing or a removing fittings as damage or loosening of threaded joints in the coupling assembly could result. Do not apply excessive torque to taper pipe threads because cracking or splitting of the female component can result.

3.4 Caps and plugs: use dust caps and plugs when quick connect couplings are not coupled to exclude dirt and contamination and to protect critical surfaces from damage.

3.5 Coupling location: locate quick connect couplings where they can be reached for connection or disconnection without exposing the operator to slipping, falling, getting sprayed or coming in contact with hot or moving parts.

3.6 Hose whips: use a hose whip (a short length of hose between the tool and the coupling half) instead of rigidly mounting a coupling half on hand tools or other devices. This reduces the potential for coupling damage if the tool is dropped and provides some isolation from mechanical vibration which could cause uncoupling.

4.0 MAINTENANCE INSTRUCTIONS

4.1 Even with proper selection and installation, quick connect coupling life may be significantly reduced without a continuing maintenance program. Frequency should be determined by the severity of the application and risk potential. A maintenance program must be established and followed by the user and must include the following as a minimum:

4.2 Visual inspection of quick connect couplings: any of the following conditions require immediate shut down and replacement of the quick connect coupling:

- Cracked, damaged, or corroded quick connect couplings parts.
- Leaks at the fitting, valve or mating seal.
- Broken coupling mounting hardware, especially breakaway clamps.

4.3 Visual inspection all other:

- Leaking seals or port connections.
- Excess dirt build-up on the coupling locking means or on the interface area of either coupling half.
- Defective clamps, guards, and shields.
- System fluid level, fluid type and any entrapment.

4.4 Functional test: operate the system at maximum operating pressure and check for possible malfunctions and freedom from leaks. Personnel must avoid potential hazardous areas while testing and using the system.

4.5 Replacement intervals: specific replacement intervals must be considered based on previous service life, government or industry recommendations, or when failures could result in unacceptable downtime, damage or injury risk. See instruction 1.2 above.

We are Developing a Cool Solution!

Quick connect coupling system – efficient components in the area of thermal management

“Plug & Play” – Customized Systems

We offer engineering support to our customers for the co-development of the complete cooling installation. A special care is accorded to the pressure drop for energy saving and to assure the optimal temperature management.

We propose a complete 100% tested solution integrating our products, between the chiller to the component to be cooled.

Our solutions include:

- **Manifolds** – several materials available
- **Couplings or cartridges** – from 3mm ID to 25 mm ID available in different materials and seals
- **Hose assemblies** – including Push-lok (hose barb) end connections for an optimal number of components
- **Bleeding valves, flow regulators, etc.**
- **Pressure and flow sensors**
- **Others...**

Our support:

-  • **Co-design of your cooling system**
-  • **Mechanical, thermal & flow simulation**
-  • **Building sample & prototype**
-  • **Laboratory validation**
-  • **Tightness test 100% serial parts**
-  • **Packaging optimization**

Information Technologies

Processors (microprocessors) generate waste heat during operation. This results in overheating of the unit, which can cause malfunction even to the point of destruction of components.

A cooling system is then mandatory to guarantee the rapid dissipation of the waste heat.

Small dissipation areas and high temperatures demand optimized and highly efficient solutions. As water is 10 times more efficient than air, we provide support to our customers to build complete systems for water cooling for high performance computers, data Centers, microelectronics and telecommunication applications.

Energy Management

Our knowledge in the use of quick connect couplings in the area of solar and wind energy allows the development of bespoke solutions for everything to do with the subject of efficient cooling circuits. For example, intelligent solutions are vital because of the constantly improving performance of the new generation of energy

production plants based on high-performance cooling circuits with liquid.

Here, our systems are optimally geared to the parameters of pressure, flow and temperature. As the systems are often used in salty sea air, corrosion-resistant materials are essential.

Mobile & Transportation

Rapidly increasing flows of goods and further increases in mobility demand extremely reliable and efficient vehicle concepts.

Here, the cooling of diesel-powered and electrically driven rail vehicles is highly important, and we provide light weight couplings and connection products adapted

to this application. More recently the environmental care drives more and more to the usage of electrical vehicles and ships. Our products are part of the systems built for the liquid cooling of the batteries.

Industrial Applications

From the individual machine to production lines and high-performance lasers, cooling is present in different industries.

Quick connect couplings are used in liquid cooling systems both for cooling tools in the production process and for the machine itself.

Therefore, Parker provides solutions for liquid cooling and tempering for all types of industries, as semiconductors, laser projectors, plastic industry, electronics (inverters, converters), etc.

Others

Based on more than 60 years experience, our products are designed to operate for all kind of thermal management applications. We will be happy to support for the development of your system whatever would be the sector of industry and design the future together.

Please consider our security advices on the pages 14/15

Applications Area

Technical Description

The NSI are dry-break couplings with flat face valves. The compact design makes them suitable for reduced spaces. Coupling system with two-hand operation, i.e. both hands are required when connecting/disconnecting.

Push to connect version available on request: NSP series

Working Temperature

-20°C up to +200°C (FKM) depending on the medium. Other seals materials are available on request.

Max. Working Pressure*

20 bar

* maximum static working pressure with design factor 4 to 1.

Advantages

- No spillage during connection/disconnection
- Low pressure drop
- Advanced internal design for cooling applications
- Can be used either with water or heat transfer oils
- Excellent resistance to vibrations and mechanical stresses

Material

Coupling: Brass/Stainless Steel

Plug: Brass/Stainless Steel

Seals: FKM or EPDM

Other materials available on request.

Applications

- Molding
- Electronic cabinets
- Laser
- Converters
- Radar, etc.
- Computers and telecommunications

Applications Area

Technical Description

The NSE are dry-break couplings with flat face valves. The compact design makes them suitable for reduced spaces when high flow is needed. Coupling system with two-hand operation, i.e. both hands are required when connecting/disconnecting.

Working Temperature

-20°C up to +200°C (FKM)
depending on the medium.

Other seals materials are available on request.

Screw to connect version available on request
(easy connection under residual pressure).

Advantages

- High flow with low pressure drop
- No spillage during connection/disconnection
- Specific design for cooling applications
- Reduced dimensions compared to flow capacities

Max. Working Pressure*

15 bar

* maximum static working pressure
with safety factor 4 to 1.

Material

Coupling: Stainless Steel

Plug: Stainless Steel

Seals: FKM

Applications

- Molding
- Electronic cabinets
- Laser
- Converters
- Radar, etc.

Technical Description

Minimal fluid loss during disconnection. NSA couplings have minimal pressure drop and no inclusion of air or dust during connection.

Working Temperature

-50°C up to +175°C (Fluorosilicone) depending on the medium.

Other seals materials are available on request.

Advantages

- No spillage during connection/disconnection
- Light weight due to aluminium construction
- Push-Lok connection for fast assembly

Max. Working Pressure

20 bar

Material

Coupling: Anodized Aluminium

Plug: Anodized Aluminium

Seals: Fluorosilicone

Applications

- Cooling of onboard electronic equipment, engines and batteries
- Cooling of converters, data centers, military equipment and medical imaging equipment

6600-Series

Medium Pressure

Technical Description

The couplings of the 6600 series meet the requirements and dimensions of the ISO 7241-1 A standard.

Advantages

NBR seals and back-up ring in PTFE to withstand flow surges at high flow rates. Single acting sleeve. Connection and disconnection are possible by pulling the sleeve. Poppet valving. Chrome 6 free plated steel.

Applications

- Used for a wide range of agricultural applications
- Mobile and construction equipment
- In-plant machinery including hydraulic power units and hand tools

Working Pressure

1/4"	350 bar
3/8"	280 bar
1/2"	280 bar
3/4"	280 bar
1"	280 bar

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

2000-Series

Medium Pressure

Technical Description

Meets the requirements of ISO 7241-1-A. Modular construction: broad choice of end configurations (variety of threads - BSPP and metric). Two valve options: Poppet or ball valving. Push-Pull connection- / disconnection.

Advantages

Can be connected with other products complying with the same standard. NBR seals and back-up ring in PTFE to

withstand flow surges at high flow rates. Double acting sleeve (Push-Pull). Ball or three-part poppet style valving with a molded shaped seal to prevent seal washout at high flow rates. Chrome 6 free plating.

Applications

- Used for a wide variety of agricultural applications
- Mobile and construction equipment
- Industrial equipment

Working Pressure

Poppet valve
3/8" 300 bar
1/2" 250 bar
Ball valving
1/2" 210 bar

Working Temperature

-25°C up to +110°C (NBR)
depending on the medium.

Applications Area

Material Coupling	Standard
Valve Body	Steel, silver plated
Sleeve	Steel, hardened, silver plated
Back-up Ring	Steel
Valve	Steel, silver plated
Springs	Steel
Locking Balls	Steel
Seals	NBR
Valve Holder	Steel
Back Body	Steel, silver plated
Material Plug	Standard
Plug Body	Steel hardened, silver plated
Valve	Steel, silver plated
Springs	Steel
Seals	NBR
Valve Holder	Steel, silver plated

Flow Capacity with Oil with Viscosity of 43cSt at 38°C as per ISO 7241/2-2000

ISO A-Profile

RSD-Series

Medium Pressure

Technical Description

The RSD series has been manufactured according to the regulations and dimensions of the standard specification ISO 7241-1 A series and can be connected with other series complying with the same standard.

Advantages

Our one hand operated push-pull version serve to prevent leakage and destruction of the hydraulic hoses by automatic disconnection in case of accidental traction on the hose. The integrated detent system prevents circuit shut off in back-flow condition (> 240 l/min - direction male to female). The connection can be done under full system pressure in the plug.

Working Pressure

See charts.

Working Temperature

-30°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Material Coupling	Standard

2 1/2"	70 bar	-	55 bar

Technical Description

The 60 series plug profiles conform to ISO Standard 7241-1 series B and are compatible with other series complying with the same standard.

Advantages

A poppet with crimped seal assures a maximum sealing at low flow rates and prevents seal washout at high flow rates. A large number of locking balls distribute the work load evenly while providing alignment for the two parts of the coupling. Steel versions feature PTFE back-up ring which prevents seal damage for high pressure applications. Brass couplers have a double O-ring seal for redundancy in low pressure and vacuum applications.

Sleeve-Lock:

60 series couplers are available with safety locking sleeves. Please add the suffix **SL** to the part number, e.g. **H3-62-SL**.

Working Temperature

-40°C up to +110°C (NBR)
-20°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Heavy Duty Nipples

Parker 60 series heavy duty nipples are recommended for extended life in applications where high cycle rates and pressure surges are encountered. Machined from high tensile steel and specially hardened.

To specify a heavy duty nipple, add the prefix **HD** to the steel series part number, thus:
HDH2-63.

Applications

- Semiconductor industry, steel manufacturing
- Pneumatic and hydraulic hand tools
- Food and bottling industry
- Boating, shipbuilding and offshore industry
- Pharmaceutical industry, laboratories
- Transport
- Power generation plants, hydroelectric power stations

Body Size

1/4" up to 1"

ISO B-Profile

Tema IB-Series

Medium Pressure

Applications Area

Technical Description

The Tema IB series plug profiles conform to ISO Standard 7241-1 series B and are compatible with other series complying with the same standard. To optimize performance and corrosion resistance the female is made from brass and the male hardened steel.

Advantages

Option with pressure eliminator function allows for effortless connection with static and residual pressure, up to operating pressure. It is available in the IB series for plugs and couplings. Option with heavy duty sleeve gives longer life time in very tough applications.

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR)
-25°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Available Valves

Material Coupling	Standard / Pressure Eliminator
Coupling Body Size 1/4" to 1/2"	Brass, nickel and chrome plated
Coupling Body Size 3/4" to 1"	Steel zinc plated, passivated, sealed
Sleeve Size 1/4"	Brass, nickel and chrome plated
Sleeve Size 3/8" to 1"	Steel zinc plated, passivated, sealed
Valve	Brass
Springs	AISI 301
Locking Balls	AISI 420 C
Seals	NBR/FKM
Valve Holder (up to 100°C)	Zinc casting
Valve Holder (over 100°C)	Brass
Material Plug	Standard / Pressure Eliminator
Plug Body	Steel hardened, zinc plated, passivated, sealed
Valve	Brass
Springs	AISI 301
Seals	NBR/FKM
Valve Holder (up to 100°C)	Zinc Casting Size 3/8" & 1/2", Brass Size 1/4", 3/4", 1"
Valve Holder (over 100°C)	Brass

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000

Applications Area

New version coming. The FEM series will be upgraded and improved (starting with 3/8", 1/2", 3/4" sizes and variants). Please see flyer 3800-FEM-Series-UK for updated versions.

Technical Description

The FEM, FEC and IF series plug profile are produced according to ISO Standard 16028 and are compatible with other series complying with the same standard. These couplings offer a leakage free disconnection – mini-mal oil loss during uncoupling. Thanks to the valve design, the coupling has a minimum pressure drop, and thus achieves maximum cost-effectiveness. Exists in standard version (steel) and stainless steel.

Advantages

- Can be operated with use of one hand.
- Safety locking feature as standard to prevent unintentional uncoupling.
- FEC with the pressure eliminator enable effortless connection under static pressure (up to rated working pressure).
- FEMP and FECP with push-pull features is suitable for multi-plates or when coupling is fixed on an application.

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR)
-25°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Available Valves

Thread Body	Steel	Steel	AISI 316

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000

— Standard FEM
 - - - Both side pressure eliminator
 - - - Couplings side pressure eliminator
 - - - Plug side pressure eliminator
 - - - One side pressure eliminator
 (No difference in pressure drop / flow rate for the coupling and plug)

Tema Profile

T-Series

**Technical Description**

The TEMA Standard Series is characterised by a low pressure drop and maximum flow capacity. The coupling system is available as double shut-off or straight through version. The 2500 can be used also as a single shut-off version.

Super Nipple

Increased hardening for better wear resistance

Advantages

- High operating pressure.
- Compact dimension.
- Due to the Pressure Eliminator version for coupling and plug the connection is possible up to the operating pressure.
- Double safety through a double O-ring seal.
- A safety locking sleeve prevents unintentional disconnection (except series 2300).

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR)
-25°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Available Valves**Applications Area**

Material Coupling	Standard / Pressure Eliminator	Stainl. Steel / Press. Eli.	High Press. Water (3/8")
Coupling Body	Brass, nickel plated chromated Steel for the 15000 and 20000 sizes	AISI 316	Brass, chromated
Sleeve	Steel hardened, zinc plated, passiv., sealed	AISI 316	Brass, chromated
Locking Ring	Brass, zinc-iron coated, black passiv., sealed	AISI 316

Tema Profile

TH-Series

Applications Area

Body Size	Bursting Pressure connected
1/2"	> 1200 bar
3/4"	> 1200 bar
1"	> 1200 bar

Technical Description

The TH series is a further development of the standard hydraulic coupling, with some new materials to stand up to heavy conditions. The body of the coupling is made of steel so that the coupling functions reliably even when subject to substantial lateral forces and high impulses.

Super Nipple

Increased hardening for better wear resistance

Advantages

- High flow rate – minimum pressure drop.
- Twice as safe through double sealing.
- Safety closing ring prevents unintentional uncoupling.
- Maximum protection against corrosion.
- Small dimensions.
- Pressure eliminator for coupling and plug available. Possible to connect up to working pressure.

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR)
-25°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Available Valves

Material Coupling	Standard / Pressure Eliminator
Coupling Body	Steel, zinc plated, passivated, sealed
Sleeve	Steel hardened, zinc plated, passivated, sealed
Locking Ring	Brass, zinc-iron coated, black passivated, sealed
Valve	Brass
Springs	AISI 302
Locking Balls	AISI 420 C
Seals	NBR/FKM
Valve Holder	Brass, hard-drawn
Plug	Standard / Pressure Eliminator
Plug Body	Steel hardened, zinc plated, passivated, sealed
Valve	Brass
Springs	AISI 301
Seals	NBR/FKM
Valve Holder	Brass, hard-drawn

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000

3/4" > 1500 bar

1" > 1100 bar

Applications Area**Technical Description**

The coupling system of the FF series has double shut-off, dry break and single-handed operation. During disconnection there is no oil loss, and during coupling there is no inclusion of air into the system.

Advantages

- Dry break quick connect coupling.
- With minimum pressure drop.
- Single-handed operation.
- No oil loss during disconnection.
- A safety closing ring prevents unintentional disconnection.
- Twice as safe through double sealing.
- Also available with pressure eliminator, i.e. connection is possible under static/residual pressure up to working pressure.

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR)
-25°C up to +200°C (FKM)
depending on the medium.
Special seals are available on request (see page 6).

Available Valves

Material Coupling	Standard / Pressure Eliminator
Coupling Body	Steel, nitrocarburizing
Sleeve	Steel hardened, zinc plated, passivated, sealed
Locking Ring	Brass, zinc-iron coated, black passivated, sealed
Valve	Steel, zinc plated, passivated, sealed
Springs	AISI 301
Locking Balls	AISI 420 C
Seals	NBR
Valve Holder	Steel, yellow zinc plated, sealed
Thread Body	Steel, zinc plated, passivated, sealed
Plug	Standard / Pressure Eliminator
Plug Body	Steel hardened, zinc plated, passivated, sealed
Valve	Steel, nitrocarburizing
Springs	AISI 301
Seals	NBR/PUR
Valve Holder	Brass, hard-drawn
Thread Body	Steel, zinc plated, passivated, sealed

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000

Medium Pressure

Technical Description

Standard design with ball locking mechanism for high pressure applications. Rugged construction.

Advantages

Body size 1/2" and above feature PTFE back up ring which prevents seal washout at high flow rates. Solid steel bar-stock construction: induction-hardened for a coupling with maximum resistance to damage to hydraulic and mechanical shock and brinelling.

A poppet with a crimped seal assures a maximum sealing at low flow rates and prevents seal washout at high flow rates.

Applications

- Mobile equipment
- Industrial maintenance

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Parker Profile

ST-Series

Medium Pressure

Technical Description

Non-valved couplings. Maximal flow. Minimal pressure drop. Easy cleaning. This series is also manufactured as an alternative in steel and AISI 316 material.

Advantages

No valving allows minimal pressure drop, maximal flow and easy cleaning. The ball locking mechanism with eight balls to distributes the work load assures low wearing and good alignment of the couplings. High resistance to brinelling due to heat treated nipples.

Applications

- Food industry
- High pressure water and steam washers
- Dye transfer lines
- Mold coolant lines
- Carpet cleaners

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Sleeve-Lock

ST series couplers can be furnished with locking sleeves. Place suffix letters **SL** (Sleeve-lock) after regular catalog numbers. Example: **SST-4M-SL**

3/4"	0,150 ml	0,050 ml
1"	0,220 ml	0,070 ml

Technical Description

The NS series is unique among non spill types in having a recess on the female side to help locate the male during connection, making the process easy even in „blind“ conditions. Minimal fluid loss during disconnection. NS couplings have minimal pressure drop and minimal inclusion of air or dust during connection.

Advantages

Push to connect system: Push on the male tip to connect. Flush-faced poppet valve for reduced spillage during connection/disconnection. The seal is crimped to prevent seal washout at high flow rates. Solid steel barstock construction: induction-hardened for a quality coupling with maximum resistance to damage from hydraulic and mechanical shock and brinelling. A safety sleeve lock prevents accidental disconnection. Sleeve is rotated to the stop to engage the lock.

Applications

- Maintenance of high-voltage power transmission lines
- Construction, railway maintenance and mining industry
- Inplant use where oil spillage can create a hazard
- Overhead bucket hoists

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Parker Profile

NSR-Series

Medium Pressure

Technical Description

Dry-Break coupling system for Railway applications with a minimal pressure drop.

The NSR series is certified according to the shock and vibration test DIN EN 61373:1999 (railway applications, rolling stock equipment) as well as DIN EN 60068-2-64 (vibration, broad-band random) and DIN EN 60068-2-27 (shock).

Advantages

Dry-break poppet valve for reduced spillage during connection/disconnection. When connected, the external seal prevents any ingress of contaminants (brake dust, road salt, water). Hardened stainless steel construction.

Working Temperature

-54°C up to +80°C (NBR) (connected)
-40°C up to +60°C (NBR) (for the disconnection) depending on the medium.

Special seals are available on request.

Applications Area

Dry-Break

Max. Working Pressure

160 bar

Material

Coupling: Stainless Steel

Plug: Stainless Steel

Seals: NBR

Applications

- Hydraulic Braking Systems

Snap-tite Profile

H-Series

Medium Pressure

Technical Description

Parker Snap-tite H series is a general purpose hydraulic and pneumatic quick coupling.

Advantages

- Wide range of sizes, materials and end configurations
- Available in single shut-off, double shut-off or straight through versions
- Also available in Aluminium

Applications

- Agriculture
- Gas meters
- Drill clamps
- Chemical plants
- Loading arms
- Production lines

Working Pressure

See charts.

Working Temperature

- 35°C up to +120°C (NBR)
 - 26°C up to +204°C (FKM)
 - 56°C up to +120°C (EPR)
- depending on the medium.

H-Series is also available with FKM or EPR seal.

Add the suffix **V** for FKM and the suffix **E** for EPR to the part number, e.g. **VHC4-4FV**.

Snap-tite Profile

71-Series

Medium Pressure

Technical Description

Parker Snap-tite 71 series couplings are designed for working pressures up to 690 bar.

Available in a variety of materials and with a wide range of body sizes.

Advantages

- Flush face/Non-spill
- Push-to-connect
- Large flow chambers resulting in superior flow and pressure drop
- Optional sleeve lock
- Heavy duty construction

Applications

- Industrial Hydraulic lines
- Offshore drilling
- Pumps
- Test points
- Chemical Plants

Working Pressure

See charts.

Working Temperature

- 35°C up to +120°C (NBR)
 - 26°C up to +204°C (FKM)
 - 56°C up to +120°C (EPR)
- depending on the medium.

71-Series is also available with FKM or EPR seal.

Add the suffix **V** for FKM and the suffix **E** for EPR to the part number, e.g. **71-3C4-4FV**.

Tema Profile

SCFF-Series

Medium Pressure

**Technical Description**

Heavy duty Screw-to-Connect type of couplings for demanding applications with flat face valves to avoid spillage and protect the environment. Best in class flow and burst values, integrated swivel function. Quicker connection with double started ACME thread and available with pressure eliminator in plug on request.

Advantages

- Good resistance to vibrations and mechanical stress
- No fluid loss during connection and disconnection
- Efficient and safe
- Quick and easy connection
- Locking system prevents accidental disconnection
- Connectable up to full working pressure with pressure eliminator

Working Pressure

3/8" up to 550 bar
1/2" up to 500 bar
3/4" up to 500 bar
1" up to 420 bar

Working Temperature

-30°C up to +100°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Applications Area

Material Coupling	Standard / Pressure Eliminator
Coupling Body	Steel, ZnNi plated
Sleeve	Steel, ZnNi plated
Back-up Ring	PTFE
Valve	Steel, ZnNi plated
Springs	AISI 301
Swivel Balls	Steel
Seals	NBR
Valve Holder	Steel
Plug	Standard / Pressure Eliminator
Plug Body	Steel, ZnNi plated
Valve	Steel, ZnNi plated
Springs	AISI 301
Seals	NBR/PUR
Valve Holder	Steel, ZnCr3 plated

Screw-to-Connect

QHPA-Series**Technical Description**

Screw-to-connect type of coupling according to ISO 14541 for difficult applications. Rugged, modular construction in steel, working up to 450 bar.

Advantages

Self locking threads and external seal to prevent accidental disconnection. Connectable under residual pressure up to 50 bar. NBR seals and back-up ring in PTFE to withstand pressure impulses.

Sleeve mounted on the male tip to protect the sealing area. Three-part poppet style valving with a molded shaped seal to prevent seal washout at high flow rates.

Applications

- Agricultural and mobile equipment
- Rock hammers
- Forestry equipments

- Snow groomers
- Excavators

Working Pressure

3/8"	450 bar
1/2"	400 bar
3/4"	380 bar
1"	370 bar
1 1/4"	300 bar

Working Temperature

-25°C up to +110°C (NBR) depending on the medium.

Material Coupling	Standard
Valve Body	Steel, silver plated, ZnNi plating for 3/4" size
Back Body	Steel, silver plated, ZnNi plating for 3/4" size
Back-up Ring	PTFE
Valve	Steel, silver plated, ZnNi plating for 3/4" size
Springs	Steel
Seals	NBR
Valve Holder	Steel
Material Plug	Standard
Plug Body	Steel, silver plated, ZnNi plating for 3/4" size
Valve	Steel, silver plated
Springs	Steel
Seals	NBR
Valve Holder	Steel, silver plated, Brass for 3/4" size
Sleeve	Steel, silver plated, ZnNi plating for 3/4" size

Screw-to-Connect

75-Series

Medium Pressure

**Technical Description**

Parker Snap-tite 75 series couplings are designed for working pressures up to 345 bar. Screw-to-connect design available in steel or stainless steel.

Advantages

- Robust coupling for use in high pressure hydraulic service
- Connectable under residual pressure
- Wide range of sizes
- DBP version is "Fire Safe" rated to API 16D

Applications

- Cranes
- Power tongs
- Horizontal boring
- Dewatering
- Oilfields
- Offshore drilling

Working Pressure

See charts.

Working Temperature

- 35°C up to +120°C (NBR)
 - 26°C up to +204°C (FKM)
 - 56°C up to +120°C (EPR)
- depending on the medium.

75-Series is also available with FKM or EPR seal.

Add the suffix **V** for FKM and the suffix **E** for EPR to the part number, e.g. **75C12-12VW**

Medium Pressure

**Technical Description**

Screw-to-connect coupling. Connection and disconnection possible with full system pressure. Compatible with a broad range of media. Limited fluid spillage during disconnection.

Advantages

Bonded valve seal permits full pressure connect and disconnect without seal washout. Heavy-duty wing nut, ruggedly built, specifically to withstand the hammer blows, used to tighten and loosen this coupler. Flush-faced poppet valve

for reduced spillage during disconnection. Connection indicator: visual check for complete connection of the couplings.

The flange is designed to give a positive "no-slip" bulkhead mounting to reduce down-time.

Applications

- Dump trailers: to connect the tractor to wet-line hydraulic systems
- Connection of hydraulic lines on oil field equipment like power tongs, swivels and mobile drilling rigs.
- Submersible pumps, engine test stands
- Applications where heavy-duty couplings are required

Working Temperature

-40°C up to +110°C (NBR) depending on the medium.

Screw-to-Connect

FET-Series

**Technical Description**

Screw-to-connect type of couplings for difficult applications. Working pressure up to 415 bar. Flat face valves to avoid fluid loss and protect environment.

Advantages

- No fluid loss during connection/disconnection
- Good resistance to vibrations and mechanical stresses due to screw connection
- Connectable under residual pressure up to 345 bar

Applications

- Mobile and construction equipment: cranes, drilling machines, excavators, hammers, thumbs
- Oil field: wellhead drives

Working Pressure

See charts.

Screw-to-Connect

59-Series

Medium Pressure

**Technical Description**

Parker Snap-tite 59 series is ideal for high impulse applications that require the security of a threaded connection and the ability to connect and disconnect under residual pressure.

Advantages

- Robust ACME thread has a double start feature and allows full connection to be quickly completed in 2 1/2 turns.
- Minimal resistance for easy connection

- Connect with up to 345 bar residual pressure
- Disconnect with up to 172 bar residual pressure
- Visual confirmation when full connection is complete

Applications

- Mobile drill rigs
- Oil field equipment
- Umbilical lines
- High impulse mobile circuits

Technical Performance Data

Body Size inch	Temperatur Range	Maximum operating pressure
1/2"	-30°C up to +110°C	250 bar

Top Connector (Coupling Plate)

This top connector unit includes the top casting and automatic protective cover, 4 to 7 female quick couplings and a complete locking system. In the most common version with 7 lines, the top connector is also equipped with a 6 line male electrical connector as a standard feature.

	1/2"
A	120 mm
B	145 mm
C	160 mm
D	210 mm
E	Ø 30 mm

Base Connector (Plug Plate)

This base connector unit includes the base casting and automatic protective cover, 4 to 7 male quick couplings and the positioning pins. Also included are an adaptor and a plastic hose to drain oil. In the most common version with 7 lines, the base connector is also equipped with a 6 line male electrical connector as a standard feature.

	1/2"
A	109 mm
B	170 mm
C	70 mm

Technical Description

The couplings meet the requirements of ISO 7241-1 Series A. Possible to connect 4, 5, 6 or 7 hydraulic lines simultaneously. No coupling misconnection or accidental disconnection. Using a standard interface will still allow end users to connect their standard quick coupling equipped implements. In the version with seven lines (MACH 7), the base connector is equipped with an electrical connector as standard feature, which is an option on the MACH 4, 5 and 6.

Advantages

Individual ball locking system and central cam locking mechanism: a simple movement enables to connect all the hydraulic lines. Three part poppet style valving with a molded shaped seal to prevent seal washout at high flow rates. Possible to connect with two lines under 200 bar, if other lines are not under pressure. Easy and fast connection and disconnection of implements or tooling.

Applications

- Agricultural (front loaders, hedge cutters,...)
- Road service vehicles (road systems lorries, road sweepers, snowploughs,...)
- Industrial Applications

Working Pressure

max. 250 bar

Working Temperature

-30°C up to +110°C (NBR) depending on the medium.

Flow Capacity with Oil with Viscosity of 43cSt at 38°C as per ISO 7241/2-2000

Connecting box (Coupling Plate)

Complete unit including the base connector unit, its dust cover, a lever acting as a central locking device and 2 female couplings.

Plug Plate

Complete unit including the connecting plug and 2 male tips, which meet the requirements of ISO 7241-1-A.

Technical Description

The couplings meet requirements of ISO 7241-1 Series A. Possibility to connect 2 hydraulic lines simultaneously. No coupling misconnection or accidental disconnection. Possibility of connecting under pressure up to 250 bar in one hydraulic line only.

Advantages

Central came locking system. Poppet style valving with a molded shaped seal to prevent seal washout at high flow rates.

Applications

- Agricultural (front loaders, hedge cutters,...)
- Road service vehicles (road systems lorries, road sweepers, snowploughs,...)
- Industrial Applications

I-Connect 2+®**Technical Description**

Multiple connector system with four lines for various hydraulic applications. Plates are made of aluminium for a light weight. Dust caps made of thermoplastic to protect the disconnected couplings against dust and dirt from the environment.

The I-Connect 2+ Multi-Coupling system is a registered trademark.

Advantages

- Multiposition lever to adapt to the customer needs
- Safety locking
- Light weight
- Versions with couplings with pressure eliminator available as an option
- 3/8" & 1/2" couplings can be mounted on the same plate

Applications

- Agricultural (can be mounted directly on standard front loader valves, hedge cutters, ...)
- Road service vehicles (roadsystems lorries, road sweepers, snowploughs,...)
- Industrial Applications

Working Pressure

250 bar

Working Temperature

Technical Description

Multiple connector system with locking lever and safety locking. Original Tema plug-profile with spill-proof flat face design. Coupling body/plug fitted with high-flow valve system. Adjustable angle on the lever 0 - 180° in steps of 30°.

Pressure Eliminator

All plugs are fitted with pressure eliminators to eliminate residual pressures up to maximum working pressure on the plug side (maximum 50 bar on the coupling side).

7-pole Electrical Connection

- Male part (coupling plate)
- Cable: 7 x 1,5 RDOE 5m
- Female part (plug plate)
- Cable: 7 x 1,5 RDOE 3m
- Not IP classified
- Contact block: NBR
- Connector: (pins and casing) bronze, silver plated
- Electric connection box: Thermoplastic (POM)
- Pull relief (cable): PA/NBR
- Max. voltage: 24 V
- Max. current: 16 A*

* For return-current through cable, the total permitted current through the connector is maximum 16 A.

Working Temperature

-30°C up to +100°C (NBR/PUR)

Working Pressure

Max. pressure range:
350 bar (design factor 4:1)

Attention:

To retain the design factor, only half the number of couplings of one size may be pressurised simultaneously.

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000**Hydraulic Flow:**

3/8" – 54 l/min (3 bar press. drop)
1/2" – 97 l/min (3 bar press. drop)

¹⁾ with electrical plug

Technical Description

Multiple connector system with locking lever and safety locking. Original Tema plug-profile with spill-proof flat face design. Coupling body/plug fitted with high-flow valve system.

Working Pressure

Max. pressure range:
350 bar (design factor 4:1)

Attention:

To retain the design factor, only half the number of couplings of one size may be pressurised simultaneously.

Pressure Eliminator

All plugs are fitted with pressure eliminators to eliminate residual pressures up to maximum working pressure on the plug side (maximum 50 bar on the coupling side).

7-pole Electrical Connection

- Male part (coupling plate)
- Cable: 7 x 1,5 RDOE 5m
- Female part (plug plate)
- Cable: 7 x 1,5 RDOE 3m
- Not IP classified
- Contact block: NBR
- Connector: (pins and casing) bronze, silver plated
- Electric connection box: Thermoplastic (POM)
- Pull relief (cable): PA/NBR
- Max. voltage: 24 V
- Max. current: 16 A*

* For return-current through cable, the total permitted current through the connector is maximum 16 A.

14-pole Electrical Connection

- Delivery without cables
- Protection category IP 67 (coupled)
- Screwed conductor connector: 0,5 – 1,5 mm²
- Pins and sleeves: copper coated
- Elect. junction box: Aluminium
- Traction relief: PA/NBR 9 – 16 mm
- Max. voltage: 48 V
- Max. current: 10 A per core

Working Temperature

-30°C up to +100°C (NBR/PUR)

Flow Capacity with Oil with Viscosity of 32cSt at 40°C as per ISO 7241/2-2000

Hydraulic Flow:

3/8" – 54 l/min (3 bar press. drop)
1/2" – 97 l/min (3 bar press. drop)
3/4" – 240 l/min (3 bar press. drop)

Nominal Diameter in mm:

3/8" – 10
1/2" – 12,5
3/4" – 19

Material

Coupling-/Plug plates	Aluminium, anodised-blue
Support Plate	Aluminium, anodised-blue
Protective Cap	Aluminium, anodised-blue, NBR-seal
Quick Connect Couplings/-Plugs	Steel, zinc-plated, passivated (Cr3+), movable sleeves made of stainless steel AISI 304
Seals	NBR/PUR; replaceable profile ring on plug side
Locking Mechanism	Steel, zinc-plated, passivated (Cr3+)
Locking Button	Aluminium, anodised-red
Blank Plug	Thermoplastics (POM)

	Coupling 1/2" long; all versions with 3/4" and C-line Compact 1/2" up to 3/4"	300	MF5010 P7-SP
	Locking Device	30	TM-219-SP
	Locking Device 4 x 3/8"	30	TM-231-SP
	Locking Button	30	TM-103-SP
	Lever socket	290	TM-261-SP
	Electrical closure, 14-pole	40	STA14S-SP
	Pressure screw	50	GN615KSNM8-SP
	Smalley ring	10	SW13R-SP
	Bushing	5	TM-187-SP

Body Size

1/4" and 3/8"

700 bar

3000-Series**Technical Description**

High pressure coupler up to 700 bar. Screw locking mechanism.

Advantages

- Screw type locking mechanism - high resistance to mechanical and hydraulic strengths.
- Ball or poppet valving configurations can be connected together with reduced impact on the flow capacities.

Applications

- Portable hydraulic rams
- Hydraulic jacks, rams and clamping devices
- Clamping hand tools
- Rescue equipment

Working Temperature

-30°C up to +110°C (NBR)
-30°C up to +80°C (Polyurethane)
depending on the medium.
Special seals are available on request (see page 6).

FF2500-Series

**Technical Description**

The coupling system of the FF series has double shut-off, dry break and single-handed operation. During uncoupling there is no oil loss, and during coupling there is no inclusion of air into the system.

Advantages

- Dry break quick connect coupling with minimum pressure drop.
- Single-handed operation.
- No oil loss during uncoupling.
- A safety closing ring prevents unintentional disconnection.
- Twice as safe through double sealing.
- Also available with pressure eliminator, i.e. connection is possible under static/residual pressure up to working pressure.

Working Pressure

See charts.

Working Temperature

-30°C up to +100°C (NBR) depending on the medium. Special seals are available on request (see page 6).

1000 bar

HP1000-Series

Technical Description

The Tema high pressure coupling was specially developed for use in industrial machinery, salvage devices and testing equipment. This series is galvanised and produced in steel. The plug part and the sleeve are hardened and galvanised in steel. The coupling can be supplied either with or without safety lock.

Advantages

- High flow as a result of optimised valve design.
- Additional plug sealing via polymer valve casing, to guarantee high reliability seals even with second-hand plugs.
- Tema high pressure couplings are supplied with dust caps inclusive!

Seals

Coupling: bonded seal washer
Plug: bonded seal or innercone

Working Pressure

1000 bar

Working Temperature

-30°C up to +100°C (NBR) depending on the medium. Special seals are available on request (see page 6).

1500 bar

HP1500-Series

Technical Description

The Tema high pressure coupling was specially developed for use in bolt tensioning equipment. This series is produced in steel. The plug bodies and the sleeves are black galvanised. The coupling can be supplied either with or without additional safety lock.

Advantages

- High flow as a result of optimised valve design.
- Additional plug sealing via polymer valve casing, to guarantee high reliability seals even with second-hand plugs.
- Tema high pressure couplings are supplied with dust caps inclusive!

Seals

Metal sealing cone threaded adapters/metal sealing cone adapters.

Adapters HP-Series

Technical Description

Range of adapters developed for HP1000 and HP1500 series. To achieve other thread ports then existing in the standard range.

Advantages

The adapters makes the HP series more flexible and easy to connect to different fittings and hose packages.

Seals

See chart.

1379 bar

77-Series

**Technical Description**

Parker Snap-tite 77 series is designed for working pressures up to 1379 bar. Available in stainless steel.

Advantages

- Drybreak with minimal fluid loss
- Wide range of end fittings
- Dog-lock mechanism preventing ball brinnelling
- Internal sleeve-lock as safety feature

Applications

- Hydraulic test stands
- Hydrotesting
- Offshore drilling & Production

Working Pressure

See charts.

Working Temperature

-35°C up to +120°C (NBR)
-26°C up to +204°C (FKM)
-56°C up to +120°C (EPR)
depending on the medium.

77-Series is also available with FKM or EPR seal.

Add the suffix **V** for FKM and the suffix **E** for EPR to the part number, e.g. **S77C4-4FV**.

3000 bar

73-Series**Technical Description**

Parker Snap-tite 73 series is designed for working pressures up to 3000 bar. Available in stainless steel.

Advantages

- Heavy duty construction for high pressures
- Positive locking collar to prevent accidental disconnection

Applications

- Waterjet
- Waterblast
- Oilfield injection
- High pressure test systems

Working Pressure

See charts.

Working Temperature

-26°C up to +204°C (FKM)
-56°C up to +120°C (EPR)
depending on the medium.

73-Series is also available with EPR seal.

Add the suffix **E** for EPR to the part number, e.g. **SV73C4-4FE**.

**Technical Description**

The design of the Tema System 100 allows the check of static and dynamic pressures as well as vacuum. With the integrated self-venting device (as standard), it is easy to evacuate any inclusions. This guarantees an accurate display of the measured value, especially with dynamic pressures. The measuring plugs are available with various connection options. They have very small dimensions and can be fitted very easily to the equipment. Thanks to the design and choice of materials, the plugs are maintenance-free. The measuring device with the pressure gauge is fitted with a Tema quick connect coupling. This guarantees coupling to the

measuring plugs in a matter of seconds. With the shut-off device in the plug and in the body of the coupling, the Tema System 100 allows a dry break, during coupling as well as during uncoupling. For measuring at a distance, a flexible extension cable is available; this can be coupled between the measuring plug and the measuring system. Thanks to its wide range of connections, the Tema System 100 is a versatile and flexible measuring system.

Maximum Working Pressure

Measuring plug 120: 400 bar
Other parts: 600 bar

Complete Hydraulic Set**System 100**

	Description	Part Number
The Tema System 100 Complete Set is delivered in a plastic case and contains the following parts: 1 piece measuring handle 101-2 and pressure gauge of your choice* 1 piece measuring plug 120 1 piece measuring cable 130, length 2,5 m, complete 1 piece adapter 135, G 1/4" i. x G 1/8" o. 1 piece adapter 136, G 1/8" i. x G 1/4" o. In the measuring case there is additional room for two further pressure gauges as well as an adapter 139. If two pressure gauges are required, the part number is, for example, 107-08 (Complete Set with one pressure gauge 0-250 bar and one pressure gauge 0-400 bar). * If measuring handle 101-21A is required instead of 101-2, this must be added to the order.	Complete set not including pressure gauge	101
	Complete set with 1 pressure gauge -1 to +1,5 bar	104
	Complete set with 1 pressure gauge 0 to +25 bar	112
	Complete set with 1 pressure gauge 0 to +60 bar	114-QC
	Complete set with 1 pressure gauge 0 to +250 bar	107-QC
	Complete set with 1 pressure gauge 0 to +400 bar	108
	Complete set with 1 pressure gauge 0 to +600 bar	109-QC

Measuring Plugs

Technical Description

Thanks to their advanced design, the measuring plugs are reliable components in our measuring device. Made of hardened steel. The measuring plugs are maintenance free and are designed for temperatures from -40°C up to +110°C. The integrated valve seals up to a 90% vacuum. All mechanical parts in the measuring plug are made of corrosion resistant materials. Two different type of sealing (see picture on the right side). Available with two different types of covering cap.

- Fully sealed
- Maintenance-free
- Metal-to-metal seal

Measuring Plug Accessories

System 100

Description	Part Number
Plastic cap made of soft PVC	125-QC
Metal cap with O-ring seal. Quick-lock type coupling on plug. Extra safety. Up to 750 bar.	126K
Quick connect coupling for measuring plug with integrated shut-off valve. Seal made of FKM. G 1/8 male thread.	150
Adapter coupling female thread G 1/4"	150-137

System 100

Pressure Gauge / Measuring Handle / Self-Venting Block

Pressure Gauge

- Filled with glycerine – suitable for temperatures to -40°C
- Special seal – quick change
- Measuring accuracy $\pm 1,6\%$
- Diameter 63 mm
- Pressure gauge connection G 1/4", male thread
- Scale with double graduation (MPa + bar)

Measuring Handle

Measuring handle 101-2 is used for low pressures up to max. 60 bar.

- System 100 – time-saving quick connect couplings
- Shut-off valve in coupling body and plug – dry break

Measuring handle 101-21A can be coupled even under full working pressure.

Self-Venting Block

In order to obtain exact measured values (particularly with dynamic pressure measurements), it is essential that there should be no air bubbles trapped between the measuring plug and the pressure gauge. This can be checked simply and effectively with the Tema 100 Measuring System, since the air bubbles can easily be removed. It is possible to vent the system at maximum working pressure by using the venting screw.

Pressure Gauge

	Self-venting block	101-3-QC

High-Pressure Hoses

Technical Description

Tema high-pressure hose – produced for measurements and mini-hydraulic systems. Exact selection of materials and production under strict control contribute to the satisfaction and reliable safety of the product. Max. working pressure 630 bar.

Material

Inner and outer hose:
high-quality POLYAMIDE
Pressure carrier: KEVLAR

Caution: If the hoses are to be used for compressed air, this must be mentioned in the order.

Advantages

- Remains flexible, even under full working pressure, thanks to its small external dimensions and a suitable choice of materials.
- Resistant to all mineral and most synthetic oils
- Resistant to ageing
- No increase in volume (no differences in measurements)
- Temperature range from -40°C up to +100°C

In order to achieve optimal durability, the hoses can be strengthened with a spring at each end. Add-on code "F" after the itemnumber of each connection.

Ordering example for a complete high-pressure hose

PJS Series

Technical Description

The PJ/PJS series was specially developed for hydraulic diagnosis. Using the PJS system, oil quality and oil pressure can be determined by extracting oil directly from the plug. The components are produced in steel, galvanised in the connection and conform to norm SAE J 1502.

The PJS plug can be used both to test the oil and to extract oil.

Advantages

The FlatFace design makes it easier to clean out dirt. Optimised oil intervals save time, labour and operating capital. The easy-grip, knurled locking sleeve makes coupling and uncoupling easy. Sampling also in working pressure circuits.

Working Pressure

See information below.

Technical Description

Diagnostic couplings provide easily accessible test points for performance testing of hydraulic and pneumatic systems. Easily incorporated into original equipment or retrofitted to existing circuits, PD plugs meet or exceed SEA J 1502 and ISO 15171-1 design and performance specification.

Advantages

- Carbon steel for couplers. High tensile steel for plugs.
- For water applications also available in brass on request.
- Ball locking mechanism.

- Flush-faced poppet valve for a minimal air inclusion when connecting, minimal fluid loss during disconnection and for an easy cleaning.
- The sealing and locking groove are induction hardened to resist mechanical abuse and brinelling, whilst avoiding toughness.
- A safety sleeve lock prevents accidental disconnection.
- Push-to-connect operation allows single handed operation when connecting the coupling.

Applications

- Industrial equipment
- Mobile equipment
- Agricultural equipment

Working Pressure

max. 420 bar

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Swivel Joints

DG-Series

**Technical Description**

Can be used in hydraulic systems where rotating connections are essential, for example on accessories with rotating movements. Depending on design, the body is made of brass (DG) or steel (KR) and the rotating axis of surface-purified/stainless steel. Maximum rotation speed: 60 r.p.m.

Advantages

- Rotating joints minimise the high wear to the hose, which occurs in hydraulic systems.
- Solid construction with two plain bearings (DG) or ball/roller bearings (KR).
- Suitable for combining with norm hydraulic components.

Working Temperature

-40°C up to +90°C (NBR) depending on the medium. Special seals are available on request (see page 6).

All KR swivel joints are only suitable for oil.

Accessories

Pressure Relief Valve

**Technical Description**

Produced for hydraulic systems where in line quick connect couplings are used. The system pressure built up between the hydraulic unit and the coupling would not allow mechanical coupling.

Advantages

The Pressure Relief Valve can be mounted directly in the main inflow line so that all downstream pipe or hose lines where quick connect couplings or plugs are installed at the ends can be depressurised.

Working Pressure

max. 250 bar

Working Temperature

up to max. +90°C depending on the medium. Special seals are available on request (see page 6).

¹ Pressure Relief Valve made of stainless steel with FKM Seals.

DT-Series

3/8" and 1 1/4"

Technical Description

Compact design, easy to plumb into tight circuits. Robust steel construction with various end fittings. The maximum operating pressure is 350 bar. Large range of end configurations. Zinc chromate exterior finish.

Advantages

- No internal gaskets or seals to wear out.
- The check valve body is shaped like an arrow to indicate flow direction.
- Heat treated poppet valve to resist damage from shocks and surges.
- One-piece body eliminates threads and seals that may be potential leak points.
- Compact design.
- Smooth flow stream: poppet spring is isolated from flow stream thus minimising turbulence.

Working Pressure

max. 350 bar

Working Temperature

-40°C up to +110°C (NBR) depending on the medium. Special seals are available on request (see page 6).

Standard Cracking Pressure:

0,35 bar

Other Options:

Cracking Pressure up to 14 bar in 0,35 bar increments are available on request. Please consult your Parker sales engineer.

For other threads, other sizes or other end configurations, please contact your Parker sales team.

Thermal Valves

Technical Description

Temperature responsive by-pass valve to modulate return line oil between tank and oil cooler. Available in 5 shift temperatures, 38°C to 82°C. Integral relief valve to dump excessive inlet pressures to the reservoir. Relief pressure settings available from 0.34 to 6,0 bar. 17 bar maximum operating pressure. Up to 227 l/m flow rates.

Advantages

Modulates fluid temperature either by shifting return line flow through the cooler, or by passing directly to the reservoir. Compact construction. 2 mounting holes, each of Ø 10,6 mm. Aluminium die-cast housing. 3 threaded ports for easy tubing. A built-in pressure relief function automatically relieves excess pressure to the reservoir, should the cooler become restricted and the resultant pressure drop become too high for the cooler circuit.

Applications

Ideally suited to hydrostatic drive circuits that require fast warm-up, controlled fluid temperatures and low return line-back pressure.

Working Pressure

max. 17 bar

Technical Performance

Material	Standard
Body	Aluminium
Valve	Different Materials

Hydraulic Brake Block

Technical Description

Parker Connector Block for trailer hydraulic brake is the ideal product to comply with Regulation (EU) No 167/2013. This regulation imposes for the components and separate technical units pulled by an agricultural tractor, to have 2 lines, with one dedicated to emergency (SL).

This product is made of an aluminium block, a nipple (ISO 5676) for CL line, a switch for SL connection detection, and a nipple (ISO 16028) for the SL.

Advantages

Switch isolated from environment (dust,...) and hydraulic circuit - means a longer lifetime. Compact & light solution. Different connectors possible (Amp superseal, deutch, ...). Detection of failure of the harness and switch (optional).

Applications

Hydraulic trailer braking

Working pressure

150 bar for control line (CL)
35 bar for Supplementary line

Working Temperature

-30°C up to +100°C

Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374
