WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyse all aspects of your application and review the information concerning the product or system in the current product catalogue. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, products features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

SALE CONDITIONS

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

Introduction to the European ATEX directive

Explosive atmospheres

Directive 94/9/EC defines an explosive atmosphere as a mixture of :

- a) **flammable substances** – gases, vapours, mists or dusts
 - b) with **air**
 - c) under specific **atmospheric conditions**
 - d) in which, after ignition has occurred, combustion spreads to the entire flammable mixture
- (NB: with regard to dust, it may be that not all dust is combusted after ignition has occurred)

An atmosphere with the potential to become an explosive atmosphere during operating conditions and/or under the influence of the surroundings is defined as a **potentially explosive atmosphere**. Products covered by directive 94/9/EC are defined as intended for use in potentially explosive atmospheres.

Harmonised European ATEX standard

The European Union has adopted two harmonised directives in the field of health and safety. The directives are known as ATEX 100a and ATEX 137.

Directive ATEX 100a (94/9/EC) lays down minimum safety requirements for products intended for use in potentially explosive atmospheres in European Union member states. Directive ATEX 137 (99/92/EC) defines minimum requirements for health and safety at the workplace, for working conditions and for the handling of products and materials in potentially explosive atmospheres. This directive also divides the workplace into **zones** and defines criteria by which products are **categorised** within these zones.

The table below describes the **zones** in an installation where there is a potential for explosive atmospheres. The **owner** of the installation must analyse and assess the area in which the explosive gas/dust mixture may occur, and if necessary must divide it into **zones**. This process of zoning then allows the correct plant and equipment to be selected for use in the area.

Zones		Presence of potentially explosive atmosphere	Type of risk
Gas G	Dust D		
0	20	Present continuously or for long periods.	Permanent.
1	21	Likely to occur in normal operation occasionally.	Potential.
2	22	Not likely to occur in normal operation but, if it does occur, will persist for a short period only.	Minimal.

The ATEX directive has been in force throughout the European Union since 1 July 2003, replacing the existing divergent national and European legislation relating to explosive atmospheres. Please note that for the first time, the directive covers mechanical, hydraulic and pneumatic equipment and not just electrical equipment as before.

With regard to the **machinery directive** 98/37/EC, note that a number of external requirements in 94/9/EC refer to hazards arising from potentially explosive atmospheres, where the Machinery directive only contains general requirements relating to explosion safety (Annex I 1.5.7).

As a result, directive 94/9/EC (ATEX 100a) takes precedence over the Machinery directive with regard to explosion protection in potentially explosive atmospheres. The requirements in the Machinery directive are applicable to all other risks relating to machinery.

In most cases full certification is not required, a much more simple "Risk Assessment" as detailed in the Directive, for the products to be supplied will suffice. At the moment we are conducting "Risk Assessments" in accordance with the Directive, on a broad range of core products which will be published on the web site. A more limited range of products will have the full ATEX certification where this is deemed necessary.

ATEX = “ATmosphère EXplosible”

Levels of protection for the various equipment categories

The various equipment categories must be capable of operating in accordance with the manufacturer's operating specifications at defined levels of protection.

Level of protection	Category		Type of protection	Operating specifications
	Group I	Group II		
Very high	M1		Two independent means of protection or safety, ensuring that the equipment remains functional even in the event of two faults occurring independently of each other.	The equipment remains energised and functional even with an explosive atmosphere present.
Very high		1	Two independent means of protection or safety, ensuring that the equipment remains functional even in the event of two faults occurring independently of each other.	The equipment remains energised and functional in zones 0, 1, 2 (G) and/or zones 20, 21, 22 (D).
High	M2		Protection suitable for normal operation and severe operating conditions.	The equipment is de-energised in the event of an explosive atmosphere.
High		2	Protection suitable for normal operation and frequent faults, or equipment in which faults normally have to be taken into account.	The equipment remains energised and functional in zones 1, 2 (G) and/or zones 21, 22 (D).
Normal		3	Protection suitable for normal operation.	The equipment remains energised and functional in zones 2 (G) and/or zones 22 (D).

Definition of groups (EN 1127-1)

Group I Equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by flammable vapours and/or flammable dusts.

Group II Equipment intended for use in other places exposed to explosive atmospheres.

Group	I mines, combustible vapours		II other potentially explosive atmospheres (gases, dust)					
	M1	M2	1		2		3	
Category								
Atmosphere*			G	D	G	D	G	D
Zone			0	20	1	21	2	22

* G = gas and D = dust

Temperature classes

Classification of flammable gases and vapours on the basis of ignition temperature.

Temperature class	Max. allowed temperature on the surface of the material (°C)
T1	450
T2	300
T3	200
T4	135
T5	100
T6	85

Parker components out of scope of the ATEX Directive :

Essential elements with the reliable use of the products and protection systems, but not having an autonomous function nor an own ignition source.

Note :

Sample instruction leaflets are illustrated in the ATEX catalogue PDE2584TC**

in French, English, German, Italian, Spanish and Swedish.

For other languages please consult your local Parker Sales Office.

Declaration of conformity

The product catalogues contain copies of the declaration of conformity demonstrating that the product meets the requirements of directive 94/9/EC.

The declaration is only valid in conjunction with the instructions contained in the installation manual relating to the safe use of the product throughout its service life.

The instructions relating to the conditions in the surrounding area are particularly important, as the certificate is invalidated if the instructions are found not to have been adhered to during operation of the product. If there is any doubt as to the validity of the certificate of conformity, contact Parker Hannifin customer service.

Operation, installation and maintenance

The product installation manual contains instructions relating to the safe storage, handling, operation and servicing of the product.

The manual is available in different languages, and can be downloaded from www.parker.com/euro_pneumatic.

This document must be made accessible in a suitable place near where the product is installed. It is used as a reference for all personnel authorised to work with the product throughout its service life.

We, the manufacturer, reserve the right to modify, extend or improve the installation manual in the interests of the users.

For more information about ATEX see EUs homepage: <http://europa.eu.int/comm/enterprise/atex/>

See complete chart next page

P1V-S is a range of air motors with all external components made of stainless steel, which means that they can be used in food grade applications, and in all other applications where there is a risk of corrosion.

- Power from 0.02 kW to 1.2 kW
- ATEX CE Ex approved from 0.12 kW to 1.2 kW
- Designed for arduous applications
- No-lube intermittent operation as standard

Operating information

Working pressure : Max 6 bar in Ex area
 Working temperature : -20° to +40°C in Ex area
 Fluid: Compressed air with ISO 8573-1 Quality class 3.4.3 (no-lube operation) and 3.-.5 (lube operation)

Note : All technical data are based on a working pressure of 6 bar and with oil. For oil-free performances are -10 to 15% lower. Data tolerance accuracy +-10%

For details, see technical catalogue on web site :

* Max permitted torque to not damage the gearbox

The high torque motors of the P1V-S type are small in size but provide extremely high output. Our high torque motors are also less apt to stall. These drive solutions are particularly suitable for use in industrial agitators and mixers as used in the paint industry, food industry or pharmaceutical industry.

- Power 0.28, 0.57 and 0.86 kW
- Designed for arduous applications
- No-lube intermittent operation as standard

CE II 2 GD c IIC T6 (80°C) X

Operating information

Working pressure	Max 6 bar in Ex area
Working temperature	-20° to +40°C in Ex area
Fluid	Compressed air with ISO 8573-1 Quality class 3.4.3 (no-lube operation) and 3.-.5 (lube operation)

Note : All technical data are based on a working pressure of 6 bar and with oil.
For oil-free performances are -10 to 15% lower.
Data tolerance accuracy +-10%

For details, see technical catalogue on web site :

P1V-M is a series of air motors, with or without gear box. They are made of grey casted iron and its robustness makes it suitable for all industrial air motor applications.

The range contains five different sizes with power ratings of 200, 400, 600, 900 and 1200 Watts,

The motor and gearbox are built to be extremely strong, making the motors suitable for applications requiring considerable robustness. The gearbox is of the planetary type, permanently lubricated with grease. The flange mounting is cast as an integral part of the case, and give, together with the foot bracket, plenty of opportunity for simple and robust installation.

- Power 0.2 kW, 0.4 kW, 0.6 kW, 0.9 kW & 1.2 kW
- Patented method for simple change of vanes
- Free speeds from 32 up to 10000 rpm
- Torque from 0.38 Nm up to 120 Nm by max output power
- Standard equipped with flange mounting
- Foot mountings as accessories

Components for EX-Areas

Information for ATEX-Directives

The rodless pneumatic cylinders of Parker Origa are the first linear drive unit, for that Ex range in the group of equipment II, Category 2 GD are certified. For more detailed information about the OSP series please consult catalogue P-A4P011GB.

Rodless Cylinder Ø 10-80 mm

Basic Cylinder - Series: OSP-P ... ATEX

Basic Guide Ø 25-50 mm

Basic Guide - Series: BG ... ATEX

Plain Bearing Guide Ø 16-80 mm

SLIDELINE - Series: SL ... ATEX

Technical Data (deviant to the Standard Cylinder)

Characteristics	Description
General Features	
Ambient temperature range T_{min}	-10 °C
T_{max}	+60 °C
Max. switching frequency	1 Hz (double stroke/s) Basic cylinder 0.5 Hz (1stroke/s) Cylinder with guide
Operating pressure range p_{max}	Max. 8 bar
Max. speed v_{max}	3 m/s (Basic cylinder) 2 m/s (Cylinder with guide SLIDELINE and cylinder with guide BASIC GUIDE)
Medium	Filtered, unlubricated compressed air – free from water and dirt to ISO 8573-1 Solids: Class 7 particle size < 40 µm for Gas Water content: pressure dew point +3 °C, class 4, but at least 5 °C below minimum operating temperature
Noise level	70 dB (A)
Information for materials	
Aluminium	See data sheet "Material"
Lubrication	See security data sheet "Grease for use in Cylinder with guides"
Sealing bands	Corrosion resistant steel

Equipment Group II Category 2GD

Rodless cylinder:  II 2GD c T4 T135°C -10°C ≤ Ta ≤ +60°C

Series	Size	Stroke range	Accessories
OSP-P	Ø 10 to 80	1– 6000 mm	Mountings programme
BASIC GUIDE	Ø 25 to 50	1– 6000 mm	Mountings programme
SLIDELINE	Ø 16 to 80	1– 5500 mm	Mountings programme

This range of stainless steel cylinders has been specially designed for use in difficult environments. Hygienic design, external seals of flouriated rubber and prelubricated with our food-industry-approved grease according to USDA-H1 make the cylinders particularly suitable for food industry use. All cylinders have magnetic pistons for proximity position sensing. Fixing dimensions to ISO 6431 simplify installation and make the cylinders physically interchangeable throughout the world.

- Round cylinder to ISO 6431
- All stainless steel
- Clean, smooth washdown design
- Magnetic piston as standard
- Adjustable cushioning for long service life
- Complete range of mountings and sensors

Operating information

Working pressure: Max 10 bar
 Temperature range: -20°C to +70°C
 ATEX approval : CE Ex II 2GD c T4 120 °C

Prelubricated, further lubrication is not normally necessary. If additional lubrication is introduced it must be continued.

The innovative P1D is a future-proof generation of ISO/VDMA cylinders. The cylinders are double-acting, with a new design of air cushioning.

The P1D complies with the current ISO 6431, ISO 15552, VDMA 24562 and AFNOR installation dimension standards.

- Available in 32 to 125 mm bores
- PUR seals for long service life
- Drop-in sensors
- Corrosion resistant design
- Magnetic piston as standard
- Lubricated with food grade grease

The cylinders are supplied complete with a zinc plated steel piston rod nut.

P1D-T Large Bore Cylinders

The P1D-T range of tie rod cylinders is intended for use in a wide range of applications. Careful design and high quality manufacture throughout ensure long service life and optimum economy. Mounting dimensions fully in accordance with ISO 15552 (ISO 6431 and CETOP RP52P) greatly simplifies installation and world-wide interchangeability.

- Bore sizes Ø160 - Ø320mm
- Stroke lengths 10mm - 2000mm
- Magnetic piston as standard
- Adjustable cushioning as standard
- High temperature version
- Special version on request

The cylinders are supplied complete with a zinc plated steel piston rod nut.

ATEX P8S Sensors

Drop-in sensors

The completely new "drop-in" P1D sensors can easily be installed from the side in the sensor groove, at any position along the piston stroke. The sensors are completely recessed and thus mechanically protected. Choose between electronic or reed sensors and several cable lengths and 8 mm and M12 connectors. The same standard sensors are used for all P1D versions, i.e. even for P1D Clean with the patent applied system of integrated sensors. Please note that the sensors with 8 mm and M12 connector should have cable lengths 1 m for P1D Clean to allow flexible positioning of the sensors, including longer stroke lengths. There is a double jointed adapter for the tie-rod version, which offers simple and flexible use of standard sensors.

CE Ex II 3 G EEx nA II T4 X
II 3 D T135 °C IP67

Electronic sensors

The new electronic sensors are "Solid State", i.e. they have no moving parts at all. They are provided with short-circuit protection and transient protection as standard. The built-in electronics make the sensors suitable for applications with high on and off switching frequency, and where very long service life is required.

APB = All Ports Blocked

The above valve operation can be either :

- Pneumatic, with the addition of one or two pilot connectors complete with Ø4 mm Push-in connections : PVA-P111, PVA-P121, or PVA-P125.
- Electrical, with the addition of one or two solenoid actuators, only 6 W / 8.5 VA, P2FS ATEX certified type, (see page 19).

Mounting

The valves have integral mounting holes suitable for M4 screws and can be directly mounted onto any suitable surface. The pipework connections will be either use of threaded fittings or direct Push-in depending on the body selected.

IEC Ex m II T4
IP65 DIP A21 T130 °C

Compact 3/2 normally closed metal bodied valves with push-in air connections. Designed for the process duty cycle with high durability. Ideal for the process or packaging industry.

- High durability
- Very good repeat accuracy
- Designed for process duty cycle
- Push-in connection
- Versatile and easily maintained
- Miniature size

Designed to fit the standard electrical Ø22mm knock out, they can provide dual pneumatic and electrical output signals. A variety of button and switch actuators are available.

- Facia mounted operation
- 3/2 NO or NC
- Modular construction
- Wide range of actuators
- Dual pneumatic and electrical output signal

Flow characteristics (according to ISO 6358)

ATEX logic processing

Miniature high-speed valves in stand alone, stackable or combined modules, incorporating standard logic functions. The range also includes timers and impulse modules.

- Complete range
- Stand alone, stackable or combinable modules
- Very fast response time
- Flexible and highly maintainable system
- DIN rail mounting

CE Ex II 2GD c 85 °C

Operating information

Working pressure : 3 to 8 bar
 Working temperature : -15 °C to 60 °C
 Flow (Qmax) : 180 l/min (PRD = 90 l/min)
 ATEX approval : CE Ex II 2GD c 85 °C

- Integral 3/4 or 1" ports (BSPP or NPT)
- High efficiency element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Secondary pressure ranges 12 and 16 bar
- Rolling diaphragm for extended life
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation.
- Low temperature -40°C with Regulators/Filters and Filter Regulators using combined manual/semi auto drain as standard without pressure gauge.

Risk assembly

Manufacturer

Particular considerations concerning the association of certified products ATEX constituting of sets, complete equipment or systems:

- cylinders and accessories as sensors, cylinder controls;
- valves assembled with solenoids, connectors, islands;
- FRL(s) combinations;
- logic components in cabinets or housings;
- mixed ATEX and non ATEX concerned components integrated on a single machine or device;

ANY ASSEMBLY IS NOT COMPULSORY ATEX

User

According to 99/92/EC directive, the user (employer) must identify the buildings at the risks and classify them in zones. It defines the equipment adapted to its site.

Thus when it installs a whole equipment incorporating Atex certified apparatuses, and to avoid any risk of explosion, it must take into account the lower level of protection of the whole with regard to : the category, the maximum temperature of surface... and any parameter indicated on the marking and in the instruction leaflet of each apparatus.

P1V-S Declaration of Conformity acc. ATEX 94/9/EC
P1V-S Declaration of Incorporation acc. EC
Machinery Directive 2006/42/EC

We Parker Hannifin Manufacturing
 Germany GmbH & Co. KG
 Pneumatic Division Europe
 Industriestrasse 8
 70794 Filderstadt Germany

Declare that the following Air Motors have been assessed in accordance with ATEX 94/9/EC (Products for use in potentially explosive atmospheres). Air Motors **P1V-S012, P1V-S020, P1V-S028, P1V-S030, P1V-S057, P1V-S060, P1V-S086** and **P1V-S090** range are compatible for the use in explosive atmosphere **Ex II 2 GD c T6 (T80°C) X**. Air Motors **P1V-S120** range are compatible for the use in explosive atmosphere **Ex II 2 GD c T5 (T95°C) X**.

All without brake option.

P1V-S is designed for utilization in applications falling under the scope of the ATEX 94/9/EC. These products are designed and manufactured in compliance with following elements:

- **EN 1127-1:2007** Explosive atmospheres – Explosion prevention and protection – Part 1: Basic concepts and methodology
- **EN 13463-1:2009** Non electrical equipment for use in potentially explosive atmospheres – Part 1: Basic method and requirements
- **EN 13463-5** Non-electrical equipment intended for use in potentially explosive atmospheres – Part 5: Protection by constructional safety 'c'
- **EN 983+A1:2008** Safety of machinery – Safety requirements for fluid power systems and their components - Pneumatics

As manufacturer of the partly completed machine we declare that:

- The specified Air motor corresponds to the listed essential requirements of the EC Machinery Directive 2006/42/EC
- The relevant technical documentation is compiled in accordance with part B of Annex VII
- The relevant technical documentation in accordance with part B of Annex VII will be transmitted in response to a reasonable request by the national authorities

Product: Air motors P1V-S

Directives	Date	Applied and fulfilled essential requirements
2006/42/EC	2006-06-06	1.1.2, 1.1.5, 1.3.4, 1.5.3, 1.7.3, 1.7.4

Standards	Date	Remark
DIN EN ISO 12100	2011-03	Partly fulfilled

This partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of the Directive 2006/42/EG, were appropriated.

Filderstadt, Germany June 2014

Additional Information
 This coverage could only be referred to as long as operations needed for final assembling and starting up of these products comply with standards relating to the above mentioned directive. Each time this will be required for compliance purpose, the user will have to apply for a complete coverage of the final assembled system according to the above mentioned directive and relating standards

Ing. Franck Roussillon
 European Product Manager
 Actuators Business Unit, Pneumatic Division Europe

Additional safety instructions for installation in explosive atmospheres

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1V-S motors in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1V-S motors must be carried out by qualified personnel taking account of the following :

- These instructions.
- Notices on the motor.
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application.
- Applicable national/international regulations (explosion protection, safety and accident prevention).

Real life applications

P1V-S motors are designed to provide rotary movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the motor housing. The motors meet the applicable standards and requirements of the Machinery Directive 94/9/EC (ATEX).

The motors must not be used as brakes in explosive atmospheres.

Braking involves driving the motor against the direction of rotation for which the motor is supplied with compressed air. The motor is then operating as a compressor, and there is a corresponding increase in temperature.

The motors must **not** be used underground in mines susceptible to firedamp and/or combustible dust. The motors are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of combustible liquids, or air/dust mixtures may be expected to occur during normal use (infrequently).

Checklist

Before using the motors in a potentially explosive atmosphere, you should check the following:

Do the motor specifications match the classification of the area of use in accordance with Directive 94/9/EC (previously ATEX 100a)?

- Equipment group.
- Equipment category.
- Zone.
- Temperature class.
- Max. surface temperature.

1. When installing the motor, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
3. Is it certain that the P1V-S motor is adequately ventilated and that no additional heat is added (for example in the shaft connection)?
4. Are all the driven mechanical components ATEX certified?

Installation requirements in potentially explosive atmospheres

- The temperature of the supply air must not exceed the ambient temperature.
- The P1V-S may be installed in any position.
- An air treatment unit must be attached to the inlet of the P1V-S air motor.
- In a potentially explosive atmosphere, none of the motor ports may be blocked because this may cause an increase in temperature. The air from the port must be taken to the silencer or, preferably, outside the potentially explosive area.
- The P1V-S motor must be connected to ground at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1V-S motor must not open within a potentially explosive area, but must be passed to the silencer or, preferably, removed and released outside the potentially explosive area.
- The P1V-S motor may only drive units that are ATEX certified.
- Ensure that the motor is not exposed to forces greater than those permitted in accordance with the catalogue.

Measuring the temperature on the outside of the P1V-S motor (only when used in potentially explosive areas)

During the commissioning process, it is essential to measure temperature increases at the indicated positions on the outside of the P1V-S motor.

These measurements can be taken using standard thermometers.

Checking the motor during operation

The motor must be kept clean on the outside, and a layer of dirt thicker than 5 mm must never be allowed to form. Strong solvents should not be used for cleaning, because they can cause the seal (material NBR/FPM) around the drive shaft to swell, potentially increasing the temperature.

The temperature is measured on the metal surface next to the seal around the output shaft on all P1V-S012, P1V-S020, P1V-S028, P1V-S030, P1V-S057, P1V-S060, P1V-S086 and P1V-S090 motors.

Motors P1V-S030A0023 and P1V-S030A0010

Motor	x [mm]
P1V-S030A0023	146
P1V-S030A0010	147,5

The maximum temperature is reached after approximately 1,5 hours of operation, and the difference in temperature between the motor and the ambient temperature must not exceed 40 °C.

If the temperature difference at the seal of a P1V-S 120 to 900 watts exceeds 40 °C, you should stop the motor immediately and contact Parker Hannifin.

The following applies to the P1V-S120 series:

The temperature is measured on the metal surface at a point 45 mm from the port end of the motor housing, on all P1V-S120.

The maximum temperature is reached after approximately 1,5 hours of operation, and the difference in temperature between the motor and the ambient temperature must not exceed 55 °C.

If the temperature difference at this point on a P1V-S120 exceeds 55 °C, you should stop the motor immediately and contact Parker Hannifin.

Marking of products

For all P1V-S 120 to 900 watts

CE Ex II2 GD c IIC T6 (80 °C) X

For the P1V-S120 1200 watts

CE Ex II2 GD c IIC T5 (95 °C) X

CE Communauté Européenne = EU
CE marking shows that as a manufacturer, Parker Hannifin meets the guidelines specified by the EU

Ex means that this product is intended for use in a potentially explosive area

II stands for the equipment group (I = mines and II = other places liable to be endangered)

2GD stands for equipment category
2G means the equipment can be used in zones 1 and 2 where there is a risk involving gas, vapour or mist of combustible liquids and **2D** in zones 21 and 22 where there is a risk involving dust .
2GD means the equipment can be used in zones 1, 2, 21 and 22.

c Safe design (prEN 13463-5)

IIC Explosion group, P1V-S air motors are tested to the highest standards in terms of test gases, and can be installed in the presence of all gases without restriction.

T6 If equipment is in temperature class **T6**, the maximum surface temperature must not exceed 85 °C. (To guarantee this, the product has been tested to ensure that the maximum is 80 °C. This provides a safety margin of 5 °K.)

T5 If equipment is in temperature class **T5**, the maximum surface temperature must not exceed 100 °C. (To guarantee this, the product has been tested to ensure that the maximum is 95 °C. This provides a safety margin of 5 °K.)

(80 °C) Maximum permitted surface temperature on the motor in atmospheres containing potentially explosive dust.

X Note special conditions

Test certificate number IBExU04ATEXB004 X from IBExU Institut für Sicherheitstechnik GmbH, D-09599 Freiberg, Germany

P1V-M Declaration of Conformity

According to ATEX 94/9/EC

P1V-M Declaration of Incorporation

According to EC Machinery Directive 2006/42/EC

We Parker Hannifin Manufacturing

- The relevant technical documentation is compiled in accordance with **part B of Annex VII**
- The relevant technical documentation in accordance with part B of Annex VII will be transmitted in response to a reasonable request by the national authorities

Product: Air motor P1V-M series

Directives	Date	Applied and fulfilled essential requirements
2006/42/EC	2006-06	1.1.2, 1.1.5, 1.3.4, 1.5.3, 1.7.3, 1.7.4

Standards	Date	Remark
DIN EN ISO 12100	2011-03	Partly fulfilled

This partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of the Directive 2006/42/EG, were appropriated.

Sticker	Additional Information This coverage could only be referred to as long as operations needed for final assembling and starting up of these products comply with standards relating to the above mentioned directive. Each time this will be required for compliance purpose, the user will have to apply for a complete coverage of the final assembled system according to the above mentioned directive and relating standards
--------------------	--

Filderstadt, Germany June 2014

PDE/Ulricehamn

EC Declaration of Conformity

We, Parker Hannifin AB
Pneumatic Division
P.O. Box 110
S-523 23 ULRICEHAMN
Sweden

hereby declare that the VDMA cylinder P1D-S Standard* range is compatible for use in explosive atmosphere Ex II 2 GD c T4 T120°C.

All models from range, Pneumatic cylinder ISO/VDMA P1D-S*, bore 32-125 mm.

P1D-S032MS-XXXX

P1D-S040MS-XXXX

P1D-S050MS-XXXX

P1D-S063MS-XXXX

P1D-S080MS-XXXX

P1D-S100MS-XXXX

P1D-S125MS-XXXX

XXXX= All strokes

*Without metal scraper ring

P1D-S are designed for utilization in applications falling under the scope of the Atex directive 94/9/EC. These products are designed and manufactured in compliance with the following elements:

EN 13463-1: 2001; Non-electrical equipment for potentially explosive atmospheres – Part 1: Basic method and requirements.

EN 13463-5: 2002; Non-electrical equipment intended for use in potentially explosive atmospheres – Part 5: Protection by constructional safety.

EN 983: Safety of machinery - Safety of requirements for fluid power systems and their components – Pneumatics.

The P1D complies with the current ISO 69431, ISO 15552, VDMA 24562 and AFNOR installation dimension standards

Parker Hannifin AB has been certified under the ISO 9001 QA standard since 1994.

Additional information:

This coverage could only be referred to as long as operations needed for final-assembling and starting up of these products comply with standards relating to the above mentioned directive. Each time this will be required for compliance purpose, the user will have to apply for a complete coverage of the final assembled system according to the above mentioned directives and relating standards.

Sweden Issued at Ulricehamn December 22, 2004

Inge Melkersson
Head of Design Department

Safety instructions for the P1D-S cylinder with accessories

Supplementary safety instructions for P1D-S cylinders installed in Ex-areas

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D cylinders in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1D cylinders must be carried out by qualified personnel taking account of the following :

- These instructions.
- Markings on the cylinder.
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application.
- National/international regulations (explosion protection, safety and accident prevention).

Real life applications

P1D cylinders are designed to provide linear movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the rating plate. The cylinders meet the applicable standards and requirements of directive 94/9/EC (ATEX).

The cylinders must not be used underground in mines susceptible to firedamp and/or flammable dusts. The cylinders are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of flammable liquids, or air/dust mixtures may be expected to occur during normal use (infrequently) .

Checklist

Before using the cylinders in an Ex-area, you should check the following:

Do the specifications of the P1D-S cylinder match the Ex-classification of the area of use in accordance with directive 94/9/EC (previously ATEX 100a)?

- Equipment group.
- Ex-equipment category.
- Ex-zone.
- Temperature class.
- Max. surface temperature.

1. When installing the P1D-S cylinder, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
3. Is it certain that the P1D-S cylinder is adequately ventilated and that no forbidden additional heat is added?
4. Are all the driven mechanical components ATEX certified?
5. Check that the P1D-S cylinder is safely earthed.
6. Check that the P1D-S cylinder is supplied with compressed air. Explosive gas mixtures must not be used for driving the cylinder.
7. Check that the P1D-S cylinder is not equipped with a metal scraper ring (special version).

Installation requirements in Ex-areas

- The temperature of the supply air must not exceed the ambient temperature.
- The P1D-S cylinder may be installed in any position.
- An air treatment unit must be attached to the inlet of the P1D-S cylinder.
- The P1D-S cylinder must be connected to earth at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1D-S cylinder must not open within an Ex-area, but must be passed to the silencer or, preferably, removed and released outside the Ex-area.
- The P1D-S cylinder may only drive units that are ATEX certified.
- Ensure that the P1D-S cylinder is not exposed to forces greater than those permitted in accordance with the catalogue.
- The P1D-S cylinder must be supplied with compressed air. Explosive gas mixtures must not be used.
- P1D-S cylinders with metal scraper rings must not be used in Ex-areas.

Inspecting cylinders during operation

The P1D cylinder must be kept clean on the outside, and a layer of dust/dirt thicker than 1 mm must never be allowed to form. Strong solvents should not be used for cleaning, because they can cause the seal (material PUR) around the piston rod to swell, potentially increasing the temperature. Inspect and verify that the cylinder, with attachments, compressed air fittings, hoses, tubes, etc. meet the standards of "safe" installation.

Marking of cylinder P1D-S Standard (P1D-S***MS-****)

Communauté Européenne = EU

CE on the product shows that Parker Hannifin products meet one or more EU directives.

Ex means that this product is intended for use in potentially explosive atmospheres.

II

Stands for the equipment group (I = mines and II = other hazardous areas).

2GD

Stands for equipment category.

2G means the equipment can be used in zones 1 and 2 where there is a risk involving gases, vapours or mists of combustible liquids and **2D** in zones 21 and 22 where there is a risk involving dusts. **2GD** Means the equipment can be used in zones 1, 2, 21 and 22.

c

Safe design (EN 13463-5).

T4

If equipment is in temperature class **T4**, the maximum surface temperature must not exceed 135 °C. (To guarantee this, the product has been tested to ensure that the maximum is 130 °C. This provides a safety margin of 5 °K).

120 °C

Maximum permitted surface temperature on P1D-S cylinder in atmospheres containing potentially explosive dust.

Safety instructions for the P1D-T cylinder with accessories

Supplementary safety instructions for installation of ATEX certified cylinders.

The safety instructions in this document are valid for the ATEX certified P1D-T cylinders, bore 160 - 320mm, as per below with reference to the order code key in the product catalogue.

P1D-T***MS-****-EXNN

All strokes in the range 50 - 1000mm

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D-T cylinders in the presence of explosive gas mixtures and concentrations of dust.

All installation, connection, commissioning, servicing and repair work on P1D-T cylinders must be carried out by qualified personnel taking account of the following

- These instructions
- Markings on the cylinder
- All other planning documents, commissioning instructions and connection diagrams associated with the application.
- Provisions and requirements specific to the application
- National/international regulations (explosion protection, safety and accident prevention)

Real life applications

P1D-T cylinders are designed to provide linear movement in industrial applications, and should only be used in accordance with the instructions in the technical specifications in the catalogue, and within the operating range indicated on the rating plate.

The cylinders meet the applicable standards and requirements of directive 94/9/EC (ATEX)

The cylinders must not be used underground in mines susceptible to firedamp and/or flammable dusts. The cylinders are intended for use in areas in which explosive atmospheres caused by gases, vapours or mists of flammable liquids, or air/dust mixtures may be expected to occur during normal use (infrequently)

Checklist

Before using the cylinders in an Ex-area, you should check the following:

Do the specifications of the P1D-T cylinder match the Ex-classification of the area of use in accordance with directive 94/9/EC (previously ATEX 100a)

- Equipment group
 - Ex-equipment category
 - Ex-zone
 - Temperature class
 - Max. surface temperature
1. When installing the P1D-T cylinder, is it certain that there is no potentially explosive atmosphere, oil, acids, gases, vapours or radiation?
 2. Is the ambient temperature as specified in the technical data in the catalogue at all times?
 3. Is it certain that the P1D-T cylinder is adequately ventilated and that no forbidden additional heat is added?
 4. Are all the driven mechanical components ATEX certified?
 5. Check that the P1D-T cylinder is safely earthed.
 6. Check that the P1D-T cylinder is supplied with compressed air. Explosive gas mixtures must not be used for driving the cylinder.
 7. Check that the P1D-T cylinder is not equipped with a metal scraper ring (special version).

Installation requirements in Ex-areas

- The temperature of the supply air must not exceed the ambient temperature.
- The P1D-T cylinder may be installed in any position.
- The P1D-T cylinder must not be installed where there is a risk of mechanical contact with any surrounding part or component.
- An air treatment unit must be attached to the inlet of the P1D-T cylinder.
- The P1D-T cylinder must be connected to earth at all times, through its support, a metallic tube or separate conductor.
- The outlet of the P1D-T cylinder must not be open within an Ex-area, but must be connected to the silencer or, preferably, piped and released outside the Ex-area.
- The P1D-T cylinder may only drive units that are ATEX certified.
- Ensure that the P1D-T cylinder is not exposed to forces greater than those permitted in accordance with the catalogue
- The P1D-T cylinder must be supplied with compressed air. Explosive gas mixtures must not be used
- P1D-T cylinders with metal scraper rings must not be used in Ex-areas

Inspecting cylinders during operation

The P1D-T cylinder must be kept clean on the outside, and a layer of dust/dirt thicker than 1 mm must never be allowed to form. Inspect and verify that the cylinder, with attachments, compressed air fittings, hoses, tubes, etc. meet the standards of "safe" installation.

Spare parts

Only spare parts, kits etc. supplied by Parker Hannifin may be used for repair and maintenance of the P1D-T cylinders.

Marking of ATEX certified P1D-T cylinders

The ATEX certified P1D-T cylinders, bore 160 - 320mm, as per below with reference to the order code key in the product catalogue have an ATEX certification marking as shown further below.

P1D-T***MS-****-EXNN

All strokes in the range 50 - 1000mm

CE **II 2GD c T4 120 °C**

Supplementary safety instructions for P8S- GPFLX/EX sensors installed in Ex-areas

Serious, even fatal, damage or injury may be caused by the hot moving parts of the P1D cylinders in the presence of explosive gas mixtures and concentrations of dust.

Instructions for use

Safety instructions

- Cylinder sensor ATEX classed for category II3G and II3D.
- Ambient temperature $T_a = -20\text{ °C}$ to $+45\text{ °C}$.
- Temperature class T4 (gas), or max. surface temperature of $T = 135\text{ °C}$ (dust).
- Protection class IP67.
- Read installation instructions before startup.
- Installation, connection and commissioning must be carried out by trained personnel.

Applications

- This sensor is designed for use in the T-groove of cylinders, and detects the magnetic field in potentially explosive areas. The sensor can only be installed in the T-groove of these cylinders.

- The sensor may also be installed on round cylinders by means of the following attachments:

P8S-TMC01 Suitable for P1S and P1A diameter 10 - 25 mm

P8S-TMC02 Suitable for P1S diameter 32 - 63 mm

P8S-TMC03 Suitable for P1S diameter 80 - 125 mm.

The following data applies to these attachments :

- Ambient temperature $T_a = 0\text{ °C}$ to 45 °C
 - Low energy absorption to EN 50 021.
 - The sensor may also be installed on tie-rod cylinders or profile cylinders by means of this attachment :
- P8S-TMA0X** Suitable for P1D-T diameter 32 - 125 mm, P1E-T diameter 160 – 200 mm and C41 diameter 160 – 200 mm.

Installation

General : The sensor must be protected from UV radiation. The cable must be installed such that it is protected from external influences, for example it may be necessary to attach an external strain relief to the cable.

Technical data for sensor

Operating voltage $U_b = 18$ to 30 V DC

Max. load current $I_a = 70\text{ mA}$

Ambient temperature: -20 °C to 45 °C

Commissioning

When connecting the sensor to a power source, please pay attention to the following

- a) the load data (operating voltage, continuous load current)
- b) the wiring diagram for the sensor.

Maintenance

Our P8S-GPFLX/EX cylinder sensor is maintenance free, but the cable connections should be checked at regular intervals.

The sensor must be protected from UV radiation. The sensor must be kept clean on the outside, and a layer of dirt thicker than 1 mm must never be allowed to form. Strong solvents should not be used for cleaning as they may damage the sensor.

P8S-GPFLX/EX cylinder sensor

II 3G EEx nA II T4X
II 3D T135 °C IP67

Communauté Européenne = EU

CE on the product shows that Parker Hannifin products meet one or more EU directives.

Ex means that this product is intended for use in potentially explosive atmospheres.

II

Stands for the equipment group (**I** = mines and **II** = other hazardous areas).

3G

Stands for the equipment category.

3G means the equipment can be used in zone 2 where there is a risk involving gases, vapours or mists of combustible liquids.

EEx

EEx means that this is an electrical product intended for use in Ex-areas.

nA II

n Not ignitable to EN50021, **A** Explosion group tested with acetone, ethanol, toluene and xylene; **II** Not for use in the mining industry.

T4 X

If equipment is in temperature class **T4**, the maximum surface temperature must not exceed 135 °C . (To guarantee this, the product has been tested to ensure that the maximum is 130 °C . This provides a safety margin of 5 °K). **X** Must be installed in accordance with the installation manual.

3D

Stands for equipment category **3D** in zone 22 where there is a risk involving dust.

135 °C

Maximum permitted surface temperature on the motor in atmospheres containing potentially explosive dust.

IP67

Satisfies protection class **IP67**.

Components such as cylinder attachments, tube fittings, tubes, etc.

Components

Parker Hannifin guarantees that our cylinder attachments, tube fittings, tubes, etc. are not subject to the provisions of the ATEX directive because they have no proper source of inflammation, nor an own ignition source.

A component means any item essential to the safe functioning of equipment and protective systems but with no autonomous function. Consequently, they are not marked and not any specific ATEX document will be added.

Examples :

- Tubes
- Fittings
- Fixings
- Mounting brackets
- Panels...

Global cylinder sensor P8S-GPFLX/EX for pneumatic cylinders

Instructions for use

Safety instructions

- Cylinder sensor ATEX classed for category II3G and II3D
- Ambient temperature $T_a = -20^\circ\text{C}$ to $+45^\circ\text{C}$
- Temperature class T4, or max. surface temperature of $T = 135^\circ\text{C}$
- Protection class IP67
- Read installation instructions before startup
- Installation, connection and commissioning must be carried out by trained personnel

Applications

- This sensor is designed for use in the T-groove of cylinders, and detects the magnetic field in explosion hazardous areas. The sensor can only be installed in the T-groove of these cylinders.

- The sensor may also be installed on round cylinders by means of the following attachments:

P8S-TMC01	Suitable for P1S and P1A diameter 10 - 25 mm
P8S-TMC02	Suitable for P1S diameter 32 - 63 mm
P8S-TMC03	Suitable for P1S diameter 80 - 125 mm

The following data applies to these attachments:

- Ambient temperature $T_a = 0^\circ\text{C}$ to 45°C
- High energy absorption to EN 50 021

- The sensor may also be installed on tie-rod cylinders or profile cylinders by means of this attachment:

P8S-TMA0X	Suitable for P1D-T diameter 32 - 125 mm, P1E-T diameter 160 - 200 mm and C41 diameter 160 - 200 mm
------------------	--

Installation

General: The sensor must be protected from UV radiation. The cable must be installed such that it is protected from external influences, for example it may be necessary to attach an external strain relief to the cable.

Technical data for sensor

Operating voltage	$U_b = 18$ to 30 V DC
Max. load current	$I_b \leq 70$ mA
Ambient temperature:	-20°C to 45°C

Commissioning

- When connecting the sensor to a power source, please pay attention to the following:
- a) the load data (operating voltage, continuous load current)
 - b) the wiring diagram for the sensor

Maintenance

Our P8S-GPFLX/EX cylinder sensor is maintenance free, but the cable connections should be checked at regular intervals. The sensor must be protected from UV radiation. The sensor must be kept clean on the outside, and a layer of dirt thicker than 1 mm must never be allowed to form. Strong solvents should not be used for cleaning as they may damage the sensor.

UK

Global cylindersensor P8S-GPFLX/EX för pneumatikcylinder

Användningsinstruktion

Säkerhetsinstruktion

- Cylinder sensor ATEX klassad för kategori II3G och II3D
- Omgivningstemperatur $T_a = -20^\circ\text{C}$ till $+45^\circ\text{C}$
- Temperaturklass T4, eller max ytemperatur på $T = 135^\circ\text{C}$
- Skyddsklass IP67
- Läs installationsanvisningen innan uppstart
- Montering, anslutning och idrifttagande skall göras av utbildad personal

Användningsområde

- Denna sensor för användning i T-spår på cylindrar är för att känna av magnetfältet i explosionsfarliga områden. På dessa cylindrar får sensorn bara monteras i T-spår.

- Sensorn kan även monteras på rundcylindrar med hjälp av fästena:

P8S-TMC01	Passar till P1S och P1A med diameter 10 - 25 mm
P8S-TMC02	Passar till P1S med diameter 32 - 63 mm
P8S-TMC03	Passar till P1S med diameter 80 - 125 mm

För dessa fästen gäller följande:

- Omgivningstemperatur $T_a = 0^\circ\text{C}$ till 45°C
- Låg nivå av energiabsorption enligt EN 50 021

- Sensorn kan även monteras på cylindrar med dragstänger eller profilrör med hjälp av fästet:

P8S-TMA0X	Passar till P1D-T diameter 32 - 125 mm, P1E-T diameter 160 - 200 mm och C41 diameter 160 - 200 mm
------------------	---

Montering

Allmänt: Sensorn måste skyddas mot UV-strålning. Kabeln måste monteras så att den är skyddad mot påverkan, tex kan en yttre dragavlastning av kabel behöva monteras.

Tekniska data på sensorn

Arbetspänning	$U_b = 18$ till 30 V DC
Max belastningsström	$I_b \leq 70$ mA
Omgivningstemperatur:	-20°C till 45°C

Idrifttagande

- Vid anslutning av sensorn till en spänningskälla måste hänsyn tas till följande punkter:
- a) belastningsdata (arbetspänning, kontinuerlig belastningsström)
 - b) anslutningsschema för sensorn

Underhåll

Vår cylindersensor P8S-GPFLX/EX är underhållsfri, dock bör kabelanslutningen kontrolleras med jämna mellanrum. Sensorn måste skyddas mot UV-strålning. Sensorn måste hållas ren på utsidan och ett smutskikt mer än 1 mm skall undvikas. Vid rengöring bör ej starka lösningsmedel användas då de kan skada sensorn.

SE

Capteur mondial P8S-GPFLX/EX pour vérin pneumatique

Instructions de service

Instructions de sécurité

- Capteur ATEX pour vérin, prévu pour les catégories II3G et II3D
- Température ambiante $T_a = -20^\circ\text{C}$ à $+45^\circ\text{C}$
- Classe de température T4 ou température maximale de surface $T = 135^\circ\text{C}$
- Indice de protection IP67
- Lire le guide d'installation avant la mise en service
- Le montage, les connexions et la mise en service doivent être effectués par du personnel dûment formé

Champs d'utilisation

- Ce capteur qui s'éniche dans les rainures en T d'un vérin a pour but de détecter le champ magnétique en atmosphère explosive. Le capteur ne peut être monté que dans les rainures en T de ces vérins.

- Le capteur peut également être monté sur des vérins cylindriques au moyen des fixations suivantes :

P8S-TMC01	pour P1S et P1A, 10 à 25 mm de diamètre ;
P8S-TMC02	pour P1S, 32 à 63 mm de diamètre ;
P8S-TMC03	pour P1S, 80 à 125 mm de diamètre.

Pour ces fixations, les données suivantes s'appliquent :

- Température ambiante $T_a = 0^\circ\text{C}$ à 45°C
- Faible niveau d'absorption énergétique selon EN 50 021

- Le capteur peut également être monté sur des vérins à tirants ou à tube profilé au moyen de la fixation suivante :

P8S-TMA0X	pour P1D-T, 32 à 125 mm de diamètre ; pour P1E-T, 160 à 200 mm de diamètre ; pour C41, 160 à 200 mm de diamètre.
------------------	--

Montage

Généralités : Le capteur doit être protégé contre les UV. Le câble doit être monté de façon à être protégé contre les influences extérieures. Cela pourra nécessiter le montage d'une bride évitant les contraintes sur le câble du capteur.

Caractéristiques techniques du capteur

Tension d'utilisation	$U_b = 18$ à 30 V CC
Intensité de charge max.	$I_b \leq 70$ mA
Température ambiante :	-20°C à 45°C

Mise en service

- Lors de la mise sous tension du capteur, prendre en considération les points suivants :
- a) paramètres de charge (tension d'utilisation, courant de charge continu)
 - b) schéma de câblage du capteur

Entretien

Le capteur P8S-GPFLX/EX ne nécessite aucun entretien. Toutefois, il convient d'inspecter régulièrement la connexion du câble. Le capteur doit être protégé contre les UV. Garder l'extérieur du capteur propre et éviter un encrassement trop important (plus de 1 mm). En nettoyant, ne pas utiliser des solvants forts car ils risquent d'endommager le capteur.

FR

Globaler Zylindersensor P8S-GPFLX/EX für Pneumatikzylinder

Anwendungsanleitung

Sicherheitshinweise

- Zylindersensor, ATEX-zugelassen für die Kategorien II3G und II3D
- Umgebungstemperatur $T_a = -20^\circ\text{C}$ bis $+45^\circ\text{C}$
- Temperaturklasse T4, oder max. Außentemperatur $T = 135^\circ\text{C}$
- Schutzart IP67
- Vor Inbetriebnahme die Installationsanleitung lesen
- Montage, Anschluss und Inbetriebnahme muss durch geschultes Personal erfolgen

Anwendungsbereich

- Dieser Sensor wird in die T-Nut an Zylindern montiert und soll in explosionsgefährdeten Bereichen das Magnetfeld abtasten. An diesen Zylindern darf der Sensor ausschließlich in die T-Nut montiert werden.

- Der Sensor lässt sich mit Hilfe folgender Befestigungen auch an Rundzylinder montieren:

P8S-TMC01	passend für P1S und P1A mit $\varnothing 10 - 25$ mm
P8S-TMC02	passend für P1S mit $\varnothing 32 - 63$ mm
P8S-TMC03	passend für P1S mit $\varnothing 80 - 125$ mm

Für diese Befestigungen gilt Folgendes:

- Umgebungstemperatur $T_a = 0^\circ\text{C}$ bis 45°C
- Niedriger Gefährdungsgrad bzgl. Schlagenergie nach EN 50021

- Der Sensor lässt sich mittels folgender Befestigungen auf Zylinder mit Zugstangen oder Profilrohr montieren:

P8S-TMA0X	passend für P1D-T, $\varnothing 32 - 125$ mm, P1E-T, $\varnothing 160 - 200$ mm und C41, $\varnothing 160 - 200$ mm
------------------	---

Montage

Allgemein: Der Sensor ist vor UV-Strahlung zu schützen. Das Kabel so montieren, dass es vor äußeren Einwirkungen geschützt ist. So kann z.B. eine äußere Zugentlastung erforderlich sein.

Technische Daten des Sensors

Betriebsspannung	$U_b = 18$ bis 30 V GS
Max. Belastungsstrom	$I_b \leq 70$ mA
Umgebungstemperatur:	-20°C bis 45°C

Inbetriebnahme

Bei Anschluss des Sensors an eine Spannungsquelle sind folgende Punkte zu beachten:

- a) Belastungsdaten (Betriebsspannung, ständiger Belastungsstrom)
- b) Anschluss-Schaltplan des Sensors

Wartung

Der Zylindersensor P8S-GPFLX/EX ist wartungsrei. Jedoch sollte der Kabelanschluss regelmäßig kontrolliert werden. Der Sensor ist vor UV-Strahlung zu schützen. Die Außenseite des Sensors muss sauber gehalten werden. Eine Schmutzschicht von mehr als 1 mm ist zu vermeiden. Zur Reinigung keine starken Lösungsmittel verwenden. Diese können den Sensor beschädigen.

DE

II 3G EEx nA II T4X
II 3D T135°C IP67

Sensore universale P8S-GPFLX/EX per cilindri pneumatici Istruzioni per l'uso

IT

Norme di sicurezza

- Il sensore per cilindri a norma ATEX rientra nelle classi II 3G e II 3D
- Temperatura ambiente T_a : da -20 °C a +45 °C
- Classe di temperatura T4 o max. temperatura ambiente T di 135 °C
- Classe di protezione IP67
- Leggere le istruzioni per l'installazione prima dell'uso
- Installazione, collegamento e messa in funzione devono essere effettuati da personale addestrato

Applicazioni

- Questo sensore viene installato nella scanalatura a T dei cilindri per rilevare il campo magnetico in ambienti esplosivi. Su questi cilindri il sensore deve essere installato esclusivamente nella scanalatura a T.
- Il sensore può anche essere installato su cilindri rotondi per mezzo degli appositi attacchi:
 - P8S-TMC01** per l'installazione su P1S e P1A con diametro 10-25 mm;
 - P8S-TMC02** per l'installazione su P1S con diametro 32-63 mm;
 - P8S-TMC03** per l'installazione su P1S con diametro 80-125 mm.
- Per i suddetti attacchi vale quanto segue:
 - Temperatura ambiente T_a : da 0 °C a 45 °C
 - Non esporre a sollecitazioni eccessive, come indicato nella norma EN 50021
- Il sensore può anche essere installato su cilindri con tiranti o tubi profilati per mezzo dell'apposito attacco:
 - P8S-TMA0X** per l'installazione su P1D-T con diametro 32-125 mm;
 - P1E-T con diametro 160-200 mm;
 - C41 con diametro 160-200 mm.

Installazione

Generalità: Il sensore deve essere protetto dai raggi UV. Il cavo deve essere installato in posizione protetta, ad es. potrebbe essere necessario montare un supporto esterno.

Dati tecnici del sensore

Tensione di esercizio U_n = 18-30 V DC
Max. corrente di carico I_n = 70 mA
Temperatura ambiente: da -20 °C a 45 °C

Messa in funzione

In sede di collegamento del sensore a un generatore di tensione, prestare attenzione a quanto segue:

- dati di carico (tensione di esercizio, corrente di carico continua);
- schema di collegamento del sensore.

Manutenzione

Il nostro sensore per cilindri P8S-GPFLX/EX non richiede manutenzione, ma si consiglia di controllare regolarmente il raccordo del cavo. Il sensore deve essere protetto dai raggi UV. L'esterno del sensore deve essere mantenuto pulito. Evitare strati di sporcizia superiori a 1 mm. Per la pulizia, non utilizzare solventi forti che potrebbero danneggiare il sensore.

Sensor de cilindro Global P8S-GPFLX/EX para cilindros neumáticos Instrucciones de uso

ES

Instrucciones de seguridad

- Sensor de cilindro ATEX, clasificado en las categorías II 3G y II 3D
- Temperatura ambiente T_a : -20 °C a +45 °C
- Clase de temperatura T4, o temperatura máxima de superficie T = 135 °C
- Clase de protección IP67
- Leer las instrucciones de instalación antes de usar
- El montaje, la conexión y la puesta en funcionamiento deben hacerlo personal especializado.

Campos de uso

- Sensor para el uso en la ranura T de los cilindros, para detectar el campo magnético en entornos explosivos. En estos cilindros el sensor sólo se puede montar en la ranura T.
- El sensor también se puede montar en cilindros esféricos usando los siguientes soportes:
 - P8S-TMC01** para el P1S y P1A con diámetro 10 - 25 mm
 - P8S-TMC02** para el P1S con diámetro 32 - 63 mm
 - P8S-TMC03** para el P1S con diámetro 80 - 125 mm
- Para estos soportes rige:
 - Temperatura ambiente T_a = 0 °C a 45 °C
 - Bajo grado de choque eléctrico según EN 50 021
- El sensor también se puede montar en cilindros con varillas o perfiles con los soportes:
 - P8S-TMA0X** para el P1D-T diámetro 32 - 125 mm,
 - P1E-T diámetro 160 - 200 mm
 - y C41 diámetro 160 - 200 mm

Montaje

Generalidades: El sensor debe ser protegido contra las radiaciones UV. El cable debe ser montado protegiéndolo de los efectos externos, p. ej. puede ser necesario montar un soporte externo del cable.

Especificaciones técnicas del sensor

Tensión de trabajo U_n = 18 a 30 V CC
Corriente máxima de carga I_n = 70 mA
Temperatura ambiente: -20 °C a 45 °C

Puesta en funcionamiento

Al conectar el sensor a una fuente de potencia se deben tener en cuenta los siguientes aspectos:

- datos de carga (tensión de trabajo, corriente de carga continua)
- esquema de conexión del sensor

Mantenimiento

Nuestro sensor P8S-GPFLX/EX no requiere mantenimiento, pero la conexión del cable debe ser controlada regularmente. El sensor debe ser protegido contra las radiaciones UV. El exterior del sensor se debe mantener limpio y se debe evitar una capa de suciedad de más de 1 mm. No usar agentes limpiadores fuertes, el sensor se puede dañar.

We hereby declare that sensors P8S-GPFLX/EX comply with the basic requirements of the EC Directive specified under point 1.

Producer Parker Hannifin AB, Box 110, S-52323 Ulricehamn, Sweden

1 - SPECIFICATIONS																			
• Max Operating Frequency	Size 1 10 Hz	Size 2 5 Hz	Size 3 4 Hz																
• Operating temperature (Ta)	-10°C to +60°C (14°F to 140°F)																		
• Fluid temperature	-10°C to +60°C (14°F to 140°F)																		
• Operating pressure	30 to 145 psi																		
• internal pressure	-13 to 145 psi																		
• external pressure	- Filtered air or inert gas class 5, - Dry air or inert gas class 4																		
• Air condition	Any position																		
2 - FUNCTIONS																			
• 5/2 Bistable	5/3 Pressure exhausted neutral																		
• 5/2 Bistable 14 prioritised	5/3 Pressure held neutral																		
• 5/2 Air-return monostable	5/3 Pressure applied neutral																		
• 5/2 Spring-return monostable	Pneumatic or electric piloting mode																		
3 - INSTALLATION																			
• Mounting interface for sub-bases according to	ISO 5599-1																		
• Recommended torque on sub-bases	DX1 : 3 Nm, DX2 : 4 Nm, DX3 : 8 Nm																		
• Electrical connection of the protective earth on the cover	with M5x10 clamping screw																		
• Connection of the subbase to protective earth	by positioning the selector plate																		
• Selection of internal or external pilot supply	by positioning the selector plate																		
With an electric pilot:																			
• Mounting interface for the electric operator	CNOMO 06-05-10																		
• Mounting with one of the following pilot operators:	EV3000200, EV3001200, EV3003200, 1EV0*310, 1EV1*310, 1EV3*310																		
equipped with an ATEX solenoid type	EV30.A.EX...																		
WARNING																			
• Conditions for installing the product have to comply with specifications mentioned in chapters 1 and 3. • Before maintenance on the product, stop the air and ensure that pipes are exhausted. Then proceed. • The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category. • Product cleaning should be done by a method complying with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm. • The installation and maintenance of the product must be done by qualified personnel.

85 °C	Temperature class (T6)																		
The maximum ambient temperature (Ta) of the equipment or of the subassembly incorporating ISOMAX valves will be defined as: - (Ta) of the element having the lowest limit if this one is <60°C. - 60°C if elements other than the valve have a (Ta) > 60°C.																			
DECLARATION OF CONFORMITY																			
We, Parker Hannifin France S.A.S. Etablissement d'Evreux Rue H. Becquerel - BP 3124 27031 EVREUX CEDEX - France																			
hereby declare that the following ISOMAX pneumatic valves: - DX1 ..., DX2 ..., DX3 ..., followed by a "-EX" suffix, are compatible for use in explosive atmosphere II 2 GD (zones 1, 2 and 21, 22). These products are designed and manufactured in compliance with the European Directive: - 94/9/EC, March 1994, "ATEX". The present declaration is based on the compliance with the following standards: - Standard EN 13463-1, 2001 and AC:2002, Non-electrical equipment for potentially explosive atmospheres. Part 1: Basic methods and requirements, - Standard EN 13463-5, 2003, Non-electrical equipment intended for use in potentially explosive atmospheres. Part 5: Protection by constructional safety "c". Type examination certificate: LCIE 04 ATEX 6165X Delivered by: LCIE Additional information: These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as operations required for the installation and the maintenance of these products are complying with related standards. The user will have to comply with procedures for getting an approval of the final assembled system according to related regulations. Issued at Evreux Date : January 24 th , 2007 CE marked: 2004

2 - FUNCTIONS Pre-wired 3/2 NC Operator.		2 - FONCTIONS Electrovanne 3/2 NF pré câblée.																																					
3 - INSTALLATION - Dimensions of mounting interface 22x30 mm - Screw for mounting the armature M12 x 0,5mm - Max torque for the armature 6 Nm maxi - Recommendation for a cabinet - SAREL : SPACIAL 3D, type 83... - RITTAL : type KEL EX or equivalent - Maximum number of operators 100% ED 4 in an envelope of 8 dm³ - Electrical connection by a cable pre-wired on the operator ZP+E, 3 x $\varnothing$ 0,75 mm² (yellow-green for Earth) - Connector Not removable - Torque for fastening the connector 0,3 to 0,5 Nm		3 - INSTALLATION - Dimensions of the interface mécanique 22x30 mm - Fixation du noyau par vis de M12 x 0,5mm - Couple de serrage du noyau 6 Nm maxi - Préconisation pour montage en enveloppe - coffret SAREL : SPACIAL 3D, type 83... - coffret RITTAL : type KEL EX ou équivalent - Nombre maximum d'électrovannes 4 en service continu dans une enveloppe de 8 dm³ - Raccordement électrique par cordon pré-câblé sur la bobine ZP+T, 3 x $\varnothing$ 0,75 mm² (fil jaune-vert pour la terre) - Connecteur Non débrochable - Couple de serrage du connecteur 0,3 à 0,5 Nm																																					
WARNING - Conditions for installing the operator must comply with specifications mentioned in chapters 1 and 3. The permanently connected cable must be terminated according to one type of protection described in EN 60079-0 standard - Installing the operator in a cabinet rated IP40 or more requires a provision for exhaust by either funneling or with a muffler. - Before energising, ensure that the voltage of the supply is the same as the voltage marked on the coil. - Before maintenance operations, stop the air and electrical supply and ensure that pipes are exhausted. Then disconnect the 3 wires and proceed. Check the state of the 3 wires. - The replacement of the product or of one of its parts must be done with a product or a part of the same ATEX category. - Cleaning operations should be done in compliance with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products. The deposit of dust should not exceed 5 mm. - The installation and maintenance operations must be done by qualified personnel.		ATTENTION - Le produit doit être installé dans un environnement conforme aux spécifications des chapitres 1 et 3. L'extrémité libre du câble de connexion soldée doit répondre à l'un des types de protection décrits dans la norme EN 60079-0. - L'installation du produit dans une enveloppe classée IP40 ou plus nécessite de ménager une mise à l'échappement canalisée ou par silencieux. - Avant mise sous tension, s'assurer de la parfaite concordance de la tension entre la bobine et l'alimentation électrique. - Avant toute opération de maintenance, couper l'air comprimé et l'alimentation électrique. S'assurer que le circuit est purgé puis débrancher le câble électrique. Vérifier l'état du câble. - Le remplacement du produit ou de l'un de ses composants doit être effectué avec un produit ou un composant de même catégorie ATEX. - Les opérations de nettoyage seront réalisées conformément aux spécifications ATEX de l'installation, de préférence par aspiration et/ou par utilisation de produits antistatiques. Le dépôt de poussière ne doit pas excéder 5 mm. - L'installation et les opérations de maintenance doivent être effectuées par du personnel qualifié.

hereby declare that the following electro-pneumatic valves: - type PVA-F102BX... and P2FS... are compatible for use in explosive atmosphere II 2 GD (zones 1, 2 and 21, 22). These products are designed and manufactured in compliance with the European directive: - 94/9/EC, March 1994, "ATEX" The present declaration is based on the compliance with the following standards: - standard EN 60079-0, 2006, electrical apparatus for explosive gas atmospheres. Part 0 : General requirements. - standard EN 60079-7, 2003, electrical apparatus for explosive gas atmospheres. Part 7 : Increased safety "e". - standard EN 61241-1, 2006, electrical apparatus for use in the presence of combustible dust. Part 1 : Protection by enclosures "ID".		déclarons que les distributeurs électro-pneumatiques : - type PVA-F102BX... et P2FS... sont utilisables en atmosphère explosive II 2 GD (zones 1, 2 et 21, 22). Ces produits sont construits conformément aux dispositions de la directive européenne : - 94/9/CE, mars 1994, "ATEX" La présente déclaration est effectuée sur la base de la conformité aux normes suivantes : - norme EN 60079-0, 2006, matériel électrique pour atmosphères explosives gazeuses. Partie 0 : Règles générales. - norme EN 60079-7, 2003, matériel électrique pour atmosphères explosives gazeuses. Partie 7 : Sécurité augmentée "e". - norme EN 61241-1, 2006, matériels électriques pour utilisation en présence de poussières combustibles. Partie 1 : Protection par enveloppes "ID".

30mm CNOMO Operator System

Type P2FSB.2EX et P2FSB.3EX
Solenoid type P2FSB.A2EX... et P2FSB.A3EX...

1 - SPECIFICATIONS

Solenoid	P2FSB.A2EX...	P2FSB.A2EX...	P2FSB.A3EX...
Operating temperature (Ta)	-15°C to +50°C (+5°F to +122°F)	-15°C to +50°C (+5°F to +122°F)	-15°C to +50°C (+5°F to +122°F)
Operating voltages	24, 48 Vdc	24, 48, 115, 230 Vac	24, 48 Vdc
Voltage Tolerance	-10% to +10%	-10% to +10%	-10% to +10%
Duty factor	100%	100%	100%
Consumption	3 W	3,2 VA	3,8 W
ATEX temperature class	T5	T5	T4

Assembly with operators:

- Association with operators types: EV000000, EV000100, EV000300, 1EV0310, 1EV0310, 1EV0310
- Operators interface: CNOMO 06-05-10
- IP level: IP66 (EN 60529)
- Operating position: Any position
- Operating pressure: 0 to 10 bar
- Air condition: ISO 8573-1: - Filtered air or inert gas class 5
- Dry air or inert gas class 4

2 - FUNCTIONS
3/2 CNOMO Operator System for piloting pneumatic valves.

3 - INSTALLATION

- Association with operators: see chapter 1
- Electric connection on the equipment: 3 wires Ø 0,75 mm², 2P+E (yellow-green for Earth)
- Connection of the connector's body to earth: optional
- Tightening torque on valves: 1,5 Nm

WARNING

- The installation must be done in compliance with specifications mentioned in chapters 1 and 3. The permanently connected cable must be terminated according to one type of protection described in EN 50014 standard.
- If the installation is done in a cabinet rated IP40 or more, it is necessary to have a provision for exhaust by either turning on with a muffler.
- Before energizing, ensure that the voltage of the supply is the same as the voltage marked on the coil.
- Before maintenance operations, stop the air and electrical supplies and ensure that the pipes are exhausted. Then disconnect the 3 wires and proceed.
- The replacement of the product or one of its parts must be done with a product or a part having the same ATEX category.
- Cleaning operations should be done in compliance with the specifications of the ATEX zone, preferably by aspiration and/or utilization of antistatic products.
- The installation and maintenance operations must be done by qualified personnel.

4 - ATEX CLASSIFICATION and SOLENOID MARKING II 2 GD Ex mb II T (*) IP66 T (**)

Logo	Specific logo for safety in hazardous atmospheres
II	Group II: Atmospheres other than in mines
2	For use in zones 1 and 21
GD	Gas or Dust Atmospheres
Ex	Compliance with CENELEC standards
m	Protection mode: "m" encapsulation
T (*)	Temperature class: - T5 (100°C) for EV00.A2EX... - T4 (135°C) for EV00.A3EX...
T (**)	Maximum surface temperature: - 100°C for EV00.A2EX... - 135°C for EV00.A3EX...

Operator system:
The installation of the Operator system in compliance with chapters 1 and 3 ensures an ATEX classification category 2, for utilisation in zones 1, 2 and 21, 22 for Gas and Dust atmospheres.

Incorporation in an equipment:
Maximum ambient temperature (Ta) of the equipment or of the subassembly incorporating this product:
- (Ta) of the element having the lowest limit (Ta) must be < 60°C,
- 60°C if elements other than the solenoid have a (Ta) > 60°C.

30mm CNOMO 30mm

Type P2FSB.2EX et P2FSB.3EX
Bobine type P2FSB.A2EX... et P2FSB.A3EX...

1 - SPECIFICATIONS

Bobine	P2FSB.A2EX...	P2FSB.A2EX...	P2FSB.A3EX...
Température de service (Ta)	-15°C à +50°C	-15°C à +50°C	-15°C à +50°C

Tolérances de tension	-10% à +10%	-10% à +10%	-10% à +10%
Taux de charge	100%	100%	100%
Puissance consommée	3 W	3,2 VA	3,8 W
Classe de température ATEX	T5	T5	T4

Assemblée avec les opérateurs:

- Association avec les opérateurs: EV000000, EV000100, EV000300, 1EV0310, 1EV0310, 1EV0310
- Interface des opérateurs: CNOMO 06-05-10
- Indice de protection: IP66 (EN 60529)
- Position de fonctionnement: Indifférente
- Pression de service: 0 à 10 bar
- Fluide admissible et qualité: ISO 8573-1: - Air ou gaz neutre filtré classe 5
- Air sec ou gaz neutre classe 4

2 - FONCTIONS
Électrovanne CNOMO 3/2 pour pilotage de distributeurs pneumatiques

3 - INSTALLATION

- Association avec les opérateurs: voir chapitre 1
- Raccordement électrique sur l'équipement: 3 fils de Ø 0,75 mm², 2P+T (jaune-vert pour la terre)
- Raccordement à la terre du corps du connecteur de la bobine: facultatif
- Couple de serrage sur les distributeurs: 1,5 Nm

ATTENTION

- L'installation doit être réalisée dans un environnement conforme aux spécifications des chapitres 1 et 3. L'extrémité libre du câble de connexion solide doit répondre à l'un des types de protection décrits dans la norme EN 50014.
- Si l'installation est réalisée dans une enveloppe classée IP40 ou plus, il est nécessaire de ménager une mise à l'échappement canalisée ou par silencieux.
- Avant mise sous tension, s'assurer de la concordance de la tension entre la bobine et l'alimentation électrique.
- Avant toute opération de maintenance, couper l'air comprimé et l'alimentation électrique. S'assurer que le circuit est purgé puis débrancher le câble électrique.
- Le remplacement du produit complet ou de l'un de ses composants doit être réalisé avec un produit ou un composant de même catégorie ATEX.
- Les opérations de nettoyage seront réalisées conformément aux spécificités ATEX de l'installation, de préférence par aspiration et/ou par utilisation de produits antistatiques.
- L'installation et les opérations de maintenance doivent être réalisées par du personnel qualifié.

4 - CLASSIFICATION ATEX et MARQUAGE BOBINE II 2 GD Ex mb II T (*) IP66 T (**)

Logo	Logo de référence pour la sécurité en atmosphères explosibles
II	Destination: Group II: Atmosphères de surface
2	Utilisation en zones 1 et 21
GD	Atmosphères de type gaz ou poussières
Ex	Conformité aux normes CENELEC
m	Mode de protection: "m" encapsulage
T (*)	Classe de température: - T5 (100°C) pour EV00.A2EX... - T4 (135°C) pour EV00.A3EX...
T (**)	Température maximale de surface: - 100°C pour EV00.A2EX... - 135°C pour EV00.A3EX...

Électrovanne:
L'installation de l'électrovanne conformément aux chapitres 1 et 3 assure une classification ATEX en catégorie 2, pour utilisation en zones 1, 2 et 21, 22 pour atmosphères Gaz et Pousière.

Incorporation dans un équipement:
Limite de température ambiante (Ta) de l'équipement ou de l'ensemble incorporant ce produit:
- (Ta) du composant ayant la limite la plus faible si celle-ci est < 60°C,
- 60°C si les constituants autres que la bobine ont une (Ta) > 60°C.

EC DECLARATION OF CONFORMITY

W/e, **Parker Hannifin France S.A.S.**
Etablissement d'Eureux
Rue H. Becquerel - BP 3124
27031 EVREUX CEDEX - France

heavily declare that the 30mm ATEX solenoids used for driving electro-pneumatic valves intended for use in explosive atmospheres # 2 GD in zones 1, 2 and 21, 22:

- types EV00.A2EX... and EV00.A3EX...

are designed and manufactured in compliance with the European directive:

- 94/9/EC, March 1994, "ATEX"

The present declaration is based on the compliance with the following elements:

- standard EN 50014, 1997 et A1, A2:1999, Electrical apparatus for potentially explosive atmospheres. General requirements.
- standard EN 60079-18, 2004, Electrical apparatus for explosive gas atmospheres. Part 18: Construction, test and marking of type of protection encapsulation "m" electrical apparatus.
- standard EN 50231-1-1, 1993 et A1:2002, Electrical apparatus for use in the presence of combustible dust - Part 1-1: Electrical apparatus protected by enclosures - Construction and testing

EC type certificate: CEST 05 ATEX 065 X
Quality assurance certificate: LCIE 03 ATEX Q 9037

Additional information:
These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as:
- these products are assembled with operators type EV000100, EV000200 or 1EV0310,
- operations required for installation and maintenance are complying with related standards. Each time this will be required for compliance purpose, the user will have to apply for a coverage of the final assembled equipment.

Issued at Eureux
Date: June 12th, 2005

Parker Hannifin France S.A.S.
Etablissement d'Evreux
Rue H. Becquerel - BP 3124
27031 EVREUX CEDEX - France

Hereby declare that the following electro-pneumatic valves:

- P2LX...A..., P2LX5...A....

Are compatible for use in explosive atmosphere II 2 GD (zones 1, 2 and 21, 22).

These products are designed and manufactured in compliance with the European Directive:

- 94/9/EC, mars 1994, "ATEX".

The present declaration is based on the compliance with the following standards, for the products indicated hereafter entering the composition of the unit above mentioned:

- P2LX... et P2LX5... type valves

II 2 GD c 135 °C

- standard EN 13463-1, 2001 and AC : 2002, Non-electrical equipment for potentially explosive atmospheres. Part 1: Basic method and requirements,
- standard EN 13463-5, 2003, Non-electrical equipment intended for use in potentially explosive atmospheres. Part 5: Protection by constructional safety "c".

EC DECLARATION of CONFORMITY

We, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel - BP 3124
27031 EVREUX CEDEX - France

hereby declare that the following components from the **Telepneumatic pneumatic logic range** :

- PLL-... / PLK-... / PLN-... / PLJ-C10 / ... Functions AND, OR, NOT, YES,
- PLM-... / PRD-... / PRF-... / PRT-... / ... Latch memory, Amplifier, Sensor, Timer,
- PSM-... / PSV-A1. Modular Sequencer,

are compatible for use in explosive atmosphere **II 2 GD (zones 1, 2 and 21, 22).**

These components are designed and manufactured in compliance with the European Directive:

- 94/9/EC, March 1994, "ATEX"

The present declaration is based on the compliance with the following standards:

- Standard EN 13463-1, 2001 and AC:2002, Non-electrical equipment for potentially explosive atmospheres. Part 1: Basic methods and requirements
- Standard EN 13463-5, 2003, Non-electrical equipment intended for use in potentially explosive atmospheres. Part 5: Protection by constructional safety "c".

Type certificate: **LCIE 04 ATEX 6164X**

Delivered by: **LCIE**

Additional information:

These products are designed for utilization in applications falling under the scope of the ATEX Directive 94/9/EC. This coverage could only be referred to as long as operations for the installation and the maintenance of these products are complying with related standards.

The user will have to comply with procedures for getting an approval of the final assembled system according to related regulations.

DECLARATION CE de CONFORMITE

Nous, **Parker Hannifin France S.A.S.**
Etablissement d'Evreux
Rue H. Becquerel - BP 3124
27031 EVREUX CEDEX - France

déclarons que les composants de la gamme de logique pneumatique **Telepneumatic référencés** :

- PLL-... / PLK-... / PLN-... / PLJ-C10 / ... Fonctions ET, OU, NON, OUI,
- PLM-... / PRD-... / PRF-... / PRT-... / ... mémoire, amplificateur, capteur à fuite, temporisateur,
- PSM-... / PSV-A1. séquenceur modulaire,

sont utilisables en atmosphère explosive **II 2 GD (zones 1, 2 et 21, 22).**

Ces composants sont construits conformément aux dispositions de la directive européenne:

- 94/9/CE, mars 1994, "ATEX"

La présente déclaration est établie sur la base de la conformité aux normes suivantes :

- norme EN 13463-1, 2001 et AC:2002, Matériel non électrique pour utilisation en atmosphères explosibles. Partie 1 : prescriptions et méthodes de base,
- norme EN 13463-5, 2003, Appareils non électriques destinés à être utilisés en atmosphères explosibles. Partie 5: Protection par sécurité de construction "c".

Attestation d'examen de type : **LCIE 04 ATEX 6164X**

Délivrée par : **LCIE**

Information complémentaire :

La conception de ces produits permet leur utilisation dans un environnement soumis à l'application de la Directive ATEX 94/9/CE sous réserve que les opérations nécessaires à leur installation et à leur maintenance soient effectuées en conformité avec les dispositions des normes en vigueur.

L'utilisateur prendra en charge la mise en conformité de l'installation finale conformément à la réglementation en vigueur.

Fait à Evreux

Date : 24 janvier 2007

Date d'application marquage CE : 2004

DECLARATION OF CONFORMITY (ATEX)

We **Parker Hannifin Ltd.**
Pneumatic Division
Walkmill Lane
Bridgtown
Cannock
Staffs
WS11 0LR

Declare that the following product families are non electrical and have been assessed in accordance with ATEX 94/9/EC (products for use in potentially explosive atmospheres). Electrical items supplied with any of the listed products will have their own Declaration of Conformities: -

Global Air Preparation

..... Referenced Normative Documents

EN13463 Non-electrical equipment for potential explosive atmospheres

..... Equipment Group and Category classification

II 3 GD 80⁰ C - Self Certification

..... In addition

We have conducted a hazard risk assessment analysis and concluded that the products do not possess their own potential ignition source. The basis of this declaration is the self-ignition hazard assessment on representative test samples of the product family.

For Parker Pneumatic Division, Cannock

David G E Davies

Product	Series	Category
Filter*	P31FA, P32FA, P33FA	for zone 1, 21
Regulator	P31RA, P32RA, P33RA	for zone 1, 21
Filter regulator*	P31EA, P32EA, P33EA	for zone 1, 21
Lubricator*	P31LA, P32LA, P33LA	for zone 1, 21
Ball Valve & Slide Valve	P31VA, P32VA, P33VA	for zone 1, 21
Manifold	P31MA, P32MA, P33MA	for zone 1, 21

For non-fitted solenoid product

Soft Start & Dump Valve	P31TA, P32TA	for zone 1, 21
Soft Start Valve	P31SA, P32SA	for zone 1, 21
Dump Valve	P31DA, P32DA	for zone 1, 21

*Filter, Filter Regulator and Lubricator – This evaluation applies to products fitted with metal bowls only.

Following Ignition Hazard Assessments performed on the non-electrical products listed above, in accordance with the requirements of EN 13463-1:2009, it was considered that the equipment does not contain its own source of ignition, and therefore is not within the scope of directive 94/9/EC.

The products can be used in a Group II Category 2 environment assuming that the ATEX Directive and the following conditions are complied with:

- Installation and maintenance of the product must be undertaken by qualified personnel.
- Do not mount the products in an area where impact may occur.
- Filters must be used to limit the introduction of particles and to capture particles generated in service.
- Supply air quality must be within ISO 8573-1:2010 Class 1.4.2.
- Maximum working temperature to be as stated on product label.
- WARNING – pulsating pressure and/or a closed circuit can generate heat.
- Deposits of dust on the product must not exceed 5mm thickness.
Refer to technical file for surface areas of plastics.
The unit must be earthed via the compressed air supply line.
- The unit must not come into contact with liquid solvents, acids or alkalis.
Refer to technical file for chemicals known to be incompatible.
Product cleaning must be undertaken using a method complying with the specification of the ATEX zone, preferably by using mild soap and water or antistatic products.
- **Regulators, Filter Regulators:**
Do not use Regulators or Filter Regulators within systems that can create vibration within the Regulator/Filter Regulator unit.
- **Solenoid Operated Valves:**
Are suitable for use in an ATEX environment, (Group II Category 2) providing ATEX approved solenoids are fitted.
- Technical file available on request.
