History

From Rasm. Holbeck & Søn to Hymatik

Hymatik has its origin as a merchant business and is part of an almost 200-year-old history of industry in the city of Odense.

In 1830, Rasmus Holbeck, a merchant skipper from Odense, founded the company Rasm. Holbeck & Søn. The company mainly sold colonial goods, coal, metals, iron, steel, tubes, and kitchen/bathroom fixtures. In 1850, Rasmus Holbeck bought the property in Nørregade 69, where the company was located for many years (see the picture to the right).

In 1953, Rasm. Holbeck & Søn became part of the company - H. J. Hansen Group (Est. 1829), and the activities grew beyond the facilities in Nørregade. Therefore, a move was made to new premises in Victoriagade in the Odense harbor district.

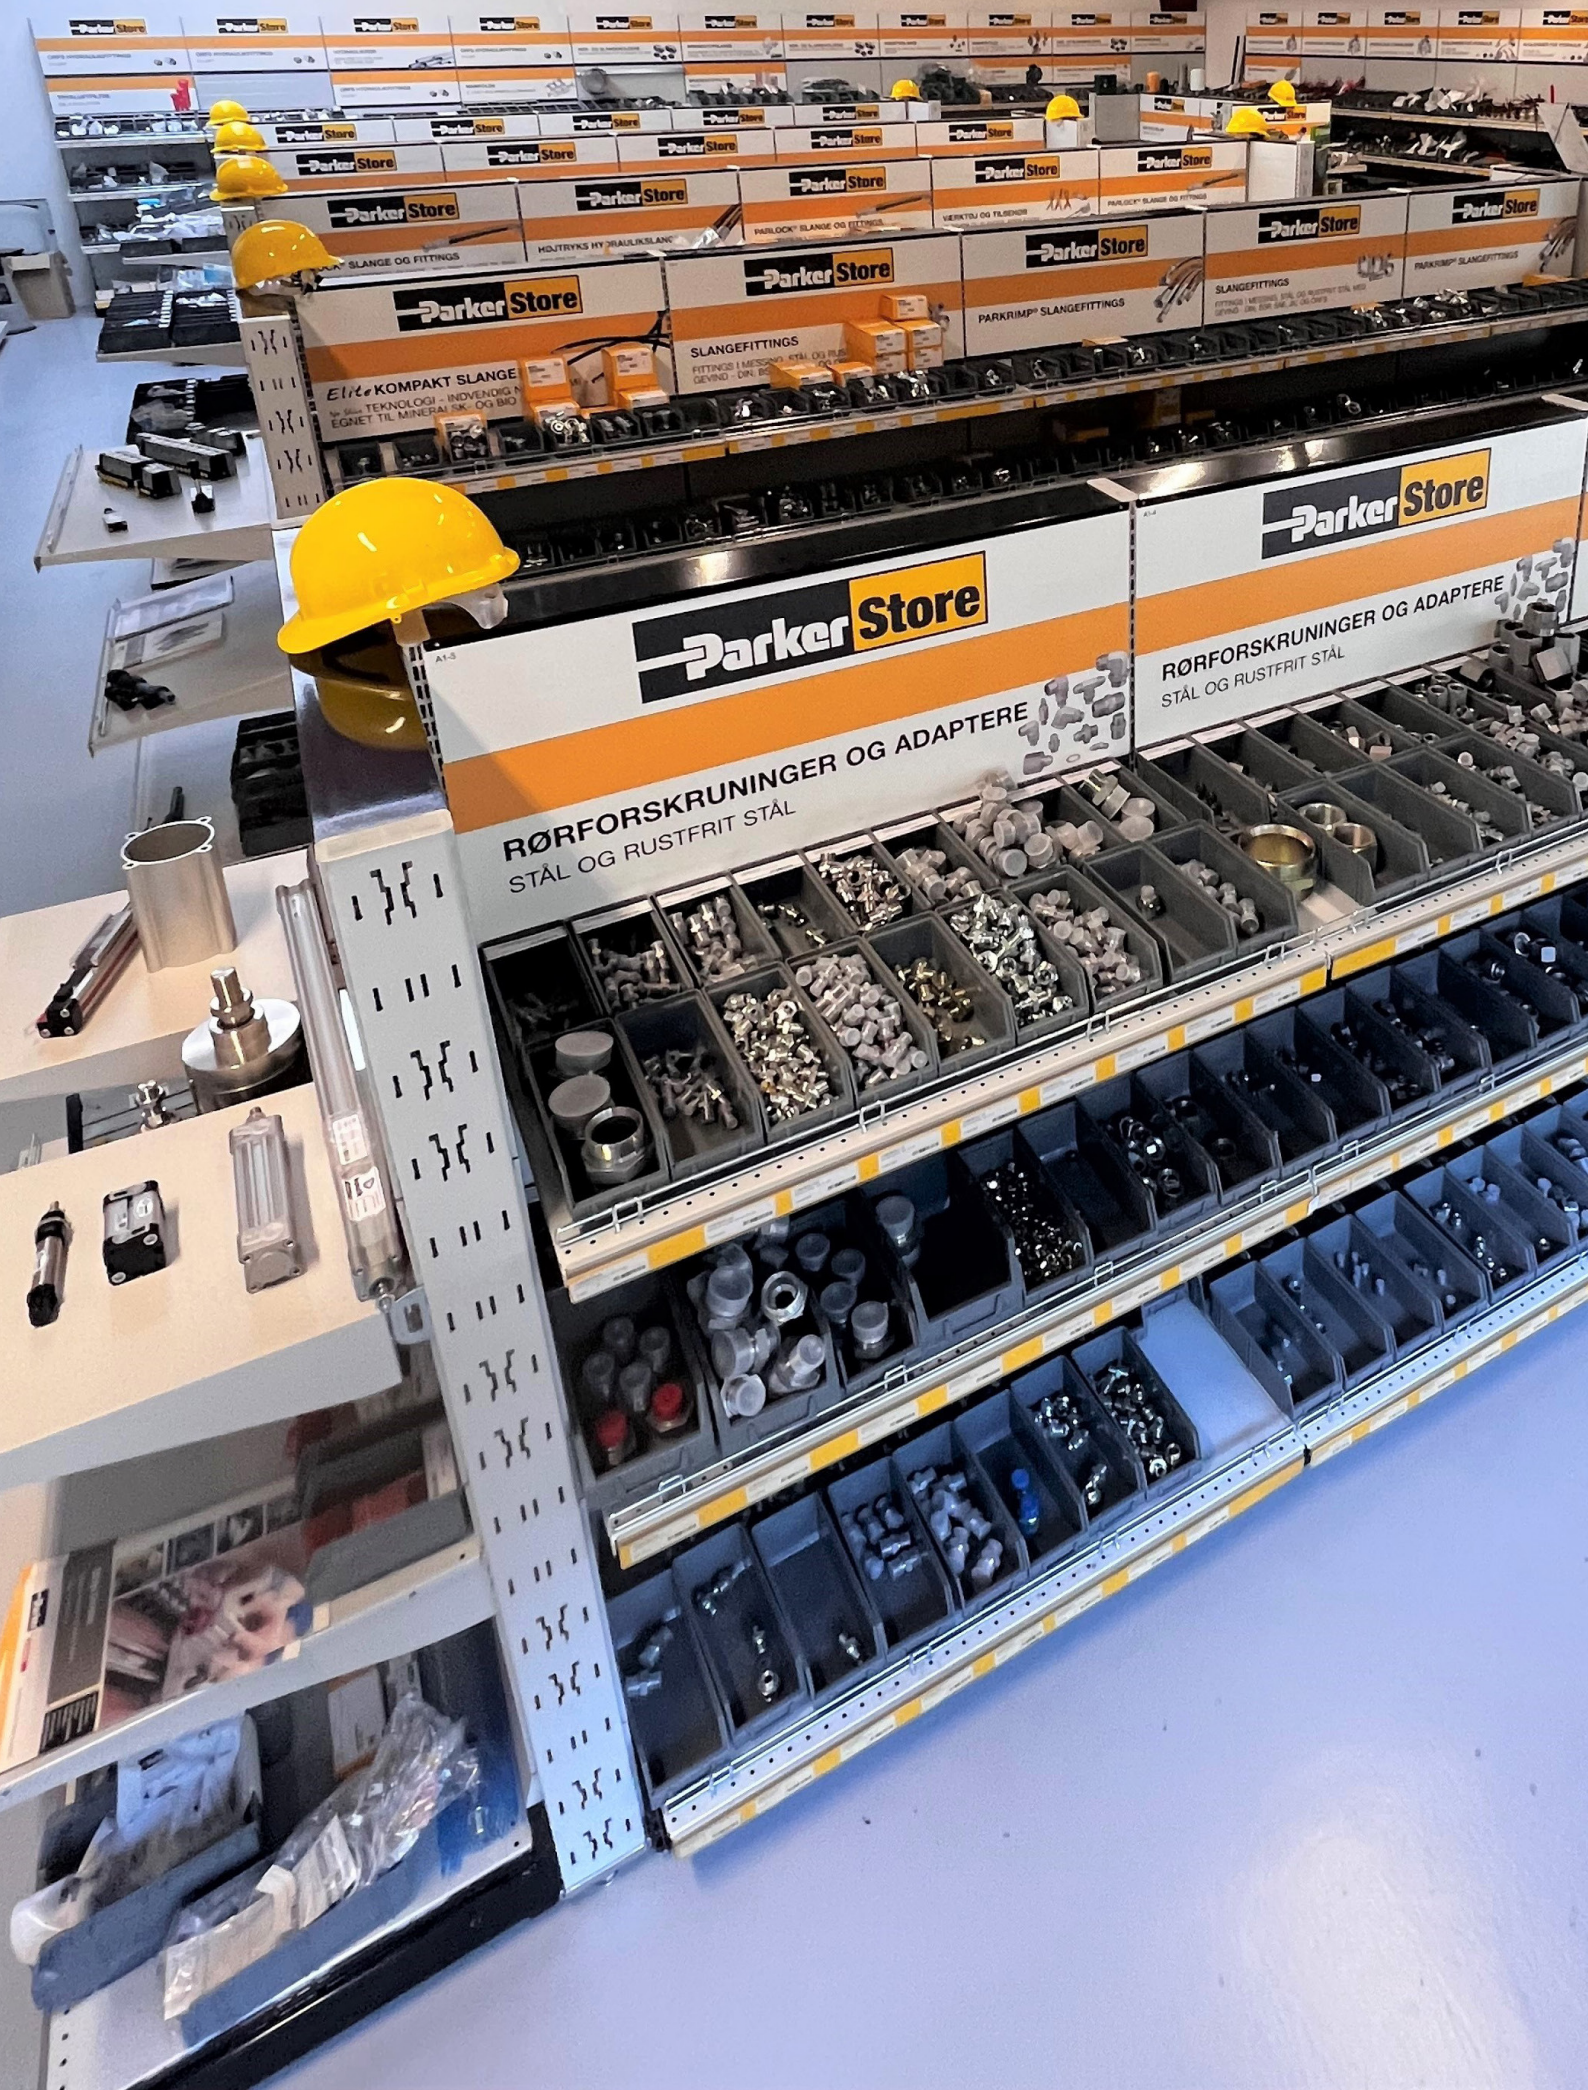

In 2017, the company H. J. Hansen sold off Rasm. Holbeck and the company became Rasm. Holbeck Hydraulik ApS. Today, the company name has changed to a more international sounding name - Hymatik ApS. The Store with its adjoining warehouse and workshop is located at Hvidkærvej 27A in Odense SV – close to the Funen motorway network.

Your local ParkerStore and total supplier of Parker products

Hymatik is a certified Parker distributor of motion & control technologies and systems with an associated ParkerStore, consisting of a store with warehouse facilities as well as a workshop for both ad-hoc and series production of hydraulic hoses.

We offer sales and sparring within the fields - hydraulics, pneumatics, instrumentation, filters, pumps, and more. Our core products include a wide range of hoses, fittings, adapters, valves, and tubes. We aim to be your leading service partner and total supplier.

As a certified Parker distributor, we have full access to Parker's entire product range in motion & control technologies, which includes more than one million item numbers.

Our goods can easily be accessed through our webshop by product name and item number, when it's convenient for you.

Services

We help you keep your business running

Assembly of hydraulic hoses – All hoses assembled in our workshop are provided with a unique PTS ID, which makes it quick, easy, and accurate to identify the hose and produce a new identical hose. Our staff and workshop are Parker certified, so you can expect the highest quality work.

Cutting hoses to length – With our automatic hose cutting machine, we can quickly and accurately cut hoses to your requested dimensions. This service is perfect for batch production, where hoses need to be cut to specific lengths.

Fast delivery – Stocked items can be delivered locally on Funen within 1-2 hours.

Customized kits – Order one single item number containing all the components you need, packaged to your specification, and delivered in one customized and organized kit.

24 hours service – If you have an urgent need for our services outside normal opening hours, we can open the store any time of the day for a fee (DKK 1500,- / EURO 200,-). Contact us by phone (+45 6312 8300).

Hose Doctor Service – We also offer to send a skilled Hose Doctor to your construction site or place of business to change a defective hose. 13 Hose Doctors in Denmark ensures that there is always one near you.

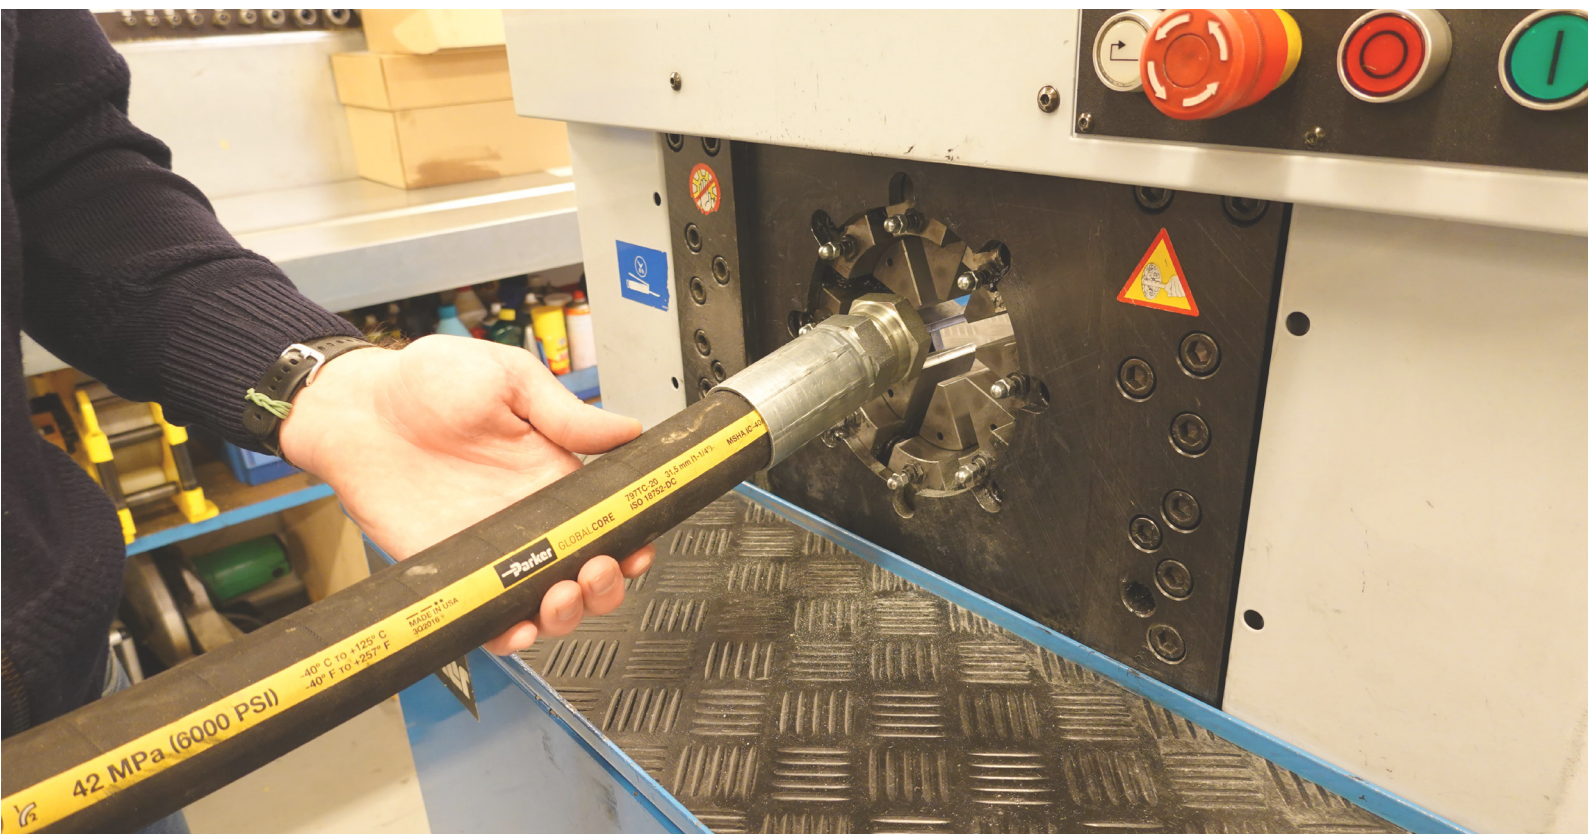

ParkerStore in Odense – Stop by our physical store, browse our 5,000 stocked items and meet our qualified staff. We are always happy to provide a cup of coffee and a professional talk.

Online Webshop – We have a large webshop, where you quickly can search among 1 million item numbers. Using our search filters, you can easily find what you are looking for. You can see inventory status and prices and place your order fast and easily.

Pressure testing with documentation – We have the equipment and tools to perform static pressure testing of hydraulic hoses using water-glycol at pressures of up to 1,500 bar and oil at pressures of up to 630 bar, with accompanying image documentation.

Professional sparring and guidance – We offer professional sparring and guidance in our ParkerStore, by phone or via email. You are always welcome to ask us directly, but you can also find many answers in our article and guide archive on our website.

Quality products – We offer quality products that comply with technical industry standards. Some of the product classification standards are DNV, MarED, LR.

Services

Kanban-solution

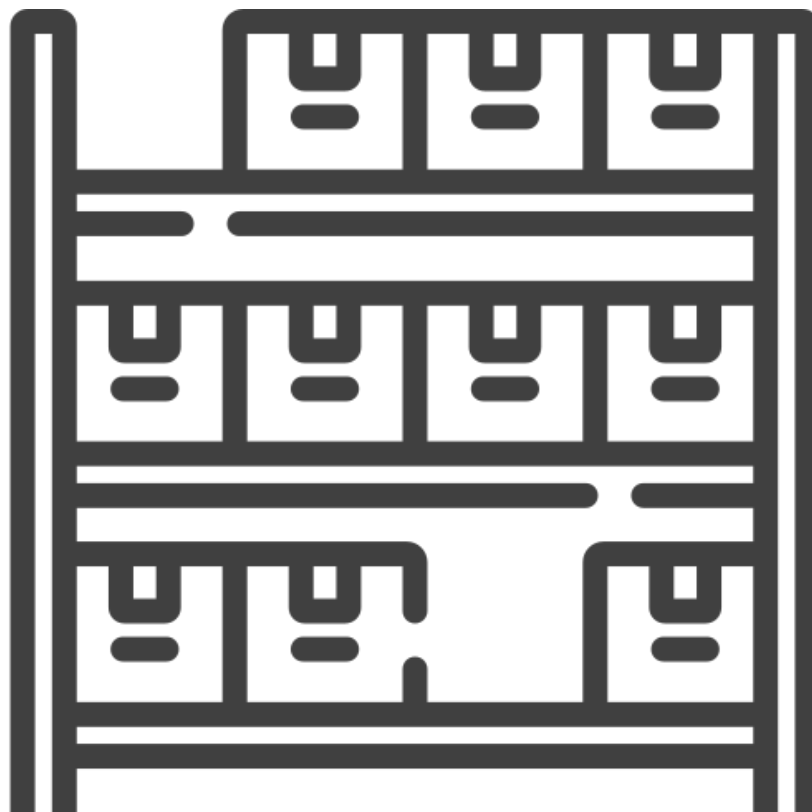

Custom inventory/storage solution for your company

We customize your inventory which gives you a great overview. We make sure you have the appropriate items on stock according to your needs.

With a Kanban solution we can minimize your time spent looking through your inventory trying to find which items need replenishing.

- Dynamic exchange of unused items.
- Setting up inventory/storage solutions.
- Supply agreement with supply reliability.

With a Kanban solution from Hymatik we can reduce your inventory size and the number of orders you need to place and ensure supply reliability.

Parker Tracking System™ **PTS – tagging of hydraulic hoses**

PTS – Quick and precise replacement of your hydraulic hose. Operational stops and associated machine downtime can be a costly and frustrating affair – but it should not be!

At Hyamatik we have implemented the Parker Tracking System (PTS), which we use to tag all hydraulic hoses with a unique PTS ID.

This unique PTS ID makes it possible to track exact product information and components associated with any given hose assembly – anytime and anywhere.

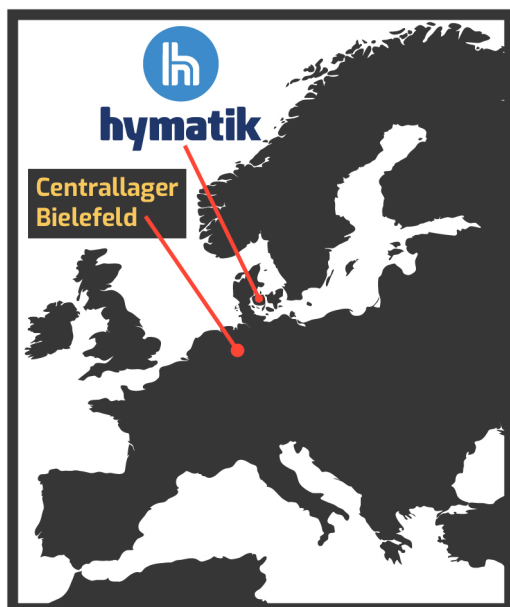

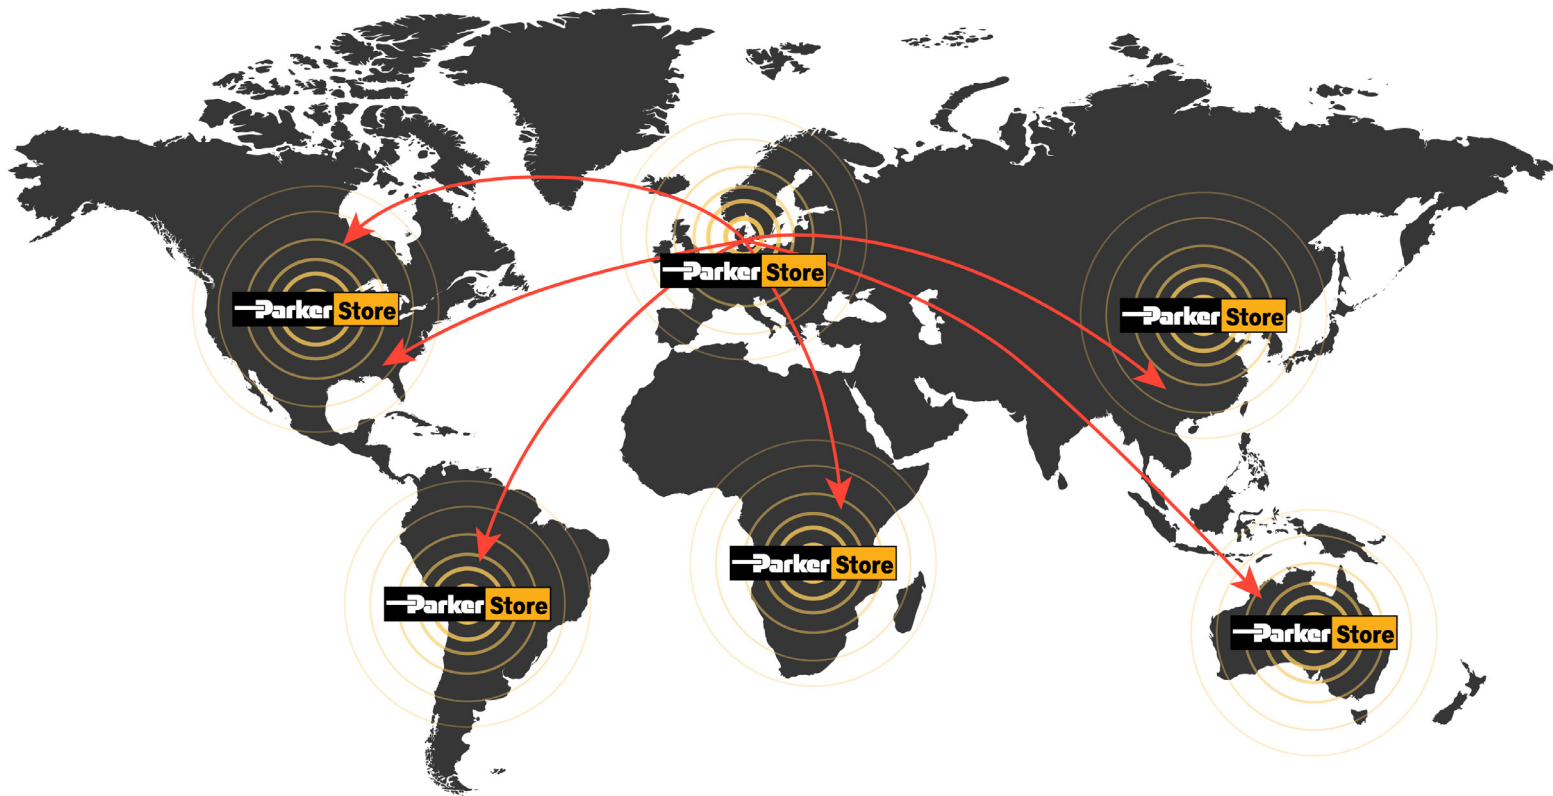

The unique PTS ID makes ordering a replacement hose fast, easy, and exact. This means you can minimize both downtime and the risk of mistakes during the ordering process.

Using the PTS system, we can produce your replacement hose within 20 minutes – all you need to do, is decide whether you want to pick up the hose at our workshop or have it delivered to you.

The Parker Tracking system creates value and efficiency!

Global Network

We deliver and ship worldwide

Access to Parker's product specialists.

5,000 items in our own stock in Odense.

100,000 items in central warehouse in Bielefeld, Germany.

Access to Parker's 323 factories around the world.

Access to 2500 ParkerStores around the world.

Access to more than 1200 HoseDoctors around the world.

Products & Brands

Parker Sub-Brands

Over the past two decades, Parker has acquired more than 70 market-leading manufacturers and brands, spanning a wide range products covering many different product categories. Therefore, we can offer our customers a wide range of quality products from brands like Legris, Olaer, Ermeto, SensoControl and many others.

At Hymatik, we aim to be technically well informed and up to date with new products and technologies. That is why we corporate with leading manufacturers on the market to distribute other brands that complement existing Parker brands.

These include UNIFLEX Hydraulics, FUCHS, NITO, Veidec, Claber, Compac and GP Batteries, all of which help to ensure the right solution for our customers.

Below you can see a selection of Parker's acquired brands and the complementary brands we currently offer.

Hydraulic

Solutions for your hydraulic application

We offer solutions for those who work with hydraulic applications such as construction machinery, industrial production, or maintenance of hydraulic applications.

Our range consists of a wide range of different high-quality hydraulic components. We have a full range of fittings in varied sizes and end configurations as well as hoses and tubes for different working pressures. We also have a wide selection of quick couplings, and other hydraulic components such as pumps, motors, cylinders, coolers, and accumulators.

You can access our range of hydraulic components and hydraulic hoses in our webshop at Hymatik.com.

Process/Instrumentation

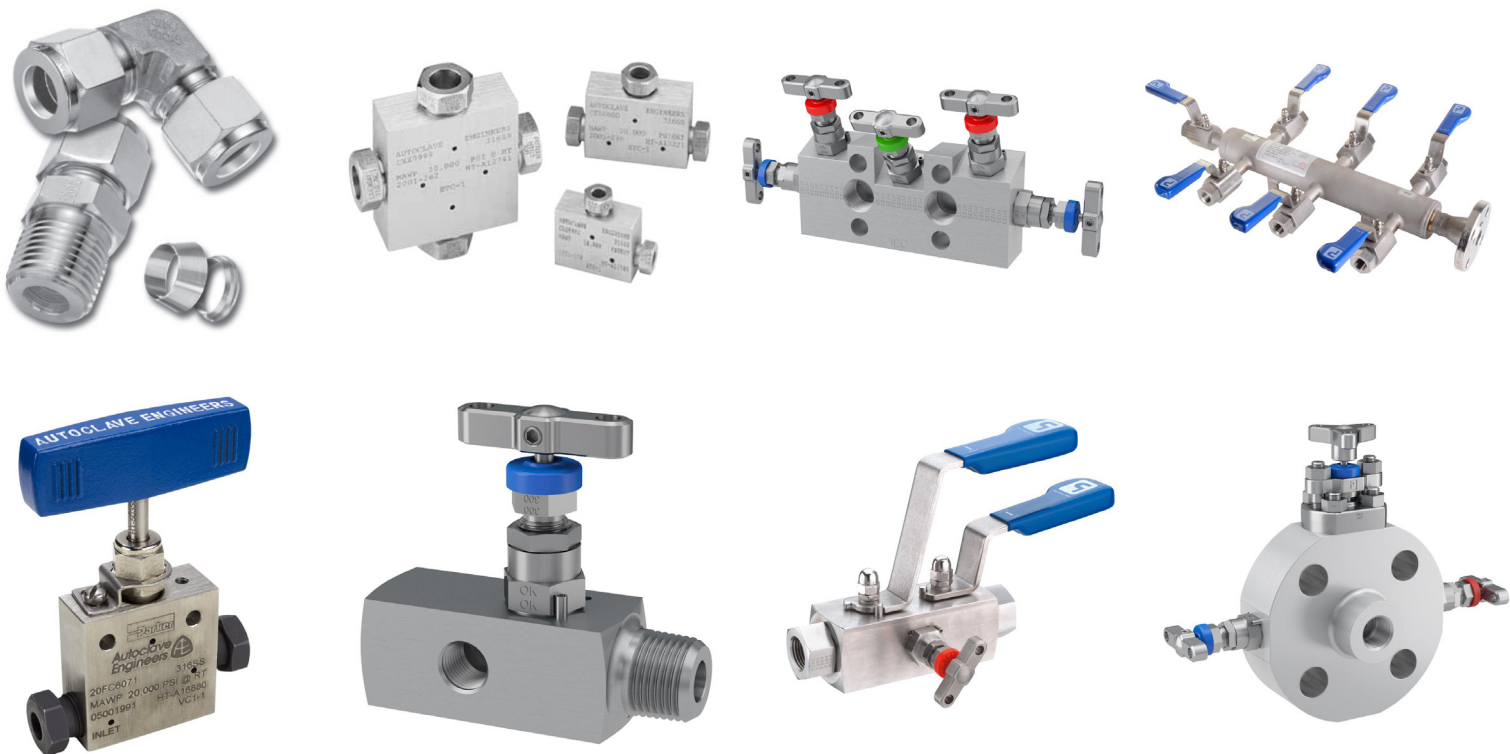

Components for process and instrumentation technology

At Hymatik, we supply a wide range of instrumentation components and systems for various pressure and temperature control of processes that help to reduce downtime and costs for our customers.

For instrumentation, we have the Autoclave Engineers series, which includes pipes, fittings, and valves. They are manufactured with the aim of increasing customer up-time in high-pressure industries.

Our popular instrumentation fittings CPI and A-Lok are designed for leak-free connections for process, oil, and gas applications. They are manufactured to the highest quality standards and are available in a wide range of sizes, materials, and configurations.

Parker process valves and manifolds are internationally recognized for high quality and reliability. They are available with different connections and in varied materials to match your application.

Pneumatic

Pneumatic solutions for those working in automation

As a ParkerStore, we offer a wide range of pneumatic components including push-in-fittings, tubing, quick couplings, cylinders, and valves. The listed product ranges within automation help to ensure greater reliability in your application.

LF3000 push-in-fittings is our standard series for compressed air applications. This series requires no special tools for assembly and its durability ensures long service life.

LIQUIfit fittings ensures optimal performance with its compact eco-design and as a result, it is perfect for industrial applications in the food and beverage industry.

Viking Xtreme valves are the perfect fit for the Nordic climate, meeting requirements of extreme weather conditions. The mobile industry in particular, benefits from the superior performance that ensures precise flow control.

Electromechanics

Components for electromechanical solutions

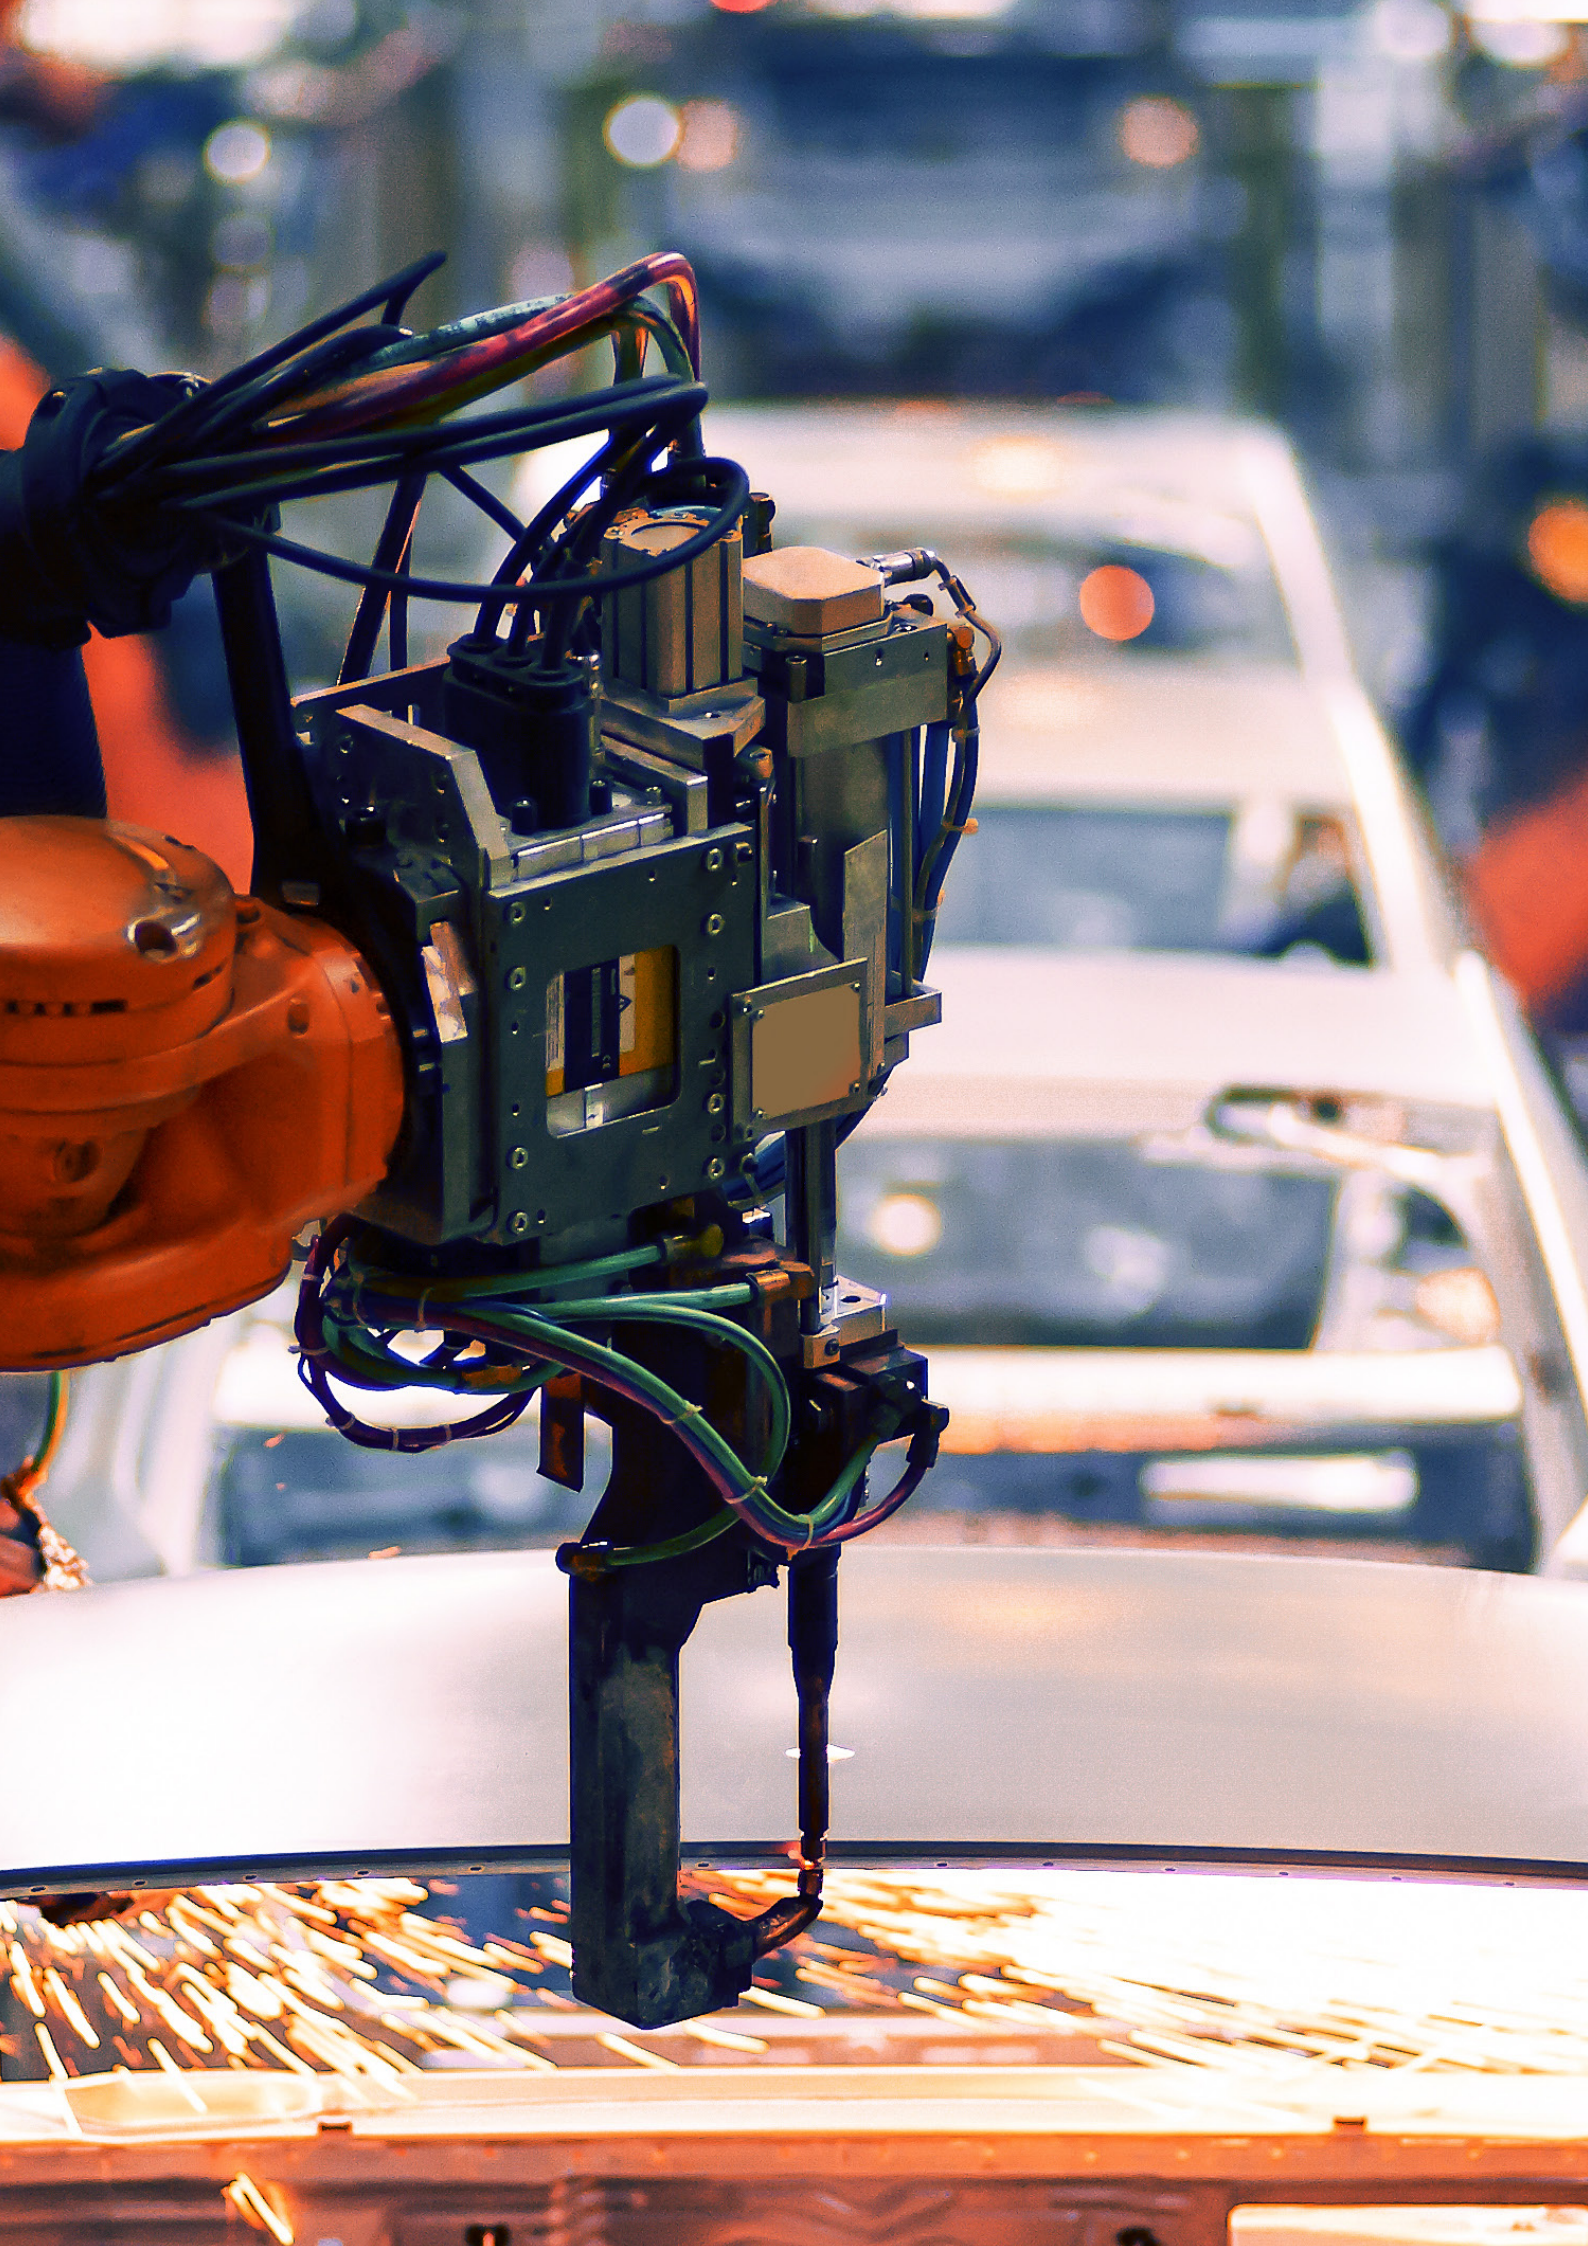

Our wide range of electromechanical components meet the requirements within automation, machine building and similar use cases.

This includes products like servo motors and drivers, linear actuators, linear guides with toothed belt and spindle. These components form the foundation for electromechanical systems used in industries where precise positioning, speed and torque control is essential.

These electromechanical components are used collectively to build systems that meet the requirements within industrial automation environments such as the pharmaceutical industry, metal production, internal transport, etc. The wide applicability of our electromechanical products gives you the opportunity to tailor solutions to your specific needs and ensure high precision and reliability in mechanical processes.

Parker's ETH series of electro cylinders excels compared to similar products on market, by having compact dimensions and high strength.

Filtration

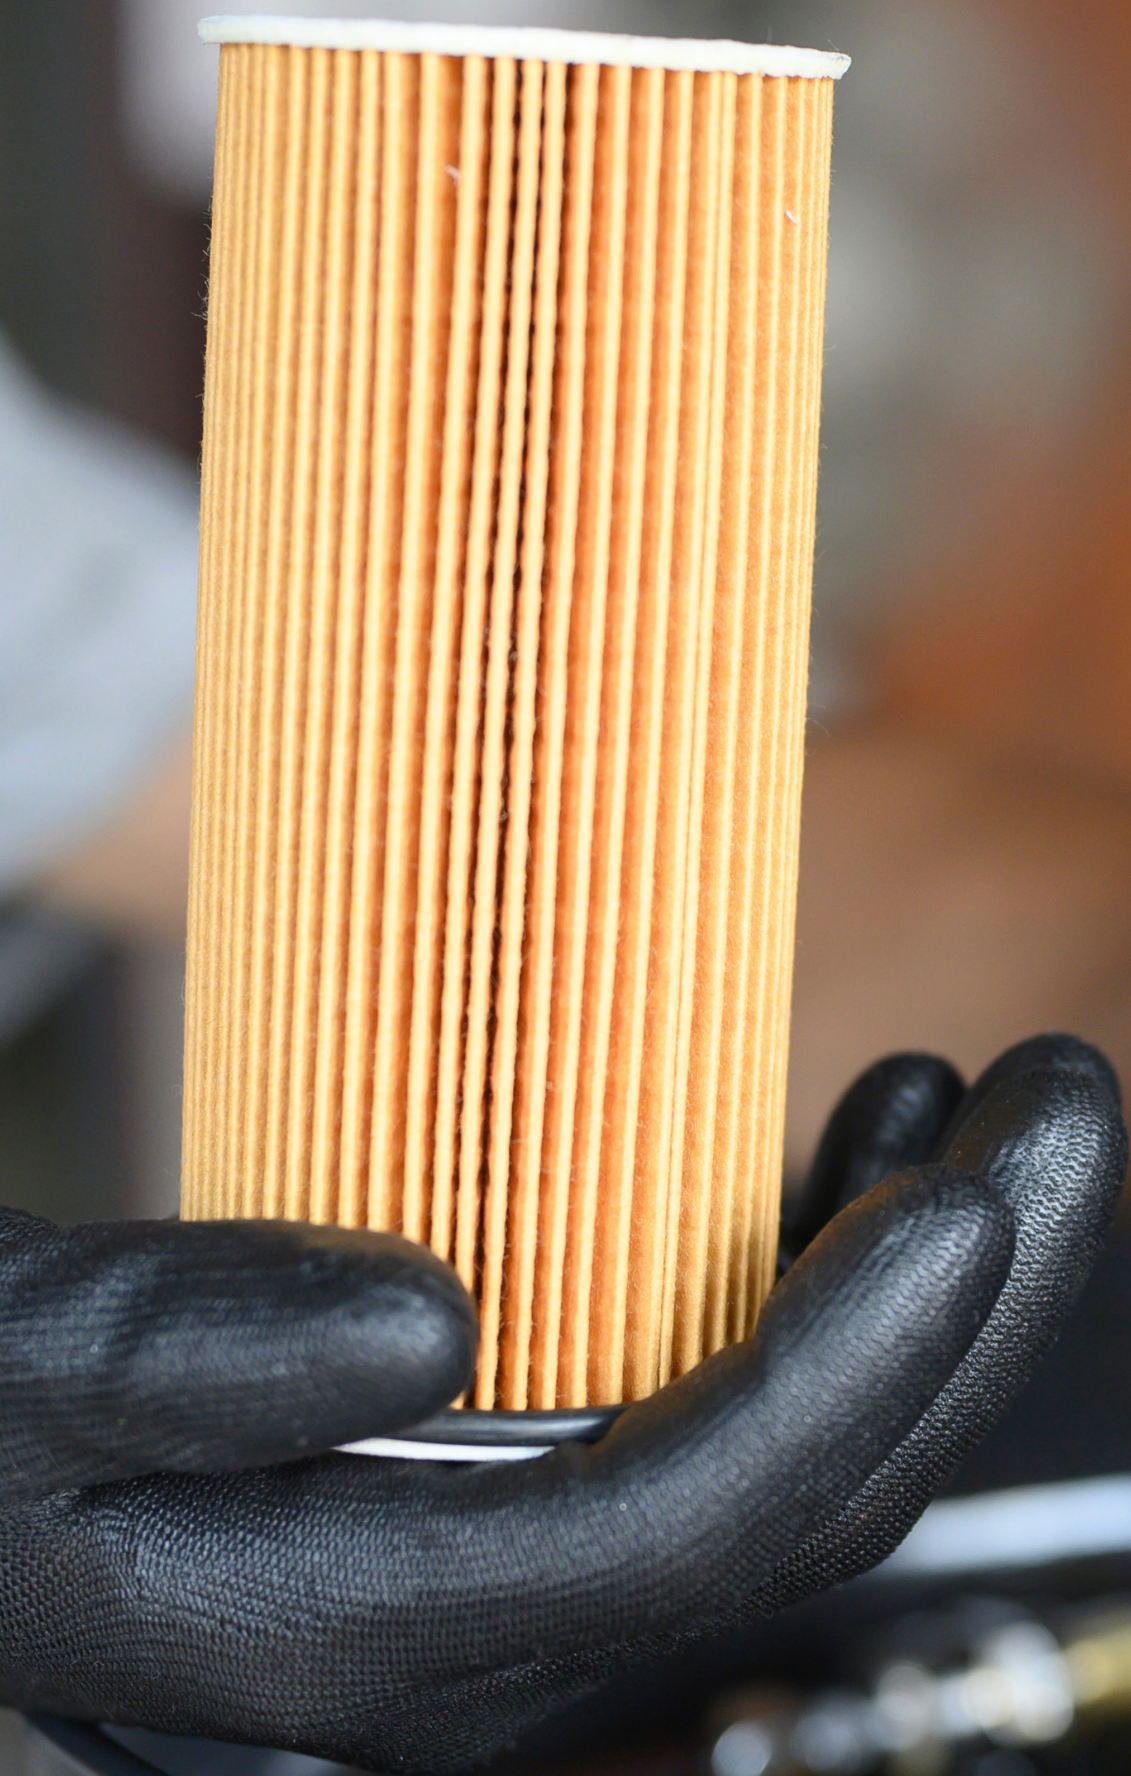

Quality filters for your application

We offer filtration products from Parker's entire product range. Our selection of Baldwin filters performs exceptionally well in harsh commercial vehicle operating conditions.

We can supply filters for fuel, hydraulics, lubrication, pneumatics, and compressed air, ensuring through extensive testing that products can withstand almost any working condition.

With our cross-reference tools we can convert all common filter brands to an equivalent Parker brand filter. You simply provide the filter's part number or machine/model number and then we will be well on track to finding the correct solution for you.

Machines

Machines for your workshop or service vehicle

Do you want to crimp your own hoses? Or bend your instrumentation tubes yourself? We have the solution for that too. We offer various machines and tools from both Parker Hannifin and other machine/tool manufacturers like UNIFLEX Hydraulic.

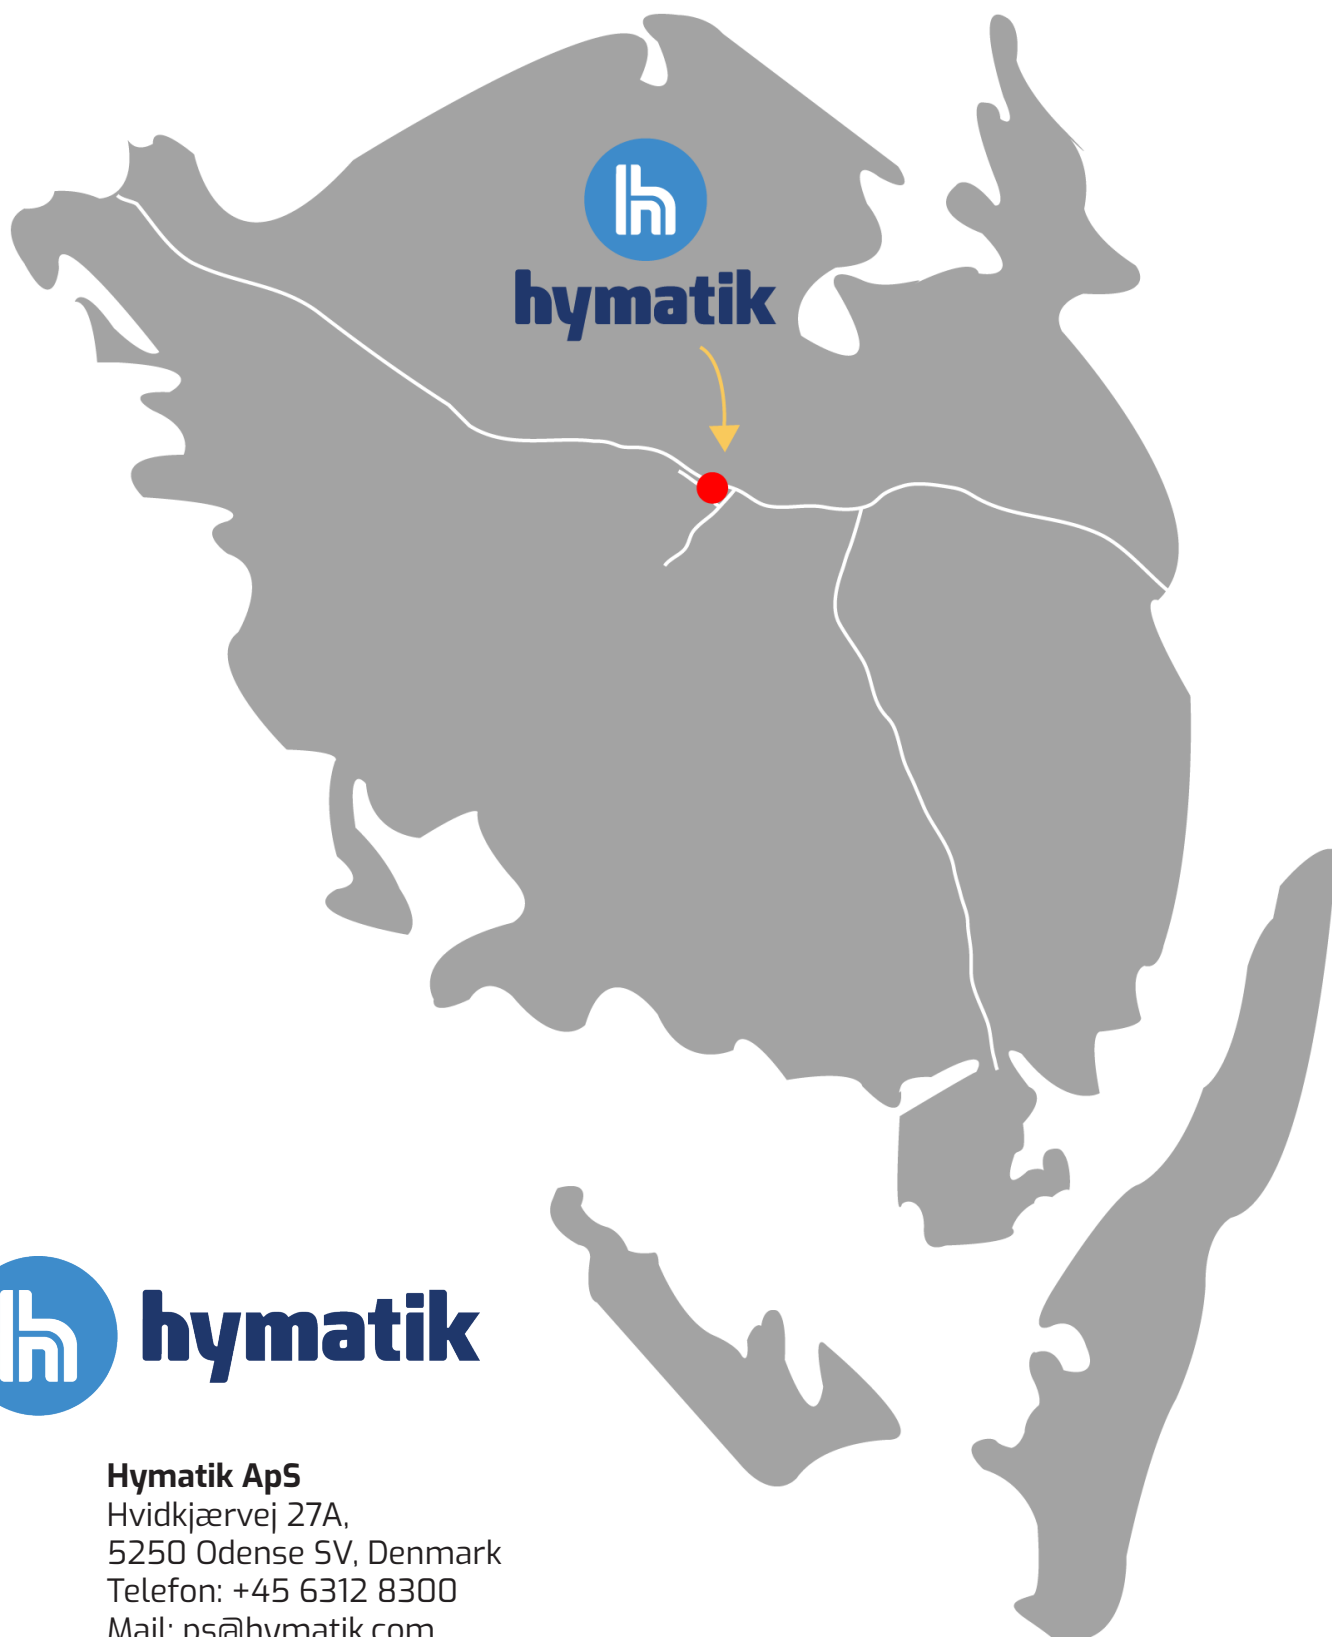

For hose production, we offer portable hose crimpers and cutting machines, which can easily be installed in a service vehicle and taken into the field and enable you to cut hoses to desired lengths, and crimp on fittings. We also offer larger hose presses that are particularly suitable for workshop use and series production.

For tube work, we offer various bending-, flaring-, and preassembly tools, as well as tube cutting machines. We also offer ferrule marking machines, test benches, cleaning machines, other accessories and tools.

Hymatik also rents out a range of machines and equipment. Equipment rental is often appropriate if you will not be using the equipment permanently and are looking for a cheap and quick solution rather than a large investment in machinery.
