**Heated Hose Sleeve**  
Unmatched Freeze Protection

ENGINEERING YOUR SUCCESS.

# EVERTHAW™

## Heated Hose Sleeve

When its cold out there, companies turn to Parflex for low temperature hose solutions. The newest, twenty first century hose improvement from Parker is the Everthaw heated hose sleeve from Parflex. Everthaw keeps hoses flexible while keeping the fluid in the hoses from freezing.

Assembly is easy and intuitive. Just wrap the sleeve around the target hose or tube, even on hoses that are already installed. The sleeve should be wrapped tightly in order to prevent shifting or relative movement during operation. This will also aid in keeping the heating elements and thermostat anchored in place.

### Application

- Hose and tubing applications where freeze protection for fluids containing water and/or water vapor is required
- Mobile equipment and vehicles with ability to provide either a 12V or 24V system voltage

### Series Everthaw Hose Protection Sleeve

Minimum O.D. Hose		Maximum O.D. Hose		Power Connection
inch	mm	inch	mm	
1	25.4	1-1/2	38.1	12V or 24V DC

### Construction

- Sleeve
  - Outer sleeve: Abrasion resistant nylon
  - Inside sleeve: Polyester felt insulation
  - High strength hook and loop closure

### Operating Parameters

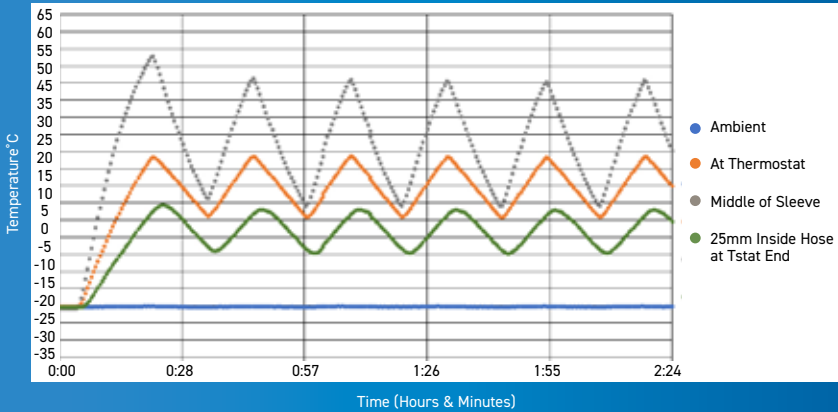

- Temperature Range: -40°F (-40°C) to 250°F (120°C)
- Electrical
  - Components: Heating elements and thermostat
  - Power Connection: 12V or 24V DC (The actual supply voltage should be 13.7V (12V systems) or 28.0V (24V systems).

- Thermostat Temperature Range:
  - Close temperature 41°F (5°C)
  - Open temperature 55°F (13°C)

### Notes

- Because of the potential for damage to the electrical components and inner hose/tube, care should be taken to not overtighten any additional items that compress the outside of the sleeve.

## EVERTHAW -20 °C PERFORMANCE

# THIS IS RELIABILITY

**EVERTHAW** ensures vehicles aren't downed by frozen hose.
