PARKER SERVO DRIVE - PSD

Overview

Description

The PSD1 is Parker Servo Drive family, available with different power rating from 2 to 30A and form factors. Today the offering contains:

- The PSD1-S is a standalone drive which can be connected directly to the main supply.
- The PSD1-M is a multi-axis servo system where each axis module can supply up to three servo motors.

The base configuration consists of a common DC bus supply and multiples PSD1-M modules, connected through DC bus bars. The modules are available as one, two or three axis versions. This makes the system highly flexible.

PSD1-M servo system is particularly suitable for all centralised automation systems, such as those found in many packaging machines, where large numbers of drives are often required offering significant advantages.

The PSD servo drive is available in two versions:

SPECIFIC FUNCTIONALITIES

Input & Output Option Board

With the additional I/O option board, the Parker Servo Drives are suitable for an even wider range of applications. The numerous in- and outputs can be used for a direct connection of sensors or as setpoint input (e.g. for current or velocity). The multifunctional encoder interface meets the requirements for a second encoder input (e.g. for internal load control) or an encoder emulation as an output.

8 Digital I/Os (switchable)

Digital Inputs

- Inputs according to IEC 61131-2 Type3
- Update rate 125µs

Digital Outputs

- High side switch
- Operation Voltage 12..30V
- Iout 70mA
- Short circuit protection to Output signal $\leq 250\mu\text{s}$

4 Analog Inputs

- Input Signal type
 - $\pm 10\text{V}$
 - $0..10\text{V}$
 - $0..20\text{mA}$
 - $4..20\text{mA}$ (Error detection)
- Resolution / Accuracy
 - 14Bit (12Bit ADC + 32x Oversampling)
- Update rate
 - $T_a \leq 125\mu\text{s}$
 - For setpoint and PLC issues $T_a \leq 500\mu\text{s}$

Encoder Interface

- Supported protocols
 - RS422 A/B Encoder with Index
 - RS 422 Step/Direction
- Power Supply for the external Encoder
 - 5V / 150mA
 - 24V (70mA)
- Update rate for load control $T_a \leq 125\mu s$
- Encoder Emulation
 - Max Frequency 400kHz (1460rpm@16384imp/U)
 - RS422 as physical layer
 - Supported types:
 - A/B Encoder signal with Zero pulse
 - Step/Direction
- Bypass function

1 or 2 option boards are possible per device.

Benefits:

- **Flexible & Cost-effective:** Wider choice of sensors. Saving costs by using sensors with standard interface instead of usually more expensive sensors with fieldbus interface.
- **Fast operation:** Achieving faster cycle times and less delay with direct connected sensors results in better performance of the closed loop controls.
- **Smart:** Small applications can be realized without external PLC
- **Support** for outdated technologies like PLCs with analog interface as setpoint channel to servo drives.

Safety configuration

The Parker Servo Drives have featured "Safe Torque Off" (STO) as standard function, helping to protect users and machinery against unexpected motor start-up. Performance Level PL=e according to EN ISO 13849. In order to fulfil the new machinery directive 2006/42/EG, the PSD can be equipped with a safety option board. The system does not need any additional wiring, as the Functional Safety over EtherCAT (FSoE) uses the existing wiring.

The Safety option board offers following safety functions:

Besides the functionality shown in the picture it is possible to choose the STO either as hardwired input or via FSoE. Safe Brake Control is available as well.

A few examples for the safety functions:

STO: Safe Torque Off

SS1: Safe Stop 1

SLS: Safe Limited Speed

SS2: Safe Stop 2

SOS: Safe Operating Stop
