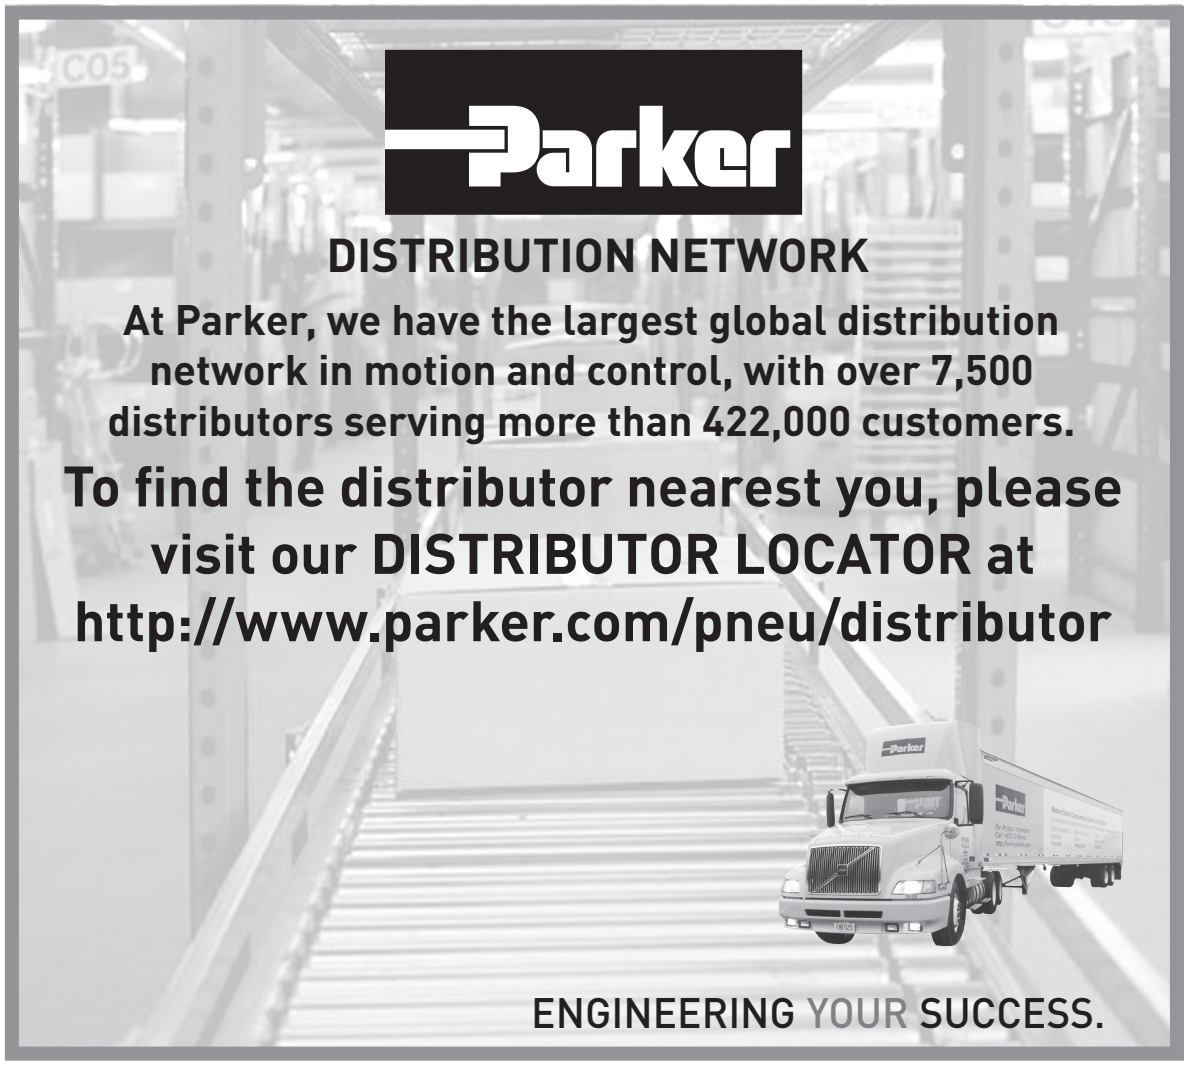
# Air Preparation Products

## Filters, Regulators, Lubricators, & Airline Accessories

Catalog 0700P-8 *(updated pdf)*

Parker

ENGINEERING YOUR SUCCESS.



## ⚠ WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application including consequences of any failure, and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

## Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated on the separate page of this document entitled “Offer of Sale”.

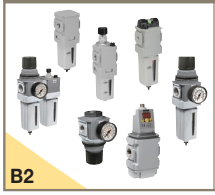
# Air Preparation Units

## Global FRL's



- Port size: 1/4 through 3/4 inch
- Maximum supply pressure: 300 psig
- Operating temperature: -13°F through 150°F
- Filters, regulators, filter / regulators, lubricators and accessories
- Modular construction

B2

## P3N Series FRL's

- Port size: 3/4 through 1-1/2 inch
- Maximum supply pressure: 250 psig
- Operating temperature: 32°F through 175°F
- High flow
- Filters, regulators, filter / regulators, lubricators and accessories

G2

## P3Y FRL's

- Port size: 3/4 through 1-1/2 inch
- Maximum supply pressure: 250 psig
- Operating temperature: -40°F through 140°F
- Filters, regulators, filter / regulators, lubricators and accessories
- Modular construction

C2

## General Industrial FRL's

- Port size: 1/4 through 6 inch flange
- Maximum supply pressure: 300 psig
- Operating temperature: 32°F through 212°F
- Filters, regulators, filter / regulators, lubricators and accessories

H2

## 14 Series FRL's

- Port size: 1/8 through 1/4 inch
- Operating temperature: -4°F through 175°F
- Maximum supply pressure: 300 psig
- Non-modular construction
- Ideal for OEM applications
- Filters, regulators, filter / regulators, and lubricators

D2

## Miniature / Inline FRL's

- Port size: 1/8 through 3/8 inch
- Operating temperature: -4°F through 175°F
- Non-modular construction
- Ideal for point of use applications
- Filters, regulators, filter / regulators, lubricators and accessories

J2

## Prep-Air II FRL's

- Compact & standard
- Port size: 1/4 through 3/4 inch
- Maximum supply pressure: 300 psig
- Operating temperature: -4°F through 175°F
- Point of use applications
- Modular construction
- Filters, regulators, filter / regulators, lubricators and accessories

E2

## Regulator Products

- Port sizes: 1/8 through 2 inch
- Maximum supply pressure: 300 psig
- Operating temperature: -40°F through 200°F
- Precision
- Electronic proportional
- General Regulators
- Water Regulators

K2

## Stainless Steel FRL's

- Port sizes: 1/4 and 1/2 inch
- Stainless steel construction handles most corrosive environments
- Maximum supply pressure: 300 psig
- Operating temperature -40°F through 180°F
- Meets NACE specifications MR-01-75/ISO 15156
- Filters, regulators, filter / regulators, and lubricators

F2

## Liquid Separators

- Port sizes 1/4 through 6 inch flange
- Designed in accordance with ASME
- Maximum supply pressure: 232 psig
- Operating temperature: 35°F through 175°F
- High liquid removal efficiencies at all flow conditions
- Low maintenance
- Suitable for variable flow compressors

L2

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

## Air Preparation Units

### Dryer Products

- Refrigeration (10-2400 scfm)
- Inline desiccant (15-60 scfm)
- Heatless desiccant dryers (40-800 scfm)

M2

## Accessories

### Airline Accessories

- Zero loss & timer drains
- Drains cocks
- Lockout valves
- AirGuard
- Mufflers

N2

## Part Number Index, Safety Guides, Offer of Sale

- Part Number to Page Number Index
- Safety Guide
- Offer of Sale

# PNEUMATIC DIVISION E-TOOLS

## Pneumatic Division Part Lookup Tool

### Part Lookup Tool Overview

The purpose of this application is to provide users with more in depth detail, such as replacement kits or current inventory for specific pneumatic part numbers. The tool also provides cross reference information for products that have been previously obsoleted. Searches can be made by searching a portion or all of a part number. Use the drop down options available to narrow your search.

#### Part Lookup Tool Contents

- Replacement KITs by part number
- Obsolete cross reference
- Inventory/stock levels
- Pricing (with distributor login only)
- Bulk part search
- Shipping location
- Lead time

### How to access the Tool

U.S. Parker Pneumatic Distributors

- **www.pdnpartlookup.com**
- **Or download the “Distributor Toolbox” app**

Guest Users

- **www.pdnplu.com**

## Pneumatic Division Size & Selection Calculators

### Size, Selection and Cost of Air Calculators Overview

The purpose of this application is to provide users and designers of pneumatic systems with a handy collection of compressed air cost calculators, conversion tools and air valve (Cv) and flow (SCFM) calculations for air cylinder actuation. The size and select calculators are available to anyone for use. See details below.

### How to access the Tool

- **www.parkerpdncalc.com**
- **Or download the “Pneumatics” calculator app**

#### Calculator Contents

- Cost calculator for leaks
- Cost calculator for compressors
- Cost calculator for reverse flow regulators
- Vacuum flow through an orifice
- Air flow through an orifice
- Annual cost of air cylinder operation
- Valve/FRL sizing for cylinder actuation
- And more!

# The Parker 5-Year Extended Warranty

Parker Hannifin Corporation will extend its warranty on all pneumatic components to sixty (60) months providing they are correctly installed and protected by Parker pneumatic filters which are properly maintained. Components covered by this warranty include all cylinders, valves, and pneumatic automation components manufactured by Parker in any of our global facilities. This warranty covers our components anywhere in the world you may ship your equipment.

Parker's obligation under this warranty is limited to the replacement or repair of any failed components. The buyer understands that the seller will not be liable for any other costs or damages.

The buyers of quality Parker components and filters benefit by having ONE source for all pneumatic needs - **Parker.**

**Jennifer Parmentier**

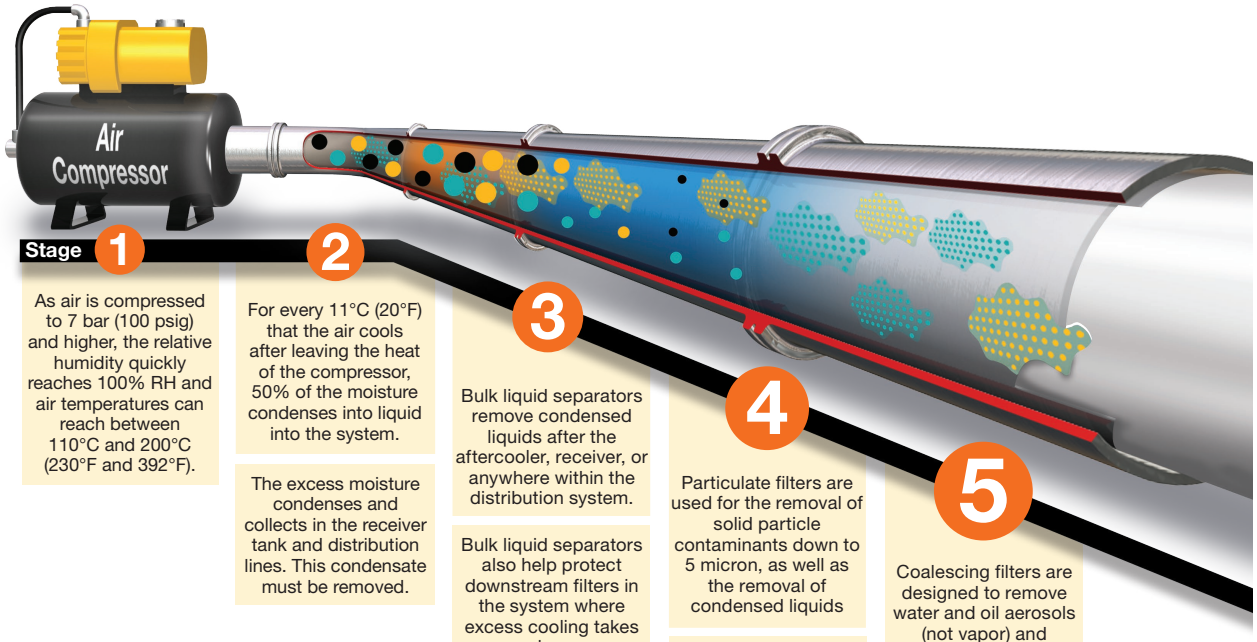
# Together we can power your application with clean, dry air

Fast cycle times, high product quality, and low downtime all require a clean, dry pneumatic system to function properly. Parker has what it takes to make sure pneumatic systems perform at their best.

## Clean, dry pneumatic systems with Parker Global Air Preparation



**Stage 1**

As air is compressed to 7 bar (100 psig) and higher, the relative humidity quickly reaches 100% RH and air temperatures can reach between 110°C and 200°C (230°F and 392°F).

**2**

For every 11°C (20°F) that the air cools after leaving the heat of the compressor, 50% of the moisture condenses into liquid into the system.

The excess moisture condenses and collects in the receiver tank and distribution lines. This condensate must be removed.

**3**

Bulk liquid separators remove condensed liquids after the aftercooler, receiver, or anywhere within the distribution system.

Bulk liquid separators also help protect downstream filters in the system where excess cooling takes place.

**4**

Particulate filters are used for the removal of solid particle contaminants down to 5 micron, as well as the removal of condensed liquids

Note: Water and oil, in vapor form, pass through general purpose particulate filters.

This type of filter should be used as a prefilter for the coalescing (oil removal) filter.

**5**

Coalescing filters are designed to remove water and oil aerosols (not vapor) and particulate from air streams down to 0.01 micron in size.

Installed in pairs, Particulate and Coalescing filters ensure a continuous supply of high quality air.

**Key**

- **Particulate**
- **Oil**
- **Water**
- **Oil Vapor**
- **Water Vapor**

| **Function** | **Air Compressor** | **Bulk Liquid Removal** | **Particulate Filtration** | **Coalescing Filtration** | **Air Dryers** | **Hydrocarbon Removal** |
| **Application** | All pneumatic systems | Basic pneumatic systems | Basic pneumatic systems | Systems requiring highest quality air. | Systems requiring air with reduced moisture content | Systems requiring highest quality air for critical applications |
| **Description** | Air leaving the compressor room at 93°C (200°F) releases 95% of its moisture into the piping system when it cools to 38°C (100°F) | Removes bulk liquid contamination and protects filters where excess cooling takes place in the distribution piping | Removes solid particulates down to 5 micron, and the separation of bulk contaminants. | Removes liquid aerosols and submicron particulates (not vapor) down to 0.01 micron. | Removes water vapor from air stream. Dew point reduced down to 4°C (40°F) (refrigeration) or -40°C (-40°F) (desiccant). | Removal of odors and trace vapors for critical applications. |

**Saving Money and Space by Sizing Your Valves Properly**
This catalog gives you a flow rating (Cv) for each valve in the Parker Hannifin line. You can "plug" *your* requirements into the following simple formula, and determine the Cv needed to do the job. By not oversizing, you'll save space and money, and you'll ensure the valve you select will do the job.

Converting the Job Requirements Into Cv (Capacity Co-efficient).

$$C_V = \frac{\text{Cylinder Area (Sq. In.) (See Table 1)} \times \text{Cylinder Stroke (In.)} \times \text{Compression Factor (Table 2)} \times \text{"A" (Table 2)}}{\text{Stroke Time (sec.)} \times 28.8}$$

Let's work through an example:

We want to extend a 3 1/4" bore cylinder which has a 12" stroke in one second, and we have a supply pressure of 80 PSI to do the work. Here's what we know:

Cylinder Area for a 3-1/4" Bore, from Table 1 .....8.30 sq. in.
Cylinder Stroke..... 12 in.
Stroke Time Required in Seconds.....1 sec.
Compression Factor at 80 PSI, from Table 2..... 6.4
"A" Constant for 80 PSI, from Table 2 ..... .048

Substituting in the formula, we have:

$$C_V = \frac{8.30 \times 12 \times 6.4 \times .048}{1 \times 28.8} = 1.06$$

Any valve, therefore, which has a Cv of *at least* 1.06, will extend our cylinder the specified distance in the required time.

**Choosing the Valve "Series"**
Your next step is to choose a basic valve design to do the job. For a quick guide to valve designs, see Table 3.

Having selected the basic valve design, consult the Capacity Co-efficient (Cv) tables which describe the individual valve capacities.

**Selecting the Valve Model, Options and Accessories**
Having determined Cv, series, port size, flow-path configuration (pre-determined by circuit design), and actuation method, you're ready to choose the *exact* valve model number.

Read the pertinent catalog pages; note the exact model numbers, options and accessories you want. Then phone or write your Parker Hannifin air valve distributor. They will give you prompt, accurate service.

**Note:** Need circuit design help? Contact your local Parker Hannifin distributor. They are backed up by our regional Sales Engineers and offices. Between them, you'll find answers to all of your questions.

## Table 1

**Effective Square-Inch Areas for Standard-Bore-Size Cylinders**

| Bore Size | Cylinder Area (Sq. In.) | Bore Size | Cylinder Area (Sq. In.) |
|---|---|---|---|
| 3/4" | .44 | 4" | 12.57 |
| 1" | .79 | 4-1/2" | 15.90 |
| 1-1/8" | .99 | 5" | 19.64 |
| 1-1/4" | 1.23 | 6" | 28.27 |
| 1-1/2" | 1.77 | 7" | 38.48 |
| 1-3/4" | 2.41 | 8" | 50.27 |
| 2" | 3.14 | 10" | 78.54 |
| 2-1/2" | 4.91 | 12" | 113.10 |
| 3-1/4" | 8.30 | 14" | 153.94 |
| 3-5/8" | 10.32 | | |

## Table 2

**Compression Factors and "A" Constants**

| Inlet Pressure (psig) | Compression Factor | "A" Constants for Various Pressure Drop* | | |
|---|---|---|---|---|
| | | 2 PSI △P | 5 PSI △P | 10 PSI △P |
| 10 | 1.6 | .152 | .103 | |
| 20 | 2.3 | .126 | .084 | .065 |
| 30 | 3.0 | .111 | .073 | .055 |
| 40 | 3.7 | .100 | .065 | .048 |
| 50 | 4.4 | .091 | .059 | .044 |
| 60 | 5.1 | .085 | .055 | .040 |
| 70 | 5.7 | .079 | .051 | .037 |
| 80 | 6.4 | .075 | .048 | .035 |
| 90 | 7.1 | .071 | .046 | .033 |
| 100 | 7.8 | .068 | .044 | .032 |
| 110 | 8.5 | .065 | .042 | .030 |
| 120 | 9.2 | .063 | .040 | .029 |
| 130 | 9.9 | .061 | .039 | .028 |
| 140 | 10.6 | .058 | .037 | .027 |
| 150 | 11.2 | .057 | .036 | .026 |
| 160 | 11.9 | .055 | .035 | .025 |
| 170 | 12.6 | .053 | .034 | .024 |
| 180 | 13.3 | .052 | .033 | .024 |
| 190 | 14.0 | .051 | .032 | .023 |
| 200 | 14.7 | .050 | .032 | .023 |

**Note:** Use "A" constant at 5 PSI △P for most applications. On very critical applications, use "A" at 2 PSI △P. You will find in many cases, a 10 PSI △P is not detrimental, and can save money and mounting space.

* Tabulated values are the solution of $\frac{1}{22.48}\sqrt{\frac{GT}{(P_1 - P_2)\,P_2}}$ where T is for 68°F and G =1 for Air.

## Table 3

**Characteristics of the Major Valve Designs**

| | |
|---|---|
| **A. Poppet**<br>3-Way and 4-Way | 1. High flow capacities<br>2. Minimum lubrication requirements<br>3. Fast response<br>4. Self-cleaning poppet seats<br>5. Pressures of 15 to 150 psig (modifications for vacuum to 250 psig) |
| **B. Spool Valves (WCS)**<br>3-Way and 4-Way | 1. Low friction<br>2. Lower operating pressures<br>3. Fast response<br>4. Less wear<br>5. Long Cycle Life - Under pressure, radial expansion of the seal occurs to maintain sealing contact with the valve bore<br>6. Non-Lube Service - No lubrication required for continuous valve shifting<br>7. Bi-Directional Spool Seals - Common spool used for any pressure, including vacuum |
| **C. Packed Bore**<br>4-Way | 1. Wide range of flow capacities<br>2. Wide range of flow-path configurations<br>3. Pilot-operated models available<br>4. Pressures of vacuum to 150 psig |
| **D. Rotary or Reciprocating Disc**<br>4-Way, manually operated | 1. Inexpensive<br>2. Versatility in manual actuation |

**Cv – Capacity Co-efficients** (sometimes called Flow Factors). Each flow path through the valve has its own Cv value. All Cv ratings for each valve cataloged on this page are listed on the front side of this sheet.

$$C_V = \frac{Q}{22.48}\sqrt{\frac{GT}{(P_1 - P_2)\,P_2}}$$

$C_V = Q \times$ "A" (Table 2)

Q = Flow in Standard Cubic Feet per minute (14.7 PSIA at 60°F)
$P_1$ = Inlet Absolute Pressure (gauge pressure + 14.7)
$P_2$ = Outlet Absolute Pressure (gauge pressure + 14.7)
Note: $P_2$ must be greater than .53 x $P_1$
G = Specific Gravity of flowing medium (Air, G =1)
T = Absolute Temperature of Air (460 + °F.)

**⚠ CAUTION:**

Polycarbonate bowls and sight domes, being transparent and tough, are ideal for use with Filters and Lubricators. They are suitable for use in normal industrial environments, but should not be located in areas where they could be subjected to direct sunlight, an impact blow, nor temperatures outside of the rated range. As with most plastics, some chemicals can cause damage. Polycarbonate bowls and sight domes should not be exposed to chlorinated hydro-carbons, ketones, esters and certain alcohols. They should not be used in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester and di-ester types.

Metal bowls are recommended where ambient and/or media conditions are not compatible with polycarbonate bowls. Metal bowls resist the action of most such solvents, but should not be used where strong acids or bases are present or in salt laden atmospheres. Consult the factory for specific recommendations where these conditions exist.

**TO CLEAN POLYCARBONATE COMPONENTS USE MILD SOAP AND WATER ONLY! DO NOT** use cleansing agents such as acetone, benzene, carbon tetrachloride, gasoline, toluene, etc., which are damaging to this plastic.

**Metal bowl guards are recommended for all applications.**

**⚠ CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT –** The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design.

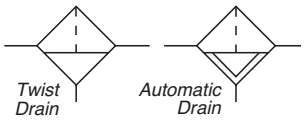
## Filters



Air filters are designed to remove airborne solid contaminants, pipescale, rust, pipe dope, etc., which may plug small orifices or cause excessive wear and premature failure of pneumatic components.

## Filter Selection

1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select filter pipe size by choosing curve that offers minimum pressure drop at desired flow in scfm. For optimum performance, a 2 to 5 psig pressure drop should be selected.

## Particulate Filters:

For the removal of solid particle contaminants down to 5 microns and the separation of bulk liquids.

This type of filter is generally used in industrial applications where liquid water and oil, and harmful dirt particles must be removed from the compressed air system. This type of filter should also be used as a prefilter for the Coalescing (oil removal) filter.

### First Stage Filtration:

Air enters at inlet port and flows through deflector plate **(A)** which causes a swirling action. Liquids and coarse particles are forced to the bowl interior wall **(B)** by the centrifugal action of the swirling air. They then carry down the bowl wall by the force of gravity. Shroud **(C)** assures that the proper swirling action occurs and that the air does not pass directly through the filter element **(D)** until the large particles and liquids are removed. The baffle **(E)** separates the lower portion of the bowl into a "quiet zone" where the removed liquids and particles collect, unaffected by the swirling air, and are therefore not reentrained into the flowing air.

### Second Stage Filtration:

After liquids and large particles are removed in the first stage of filtration, the air flows through element **(D)** where smaller particles are filtered out and retained. The filtered air then passes downstream. Collected liquids and particles in the "quiet zone" should be drained before their level reaches a height where they would be reentrained in the flowing air. This can be accomplished by the twist drain **(F)** which is actuated by twisting knob **(G)** counterclockwise. On the 09 Series, unscrew the drain valve **(F)** slightly until the liquid begins to drain.

Once the required flow is determined for a pneumatic application, the filter can be selected by using the flow chart. To read the filter flow chart, first determine the inlet pressure that will be used. Find the appropriate pressure curve on the graph. Each graph will contain three pressure curves. If the required inlet pressure is not on the graph, interpolate a similar curve for the required pressure. Next, determine the acceptable pressure drop across the filter and locate it on the vertical axis. Find the intersection point of the acceptable pressure drop and the inlet pressure curve. At this point follow a vertical path downward to view the flow in scfm. If the flow is too low, select a larger port size or body size to give the required flow. If the flow is higher than necessary, select a smaller port size or body size to give the required flow.

## Coalescing Filters

Coalescing filters are designed to remove 99.9% + of the liquid aerosols, both water and oil, and submicron particulate matter from your pneumatic system. These filters will provide oil free air for applications such as spray painting, air gauging, pneumatic instrumentation, printing and packaging.

### Media Specifications

| Grade | Coalescing Efficiency 0.3 to 0.6 Micron Particles | Maximum Oil Carryover[1] PPM w/w | Micron Rating | Pressure Drop (PSID)[2] @ Rated Flow | |
|---|---|---|---|---|---|
| | | | | Media Dry | Media Wet With 10-20 wt. oil |
| 6 | 99.97% | 0.008 | 0.01 | 1.0 | 2-3 |
| 10 | 95% | 0.85 | 1.0 | 0.5 | 0.5 |

[1] Tested per BCAS 860900 at 40 ppm inlet.
[2] Add dry + wet for total pressure drop.
D.O.P. = Dioctylphthalate

### Element Selection

| Element grade | Applications |
|---|---|
| **6** (.01 Micron) | General air coalescing applications when total removal of liquid aerosols and suspended fines is required in all pressure ranges. Protection of air dryers, air gauging, air logic, modulating systems, critical air conveying, most breathing air systems, etc. |
| **10** (.7 Micron) | Precoalescer or prefilter for Grade 6 to remove gross amounts of water and oil, or tenacious aerosols which are difficult to remove. Upgrading existing particulate equipment to coalescing without increase in pressure drop. |

## Reading Nomograms for Coalescing Filters

To size a coalescer, refer to the nomograms below. First determine the system pressure and find that pressure on the vertical axis on the left. Next, find the required flow rate on the middle vertical axis. Draw a connecting line between the two points extending to the middle vertical axis giving the recommended coalescer series. If the intersection on the model number axis is between models then choose the model above the intersection point insuring the proper flow in the unit.

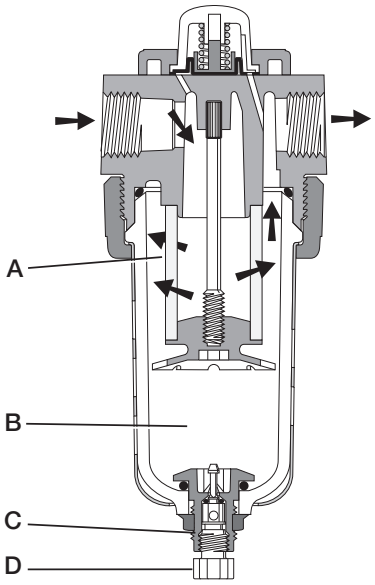
## Coalescing Filters (Oil Removal)

Specifically designed for the removal of solid particles, water and oil aerosols down to 0.01 micron. Maximum remaining oil content of air leaving the filter down to 0.01 ppm at 70°F (21°C) at a pressure of 100 psig (6.9 bar) using a typical compressor lubricant. Two filter element grades are offered to better meet your air quality requirements.

Grade 10 filter elements are used for most air coalescing applications where the removal of liquid aerosols and submicronic particles for general air quality is required. Protection of components such as air valves, cylinders, as well as air conveyors, air gaging, air bearings, air control circuits and paint spraying equipment are examples of specific end-use applications. This grade of filter element should be used as a prefilter for the Grade C coalescing filter.

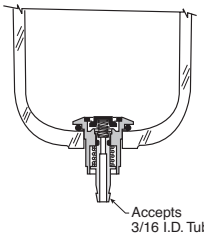
Grade 6 high-efficiency filter elements are used where the removal of extremely fine particulate and virtually “oil-free” or high quality air is necessary. Specific end-use applications are protection of critical air control circuits, air logic systems, flow and temperature controllers, food processing, electronics, health care and film processing.

The contaminated air enters the element interior and is forced through a thick membrane of borosilicate glass fibers coated with epoxy **(A)**. Flow then passes through an outer structural support and, at this stage, has removed up to 99.97% + of the sub-micron particles evident in the contaminated air. These tiny droplets coalesce together and are blotted from the filter surface by the drain and release layers of non-woven glass felt and rayon cloth. The drops now begin a gravitational passage to the filter sump **(B)** where they can be manually or automatically drained. The clean, filtered air now passes through the outer screen plastic net and out into the pneumatic system. The Air Line Coalescing Filter removes liquid aerosols



and sub-micron particulate matter. Collected liquids and particles in the “quiet zone” should be drained before their level reaches a height where they would be reentrained in the flowing air. This can be accomplished by the manual drain **(C)** which is actuated by twisting knob **(D)** counterclockwise. On the 30 Series, unscrew the drain valve **(E)** slightly until the liquid begins to drain.

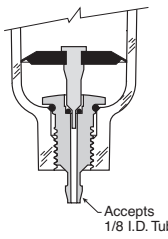
### Semi Automatic Drain



**(Overnight Drain)**

This drain offers a semi-automatic function when there is a differential pressure in the filter which occurs when system pressure is shut off. The drain can also be used manually by gripping it with your fingertips and pushing upward.

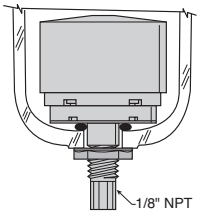
### Automatic Pulse Drain



**(Spitter Drain)**

The diaphragm in this drain pulses when there is a pressure differential such as a valve cycling or cylinder stroking downstream. This action flexes the diaphragm and allows the filter to drain the entrapped water.

### Automatic Float Drain



The float internal to this drain rises with increased liquid level. When the float rises, it opens a seat area allowing the trapped liquids to drain through the bottom.
A manual override can be pushed in the bottom of the drain to unseat the float if particulates create a block.

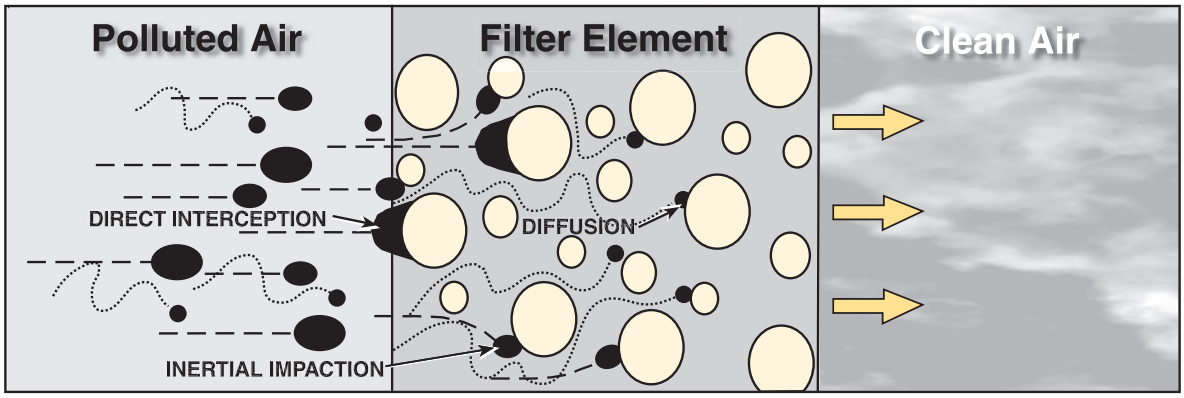
## Filter Technology – Mechanisms of Filtration



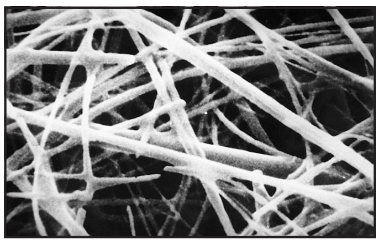
## Coalescing Filters

Essentially, coalescing filters Grade 10 (.7 micron) & 6 (.01 micron), rely on what is known as mechanical filtration for their effectiveness. The main mechanisms of mechanical filtration are direct interception, inertial impaction and diffusion. Electrostatic attraction can have some bearing although the efficiency of coalescing filters is not dependent on this mechanism.

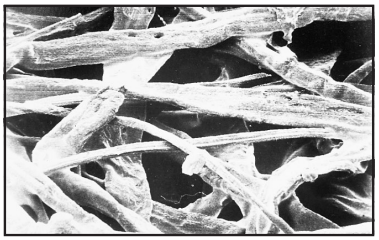
Direct Interception occurs when a particle collides with and adheres to a fiber of the filter material without deviating out of the streamline flow. This mechanism tends to take place on the surface of the filter material and affects mainly larger particles over 1 micron in size.

Inertial Impaction occurs when a particle is unable to follow the tortuous path around the filter fibers and eventually collides with and adheres to one of the fibers. Typically affecting particles in the 0.3 micron -1 micron size range.

Diffusion or Brownian Movement, as it is sometimes called, occurs with extremely small particles which tend to wander within the gas stream, increasing their chances of colliding with and adhering to a fiber. This usually affects particles below 0.3 micron in size. A degree of overlap takes place with the mechanisms, the extent varying on the conditions.

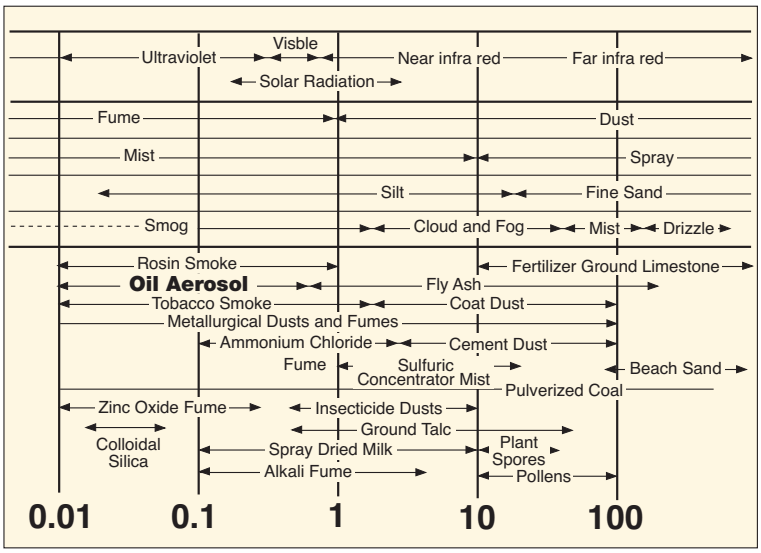


*Above:* Clean borosilicate microfiber seen at a magnification factor of 3900. *Right:* The same filter material in a contaminated state at the same degree of magnification.



*When all mechanisms are combined and utilized by a deep bed of the correct type of filter material, removal of virtually all particles whether liquid or solid, is achieved.*

## Pollution Size Chart



To assist in understanding the parameters of filtration, refer to this pollution size comparison chart. Look at the size of a major contaminant, oil aerosol! It is in the region of 0.01 - 0.8 micron. Tobacco smoke is also a liquid aerosol in a similar size band 0.01 -1.2 micron. Observe the smoke test yourself, appreciate the size of the problem! The smallest particle the human eye can see is in the order of 40 microns.

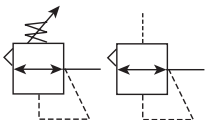
## Regulators

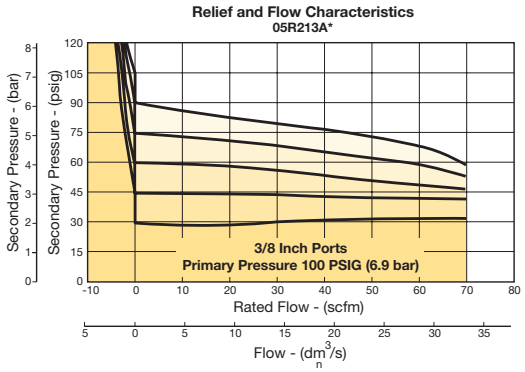


Air regulators are designed to provide quick response and accurate pressure regulation for the most demanding industrial applications.

## Regulator Selection

1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select regulator by choosing the curve that offers minimum pressure drop at desired flow in scfm.

### Reading Flow Charts to Size Regulators



Once the required flow is determined for a pneumatic application the regulator or filter/regulator can be selected by using the flow chart. The chart serves two different purposes. To read the flow, use the right side of the chart. To read the relief characteristics use the left side of the chart. When reading the flow chart, first determine the secondary pressure that will be used. Find the appropriate pressure curve on the graph. Given an acceptable pressure drop for an application, follow the flow curve until it intersects the pressure drop point. This will give the flow at that particular pressure drop.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

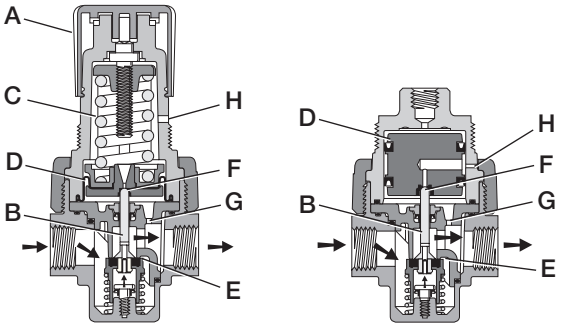
### CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## General Purpose Regulators

Used to provide a convenient and low cost method to reduce a supplied air pressure to a desired outlet pressure and transform a fluctuating air supply to a relatively constant reduced air pressure within the operating range of the regulator.

This type of regulator is generally used in a wide variety of applications where reduced pressure is highly desirable for energy conservation, safety requirements, air circuit control and air instrumentation.



## Operation

With the adjusting knob **(A)** turned fully counterclockwise (no spring load), and pressure supplied to the regulator inlet port, the valve poppet assembly **(B)** is closed. Turning the adjusting knob clockwise applies a load to control spring **(C)**. This load causes the piston /diaphragm **(D)** and the valve poppet assembly **(B)** to move downward allowing flow across the seat area **(E)** created between the poppet assembly and the seat. Pressure in the downstream line is sensed below the piston / diaphragm **(D)** and offsets the load of spring **(C)**. As downstream pressure rises, poppet assembly **(B)** and control piston **(C)** move upward until the area **(E)** is closed and the load of the spring **(C)** and pressure under piston / diaphragm **(D)** are in balance. A reduced outlet pressure has now been obtained, depending on spring load. Creating a demand downstream, such as opening a valve, results in a reduced pressure under the piston / diaphragm **(D)**. The load of control spring **(C)** now causes the poppet assembly to move downward opening seat area **(E)** allowing air to flow to meet the downstream demand. The flow of downstream air is metered by the amount of opening **(E)**.

During low flow requirements, the amount of opening at the seat **(E)** is small, while at high flows it is large. The downstream pressure signal, which regulates the amount of opening, requires an adjustment over this range, in order to attempt a constant output. This adjustment is the orifice **(G)**, which is sized and located in such a manner as to provide a compensation to the downstream pressure signal transmitted to the piston. This effect is called aspiration and its effect is to maintain downstream pressure nearly constant over a wide range of flow demands.

Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the piston / diaphragm **(D)** to move upward against control spring **(C)**, open vent hole **(F)**, and vent the excess pressure to atmosphere through the hole in the bonnet **(H)**. (This occurs in the relieving type regulator only.)

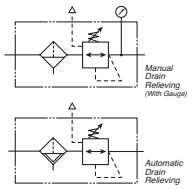
## Filter / Regulators

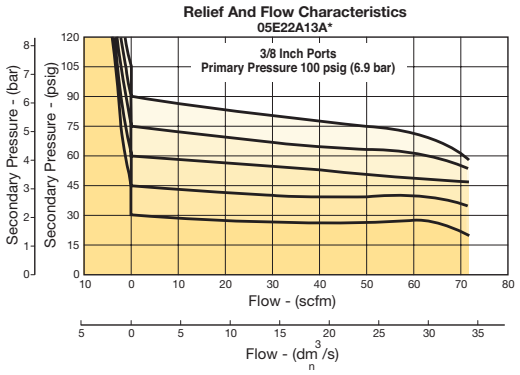


Integral Filter / Regulators are an excellent choice where accurate pressure regulation and high moisture removal efficiency are required in a space saving package.

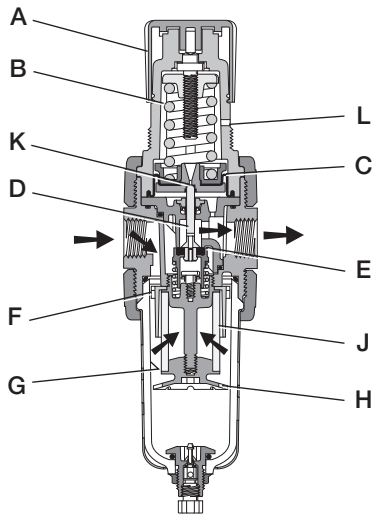
## Filter / Regulator Selection

1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select filter/regulator by choosing the curve that offers minimum pressure drop at desired flow in scfm.

## Reading Flow Charts to Size Filter / Regulators



Once the required flow is determined for a pneumatic application the regulator or filter/regulator can be selected by using the flow chart. The chart serves two different purposes. To read the flow, use the right side of the chart. To read the relief characteristics use the left side of the chart. When reading the flow chart, first determine the secondary pressure that will be used. Find the appropriate pressure curve on the graph. Given an acceptable pressure drop for an application, follow the flow curve until it intersects the pressure drop point. This will give the flow at that particular pressure drop.



## Operation

Turning the knob **(A)** clockwise applies a load to control spring **(B)** which forces the piston/diaphragm **(C)** and valve poppet assembly **(D)** to move downward allowing filtered air to flow through the seat area **(E)** created between the poppet assembly and the seat. "First stage filtration" begins when air pressure supplied to the inlet port is directed through deflector plate **(F)** causing a swirling centrifugal action forcing liquids and coarse particles to the inner bowl wall **(G)** and down below the lower baffle (H) to the quiet zone. After liquids and large particles are removed in the first stage of filtration "second stage filtration" occurs as air flows through element **(J)** where smaller particles are filtered out and retained. The air flow now passes through seat area **(E)** to the outlet port of the unit. Pressure in the downstream line is sensed below the piston/diaphragm **(C)** and offsets the load of control spring **(B)**. When downstream pressure reaches the set-point, poppet valve assembly **(D)** and piston/diaphragm **(C)** move upward closing seat area **(E)**. Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the piston/diaphragm **(C)** to move upward opening vent hole **(K)** venting the excess pressure to atmosphere through the hole in the bonnet **(L)**. (This occurs in the standard relieving type regulator only.)

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

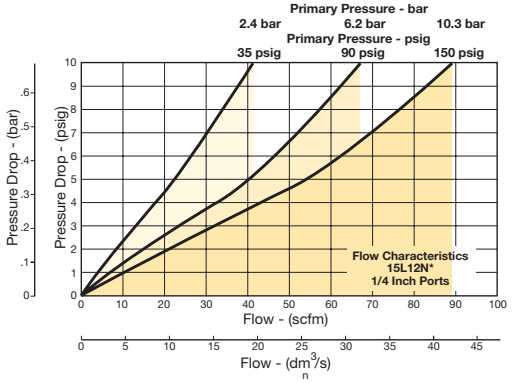
## Micro-Mist Lubricators

Micro-Mist Air Lubricators are designed to provide optimum and uniform lubrication with fine micro-mist particles of 2 micron or smaller, to pneumatic components even through complex piping arrangements.

## Lubricator Selection

1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select lubricator by choosing the curve that offers minimum pressure drop at desired flow in scfm.

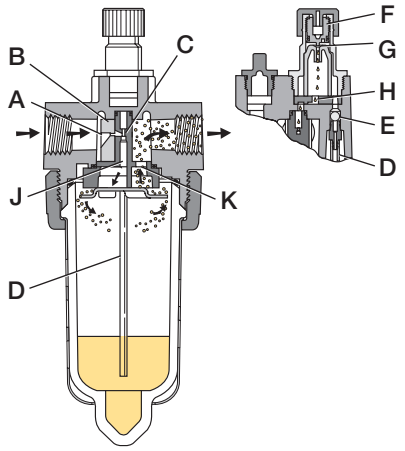
## Reading Flow Charts to Size Micro-Mist Lubricators



Once the required flow is determined for a pneumatic application the lubricator can be selected by using the flow chart. To read the lubricator flow chart, first determine the inlet pressure that will be used. Find the appropriate pressure curve on the graph. Each graph will contain three pressure curves. If the required inlet pressure is not on the graph, interpolate a similar curve for the required pressure. Next, determine the acceptable pressure drop across the lubricator and locate it on the vertical axis. Find the intersection point of the acceptable pressure drop and the inlet pressure curve. At this point follow a vertical path downward to view the flow in scfm.

If the flow is too low, select a larger port size or body size to give the required flow. If the flow is higher than necessary, select a smaller port size or body size to give the required flow.

The Micro-Mist lubricators inject a micro-mist of oil into the flowing air stream to automatically provide the correct amount of internal lubrication for air tools and other pneumatic devices. This type of lubricator can be precisely adjusted to a very low oil flow rate because only a portion of the oil drops seen in the sight dome goes downstream. The lubricator should be used where only a very minute amount of lubricant is desirable or where it is necessary for the oil to remain in suspension in the air stream for long distances.



## Operation

Air flowing through the unit goes through two paths. At low air flow rates, the majority of the air flows through venturi section **(A)**. The rest of the air slightly deflects and flows by the flapper **(B)**. The velocity of the air flowing through venturi section **(A)** creates a pressure drop at throat section **(C)**. This lower pressure allows oil to be forced from the reservoir through the pickup tube **(D)** past the check ball **(E)**, to the dome assembly where the rate of oil flow is controlled by metering screw **(F)**. Rotation of the metering screw **(F)** in the counterclockwise direction increases the oil flow rate; in the clockwise direction decreases the oil flow rate.

Oil then flows through the clearance between the inner and outer sight domes **(G)** where drops are formed and drip into the nozzle tube **(H)**. Here it is then broken into fine particles as it expands into the low pressure venturi. From there, the atomized oil flows through the precision orifice **(J)**. This action causes the larger particles of oil to fall back into the reservoir where it can recirculate through the system. The remaining mist of fine particles (5 micron or smaller – about 3% of which passed through the sight dome) is then carried through opening **(K)** where it joins and mixes with air that bypassed the flapper **(B)**. As air flow rate increases, the flapper **(B)** deflects, allowing most of the inlet air to bypass the venturi section **(A)**.

However, a proportion of the inlet air passes through the venturi, assuring that oil delivery increases linearly with increased air flow rate. This proportioning method is advantageous at low inlet flows because the venturi design remains efficient.

The check ball **(E)** prevents reverse oil flow down the pickup tube when air flow stops. Thus, oil delivery can resume immediately when air flow restarts. **Micro-Mist Lubricators can only be filled when the air supply is shut off.**

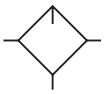
## Mist Lubricators

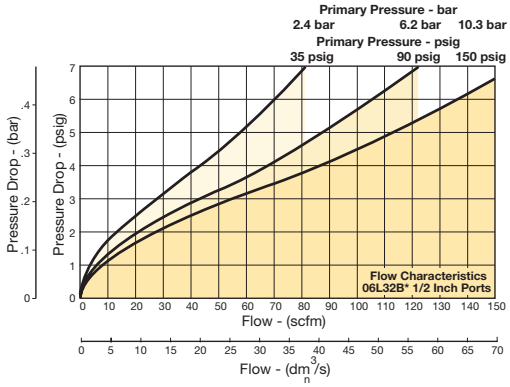


Mist Air Lubricators are designed to provide lubrication for most general applications in a pneumatic system. Units should be installed close to the application ensuring effective distribution of oil to pneumatic components.

## Lubricator Selection

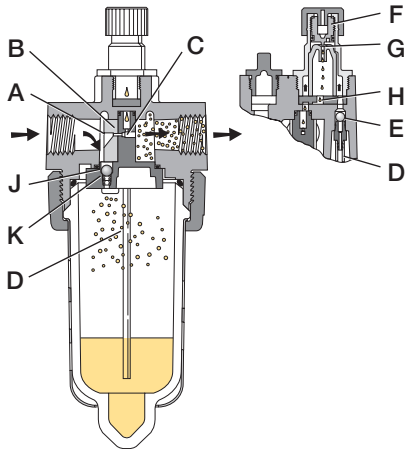
1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select lubricator by choosing the curve that offers minimum pressure drop at desired flow in scfm.

## Reading Flow Charts to Size Mist Lubricators



Once the required flow is determined for a pneumatic application the lubricator can be selected by using the flow chart. To read the lubricator flow chart, first determine the inlet pressure that will be used. Find the appropriate pressure curve on the graph. Each graph will contain three pressure curves. If the required inlet pressure is not on the graph, interpolate a similar curve for the required pressure. Next, determine the acceptable pressure drop across the lubricator and locate it on the vertical axis. Find the intersection point of the acceptable pressure drop and the inlet pressure curve. At this point follow a vertical path downward to view the flow in scfm.
If the flow is too low, select a larger port size or body size to give the required flow. If the flow is higher than necessary, select a smaller port size or body size to give the required flow.

These lubricators inject an oil aerosol into the flowing air stream to automatically provide the proper amount of internal lubrication to air operated tools or other pneumatic devices.



## Operation

Air flowing through the unit goes through two paths. At low air flow rates, the majority of the air flows through venturi section **(A)**. The rest of the air slightly deflects and flows by the flapper **(B)**, restrictor disc **(M)** on the 09L. The velocity of the air flowing through venturi section **(A)** creates a pressure drop at throat section **(C)**. This lower pressure allows oil to be forced from the reservoir through the pickup tube **(D)** past the check ball **(E)**, to the dome assembly where the rate of oil flow is controlled by metering screw **(F)**. Rotation of the metering screw **(F)** in the counterclockwise direction increases the oil flow rate; in the clockwise direction decreases the oil flow rate. Oil then flows through the clearance between inner and outer sight domes **(G)** where drops are formed and drip into the nozzle tube **(H)**. On the 09L, oil flows through the drip tube **(F)** where drops are formed and drip into the throat section **(C)**. Here it is then broken into fine particles and mixed with the swirling air to be carried to the venturi outlet where it joins the air by passing the flapper **(B)**, **(M)**. As air flow rate increases, the flapper **(B)**, **(M)** deflects, allowing a greater part of the additional air to bypass the venturi section **(A)**. This assures the oil delivery rate increases linearly with increased air flow rate. The check ball **(E)** assures that when there is no oil flow the oil in the pickup tube does not return to the reservoir.

The bowl can be filled under pressure due to the action of the check ball **(J)**. When the fill cap is removed, air in the bowl escapes and pressure forces the check ball **(J)** to nearly seal at **(K)**. When the fill cap is replaced, the small amount of air flow past check ball **(J)** builds up pressure and together with the spring forces the check ball **(J)** off seat **(K)**, letting full line pressure into the bowl.

## F442 Oil

| Quantity | Part numbers |
|---|---|
| 1 Quart | F442001 |
| 1 Gallon | F442002 |
| 12 Quart Case | F442003 |
| 4 Gallon Case | F442005 |

Petroleum based oil of 100 to 200 SSU viscosity at 100°F and an aniline point greater than 200°F

(DO NOT USE OILS WITH ADDITIVES, COMPOUNDED OILS CONTAINING SOLVENTS, GRAPHITE, DETERGENTS, OR SYNTHETIC OILS.)

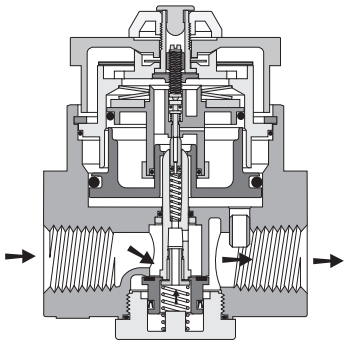
## Dial Regulator

The Dial Regulator is a constant bleed, piston operated regulator. The pilot controlled pressure reducing valve provides exceptionally high air flow with steady pressure control and minimal secondary pressure drop. The non-rising adjustment knob provides quick selection of the desired secondary pressure in less than one full turn. The adjustment knob also can serve as the pressure indicator thereby eliminating the need for a pressure gauge.

This regulator is specifically designed for applications requiring more accurate air circuit control, high air flow capacity with flat performance curves and quick regulator adjustment. The regulator can be used as a conventional regulator for standard air circuits or as a pilot regulator to provide pressure to the control chamber of a pilot operated (slave) regulator.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

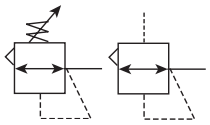


## Operation

To set the regulator, turn the large dial adjustment knob to the desired secondary set pressure. This opens the pilot valve seat allowing air flow into the control chamber which forces the lower piston downward against the relief seat and opens the main valve. At the same time, the air in the control chamber forces the upper piston upward against Belleville springs which closes the pilot valve seat when the set pressure is attained. Secondary pressure in the chamber is now balanced against the control pressure through the lower piston. If demand flow increases, the constant control pressure will force the lower piston and the main valve further downward, and allow more flow downstream. A higher than desired secondary pressure will force the lower piston upward, closing the main valve seat and opening the main relief valve seat thereby allowing air to relieve to the atmosphere. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

## Precision Regulators

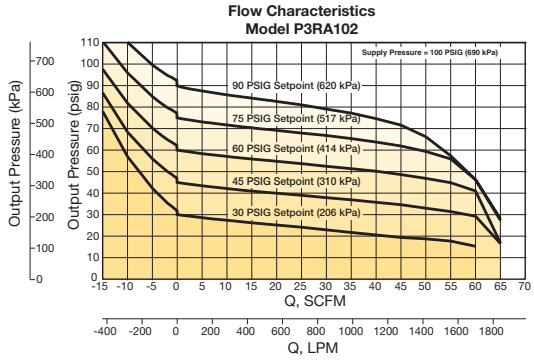


Air regulators are designed to provide quick response and accurate pressure regulation for the most demanding industrial applications.

## Regulator Selection

1. Determine maximum system flow requirements.
2. Determine maximum allowable pressure drop at rated flow in scfm.
3. Refer to flow chart and select regulator by choosing the curve that offers minimum pressure drop at desired flow in scfm.

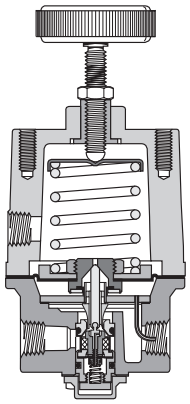
### Reading Flow Charts to Size Regulators



Once the required flow is determined for a pneumatic application the regulator or filter/regulator can be selected by using the flow chart. The chart serves two different purposes. To read the flow, use the right side of the chart. To read the relief characteristics use the left side of the chart. When reading the flow chart, first determine the secondary pressure that will be used. Find the appropriate pressure curve on the graph. Given an acceptable pressure drop for an application, follow the flow curve until it intersects the pressure drop point. This will give the flow at that particular pressure drop.

## Precision Regulator

For use in applications that require reliable performance and accurate pressure control. This type of regulator is generally used for material handling systems, flow and temperature controllers, critical air control circuits, medical and scientific test equipment, and valve positioners.



## Operation

Set the desired secondary pressure by turning the adjustment knob clockwise. This action increases the regulating spring force against the top of the diaphragm disc. When the spring force above exceeds the air pressure beneath the diaphragm, it is transmitted by the valve stem and opens the valve. Airflow through the regulator now occurs.

A precisely designed and positioned aspirator tube constantly transmits the secondary pressure to the under side of the diaphragm so that during flow conditions any pressure loss can be quickly compensated for. When flow is no longer required, the outlet pressure increases slightly, allowing the diaphragm to rise, the valve to close, and set pressure to be maintained.

On self-relieving models, if outlet pressure should increase above the set pressure, the diaphragm will rise therefore opening the relief seal between the diaphragm and the valve. The excess outlet pressure is then vented through the diaphragm orifice into the bonnet and subsequently to the atmosphere through an orifice in the bonnet. For best performance, regulated pressure should always be set by increasing the pressure to the desired setting.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

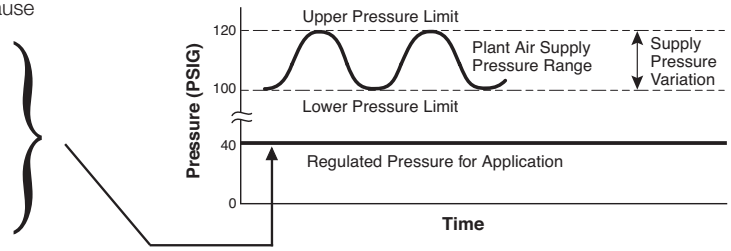
## Precision Regulators Application Guide

Pneumatic pressure regulators are designed to provide a constant pressure output from a fluctuating supply pressure – much the way an electronic voltage regulator works. Pressure regulators provide varying degrees of accuracy with regard to their reduced pressure output. General Purpose pressure regulators work for most fluid power applications. However, for more pressure-critical applications precision regulators can provide the customer with the control they need.

A partial listing of things that can potentially cause regulator output pressure variation are:

- Temperature changes
- Inlet pressure changes
- Variations in flow
- Excess downstream pressure
- Cycling
- Time
- Leakage



### Who needs precision regulators?

**Design level applications:**

When designing a pneumatic system it is important to determine not only the air flow that the application will require but also the acceptable level of pressure variation. Some pneumatic applications cannot tolerate fluctuations in pressure. These applications can include static situations with only a steady pressure maintained, or dynamic flow situations involving any number of changing variables in play while trying to maintain a constant pressure.

**Problem solving device for existing applications:**

Sometimes an existing pneumatic application does not meet the customer's needs with regards to pressure control and/or stability. Any or all of the variables listed above can cause issues with pressure stability.
As applications are expanded, added on to, or modified the pressure and flow requirements can change.

### How do precision regulators differ from general purpose pneumatic regulators?

| Examples ➔ | **High Precision Regulators** P3RA302, P3RA102, P3RA102BP, P3RA171 | **Semi-Precision Regulators** 27R, Dial Regulators, R216 | **General Purpose Regulators** 05R, 06R, 07R, P3NR, R119 |
|---|---|---|---|
| Sensitivity: Reduced pressure repeatability/variation under no-flow condition | .005 to .010 psig (1/8" to 1/4" of water column) | 1 to 2 psig | 3 to 4 psig |
| Regulator's ability to control back pressure accurately: *key for cylinder applications | Begins to relieve at .005 to .010 psig overpressure | Begins to relieve at .5 to 2 psig overpressure | Begins to relieve at 5 to 10 psig overpressure |
| Regulator's ability to maintain set pressure under varying flow, input pressure, temperature conditions: | High | Medium | Standard |
| Constant Bleed - does the regulator constantly bleed a small volume of air to the atmosphere to maintain stability? | Yes | Yes | No |

**1" Water Column = .0360 PSI**

**1 psi = 27.7612 Inches Water Column**

## Parker is protecting your most valuable assets…

**OSHA®** www.osha.gov
Standard 190.147

- This applies to the servicing and maintenance of a machine or equipment.
- Any new, replacement, repair, or renovation to a machine must include an energy isolation device that can accept a lock out device.
- Lock out devices should not be used for any other purposes
- Verification of energy isolation is required

**ANSI**
Standard Z244

- This applies to all machines
- Lockout / tagout is the primary method of hazardous energy control
- Machines shall be designed, manufactured, supplied, and installed with energy isolating devices

**ANSI** B11.0
B11.TR6

**PMMI** B155.1

- B11.0 applies to a broad range of machines, B11.TR6 is specific to machine tools, and B155.1 is specific to packaging and converting machines
- Energy isolating device shall:
  - Be capable of being locked in the OFF position only
  - Be easy to operate
  - Have an exhaust port equal or greater than its supply port
  - Have a pressure indicator that is visible to an operator to verify line is relieved of pressure

## …By offering the best in pneumatic safety for machine maintenance:

### Traditional Ball Valve

| | |
|---|---|
| Not a dedicated energy isolation device | ✖ |
| Not a full exhaust port | ✖ |
| No verification of line exhaust | ✖ |
| Can be locked ON | ✖ |
| Not easily identifiable | ✖ |

### Parker Solution

| | |
|---|---|
| ✔ | Dedicated energy isolation device |
| ✔ | Full exhaust port |
| ✔ | Verification of line exhaust |
| ✔ | Only lockable in OFF position |
| ✔ | Easily identifiable |

## Compressed air and its purification from generation to application

Compressed air is an essential power source that is widely used throughout industry. This safe, powerful and reliable utility can be the most important part of your production process. However, your compressed air will contain water, dirt, wear particles and even degraded lubricating oil which all mix together to form an unwanted condensate. This condensate often acidic, rapidly wears tools and pneumatic machinery, blocks valves and orifices causing high maintenance and costly air leaks. It also corrodes piping systems and can bring your production process to an extremely expensive standstill!

The quality of air required throughout a typical compressed air system can vary.

It is highly recommended that the compressed air is treated prior to entry into the distribution system as well as at each usage point or application.

This approach to system design provides the most cost effective solution to system purification as it not only removes the contamination already in the distribution system, it ensures that only the most critical areas receive air treated to the highest level.

In many instances the compressed air system will be supplying air to more than one application and although the purification equipment specified in the compressor room would remain unchanged, the point of use protection will vary depending upon the air quality requirements of each application.

In many cases this action alone is not enough, as modern production systems and processes demand an even higher level of air quality. Where required, “point of use” filtration, refrigeration or desiccant air dryers can provide the correct air quality, without the need for drying the complete compressed air installation, which can be both costly and totally unnecessary.

## Sources of contamination found in a compressed air system

Contaminants in a compressed air system can generally be attributed to the following:

The quality of air being drawn into the compressor
Air compressors draw in a large volume of air from the surrounding atmosphere containing large numbers of airborne contaminants.

The type and operation of the air compressor
The air compressor itself can also add contamination, from wear particles to coolants and lubricants.

Compressed air storage devices and distribution systems
The air receiver and system piping are designed to store and distribute the compressed air. As a consequence, they will also store the large amounts of contaminants drawn into the system. Additionally, piping and air receivers will also cool the moist compressed air forming condensate which causes damage and corrosion.

### Atmospheric dirt

Atmospheric air in an industrial environment typically contains 183 million per $yd^3$ (140 million per $m^3$) of dirt particles. 80% of these particles are less than 2 microns in size and are too small to be captured by the compressor intake filter, therefore passing directly into the compressed air system.

### Water vapor, condensed water and water aerosols

Atmospheric air contains water vapor (water in a gaseous form). The ability of compressed air to hold water vapor is dependent upon it's temperature. The higher the temperature, the more water vapor that can be held by the air. During compression, the air temperature is increased significantly, which allows it to easily retain the incoming moisture. After the compression stage, air is normally cooled to a usable temperature. This reduces the airs ability to retain water vapor, resulting in a proportion of the water vapor being condensed into liquid water which is removed by a condensate drain fitted to the compressor after-cooler. The air leaving the after-cooler is now 100% saturated with water vapor and any further cooling of the air will result in more water vapor condensing into liquid water. Condensation occurs at various stages throughout the system as the air is cooled further by the air receiver, piping and the expansion of valves, cylinders, tools and machinery. The condensed water and water aerosols cause corrosion to the storage and distribution system, damage production equipment and the end product. It also reduces production efficiency and increases maintenance costs. Water in any form must be removed to enable the system to run correctly and efficiently.

### Rust and pipescale

Rust and pipescale can be found in air receivers and the piping of “wet systems” (systems without adequate purification equipment) or systems which were operated “wet” prior to purification being installed. Over time, this contamination breaks away to cause damage or blockage in production which can also contaminate final product and processes.

### Micro-organisms

Bacteria and viruses will also be drawn into the compressed air system through the compressor intake and warm, moist air provides an ideal environment for the growth of micro-organisms. If only a few micro-organisms were to enter a clean environment, a sterile process or production system, enormous damage could be caused that not only diminishes product quality, but may even render a product entirely unfit for use and subject to recall.

### Liquid oil and oil aerosols

Most air compressors use oil in the compression stage for sealing, lubrication and cooling. During operation, lubricating oil is carried over into the compressed air system as liquid oil and aerosols. This oil mixes with water vapor in the air and is often very acidic, causing damage to the compressed air storage and distribution system, production equipment and final product.

### Oil vapor

In addition to dirt and water vapor, atmospheric air also contains oil in the form of unburned hydrocarbons. The unburned hydrocarbons drawn into the compressor intake as well as vaporized oil from the compression stage of a lubricated compressor will carry over into a compressed air system where it can cool and condense, causing the same contamination issues as liquid oil.

## Compressed air quality standards – ISO 8573

ISO 8573 is the group of International standards relating to the quality of compressed air and consists of nine separate parts. Part 1 specifies the quality requirements of the compressed air and parts 2 - 9 specify the methods of testing for a range of contaminants.

ISO 8573.1 : 2010 is the primary document used from the ISO 8573 series and it is this document which allows the user to specify the air quality or purity required at key points in a compressed air system.

ISO8573-1 lists the main contaminants as Solid Particulate, Water and oil. The purity levels for each contaminant are shown in separate tables, however for ease of use, this document combines all three contaminants into one easy to use table.

| ISO8573-1:2010 Class | Solid Particulate | | | | Water | | Oil |
|---|---|---|---|---|---|---|---|
| | Maximum number of particles per $m^3$ | | | Concentration | Vapor | Liquid | Total oil (aerosol, liquid and vapor) |
| | 0.1 - 0.5 micron | 0.5 - 1 micron | 1 - 5 micron | $mg/m^3$ | Pressure Dewpoint | $g/m^3$ | ppm ($mg/m^3$) |
| 0 | As specified by the equipment user or supplier and more stringent than Class 1 | | | | | | |
| 1 | ≤ 20,000 | ≤ 400 | ≤ 10 | — | ≤ -94°F (-70°C) | — | 0.008 (0.01) |
| 2 | ≤ 400,000 | ≤ 6,000 | ≤ 100 | — | ≤ -40°F (-40°C) | — | 0.08 (0.1) |
| 3 | — | ≤ 90,000 | ≤ 1,000 | — | ≤ -4°F (-20°C) | — | 0.83 (1) |
| 4 | — | — | ≤ 10,000 | — | ≤ 37°F (3°C) | — | 4.2 (5) |
| 5 | — | — | ≤ 100,000 | — | ≤ 45°F (7°C) | — | — |
| 6 | — | — | — | ≤ 5 | ≤ 50F (10°C) | — | — |
| 7 | — | — | — | 5 - 10 | — | ≤ 0.5 | — |
| 8 | — | — | — | — | — | 0.5 - 5 | — |
| 9 | — | — | — | — | — | 5 - 10 | — |
| X | — | — | — | ≤ 10 | — | ≤ 10 | ≤ 10 |

## Specifying air purity in accordance with ISO 8573-1:2010

When specifying the purity of air required, the standard must always be referenced, followed by the purity class selected for each contaminant (a different purity class can be selected for each contaminant if required). An example of how to write an air quality specification is shown below:

### Example:

**ISO 8573-1:2010 Class 1.2.1**

ISO8573-1:2010 refers to the standard document and its revision, the three digits refer to the purity classifications selected for solid particulate, water and total oil. Selecting an air purity class of 1.2.1 would specify the following air quality when operating at the standard's reference conditions:

**Class 1, Particulate**
In each cubic meter of compressed air, the particulate count should not exceed 20,000 particles in the 0.1 - 0.5 micron size range, 400 particles in the 0.5 - 1 micron size range and 10 particles in the 1 - 5 micron size range.

**Class 2, Water**
A pressure dewpoint (PDP) of -40°F (-40°C) or better is required and no liquid water is allowed.

**Class 1, Oil**
In each cubic meter of compressed air, not more than 0.01mg of oil is allowed. This is a total level for liquid oil, oil aerosol and oil vapor.

## Cost effective system design

To achieve the stringent air quality levels required for today's modern production facilities, a careful approach to system design, commissioning and operation must be employed.

Treatment at one point alone is not enough and it is highly recommended that the compressed air is treated in the compressor room to a level that will provide general purpose air to the site and also protect the distribution piping.

Point of use purification should also be employed,not only to remove any contamination remaining in the distribution system, but also with specific attention on the quality of air required by each application. This approach to system design ensures that air is not "over treated" and provides the most cost effective solution to high quality compressed air.

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

## Up to 99% of the total liquid contamination found in a compressed air system is water.

Oil is perceived to cause the most problems as it is seen emanating from open drain points and exhausting valves, however, in the majority of instances, it is actually oily condensate (oil mixed with water) that is being observed.

## How much water can be found in a typical compressed air system?

The amount of water in a compressed air system is staggering. A small 100 scfm (2.8$m^3$/min) compressor and refrigeration dryer combination, operating for 4,000 hours in typical climatic conditions can produce approximately 2,200 gallons (8,328 liters) of liquid condensate per year.

If the compressor is oil lubricated with a typical 2ppm (2 mg/$m^3$) oil carryover, then although the resulting condensate would visually resemble oil, oil would in fact account for less than 0.1% of the overall volume and it is this resemblance to oil to which a false association is made.

The example above assumes uses a small compressor to highlight the large volume of condensate produced. If a compressed air system was operated in warmer, more humid climates, or with larger compressors installed, running for longer periods, the volume of condensate would increase significantly.

## Contamination and types of compressors

It is often believed that the level of compressed air purification equipment required in a system is dependent upon the type of compressor used. Contamination in a compressed air system originates from many sources and is not related solely to the compressor or it's lubricants. No matter what compressor type is selected, adequate filtration and separation products will be required to remove the large volume of dirty contaminated water as well as the dirt, rust, pipescale and microbiological contamination in the system.

## Preventative maintenance provides you with the following benefits:

- Lowest operating costs
- Superior compressed air quality
- Continued protection of downstream equipment and processes
- Peace of mind

## Compressed air and it's purification

Having identified the different types of contamination that can be found within a compressed air system, we can now examine the purification technologies available for it's removal.

## Particle and coalescing filters

Coalescing filters are probably the most important items of purification equipment in any compressed air system. They are designed to remove oil and water aerosols using mechanical filtration techniques and have the additional benefit of removing solid particulate to very low levels (as small as 0.01 micron in size). Installed in pairs, most users believe one to be an oil removal filter and the other to be a particulate filter, when in fact, the pair of filters both perform the same function. The first filter, a general purpose filter is used to protect the high efficiency filter against bulk contamination. This "dual filter" installation ensures a continuous supply of high quality compressed air with low operational costs and minimal maintenance time.

## Bulk liquid removal high efficiency water separators

Used to protect filters in systems where excessive cooling takes place in distribution piping. Water Separators will remove in excess of 98% of bulk liquid contamination through centrifugal separation techniques.

## Refrigeration dryers

Refrigeration dryers work by cooling the air, so are limited to positive pressure dewpoint ratings to prevent freezing of the condensed liquid. Ideal for general purpose applications, they typically provide pressure dewpoints of 38°F (3°C), 45°F (7°C) or 50°F (10°C) pdp. Air is reheated before it re-enters the system to prevent piping from “sweating” in humid conditions. Refrigeration dryers are not suitable for installations where piping is installed in ambient temperatures below the dryer dewpoint i.e. systems with external piping.

## Adsorption (desiccant) dryers

Water vapor is water in a gaseous form and is removed from compressed air using a dryer, with dryer performance being measured as pressure dewpoint. Adsorption or desiccant dryers remove moisture by passing air over a regenerative adsorbent material which strips the moisture from the air. This type of dryer is extremely efficient and typical pressure dewpoint ratings are -40°F (-40°C) or -100°F (-70°C) pdp. This means that for water vapor to condense into a liquid, the air temperature would have to drop below -40°F (-40°C) to -100°F (-70°C) respectively (the actual air temperature after an adsorption dryer is not the same as it's dewpoint).

Beneficially, a pressure dewpoint of -15°F (-26°C) or better will not only prevent corrosion, but will also inhibit the growth of microorganisms within the compressed air system.

## Important note regarding compressed air dryers

As adsorption and refrigeration dryers are designed to remove only water vapor and not water in a liquid form, they require the use of particulate and coalescing filters, and possibly a bulk liquid separator to work efficiently.

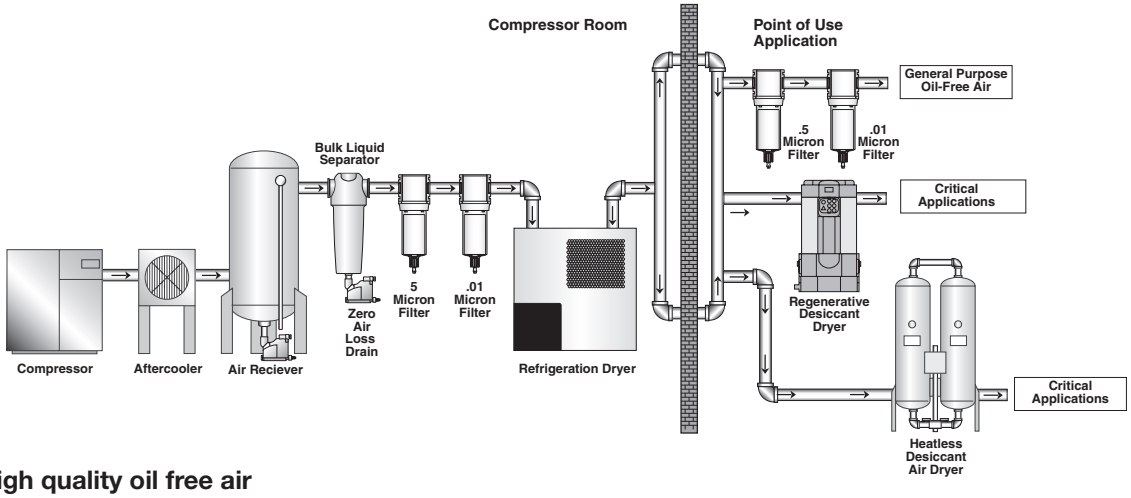
Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

## General purpose oil free air

Bulk contamination is removed to an adequate level prior to the air entering the distribution system.
Point of use particulate filter(s) are used for removal of contamination within the distribution system.
Point of use adsorption dryer installed where lower dewpoints are required.

### Typical applications

- Plant automation
- Air logistics
- Pneumatic tools
- General instrumentation
- Air conveying
- Air motors
- Temperature control systems
- Blow guns
- Gauging equipment
- Raw material mixing
- Sand / bead blasting



## High quality oil free air

Bulk contamination is removed to an adequate level prior to the air entering the distribution system.
Point of use particulate filter(s) are used for removal of contamination within the distribution system.
Adsorption dryers are used for critical applications where lower dewpoints are required.

### Typical applications

- Blow molding of plastics e.g. P.E.T. bottles
- Film processing
- Critical instrumentation
- Advanced pneumatics
- Air blast circuit breakers
- Decompression chambers
- Cosmetic production
- Medical air
- Dental air
- Lasers and optics
- Robotics
- Spray painting
- Air bearings
- Pipeline purging
- Measuring equipment

RoHS COMPLIANT

## DECLARATION OF COMPLIANCE (ROHS)

European Directive 2011/65/EU – RoHS (Restriction us of certain Hazardous Substances in electrical and electronic equipment), restricts the use of the 6 substances in the manufacture of specified electrical equipment.

**Lead:** Product containing lead and its compound (except for applications of lead as an alloying element by weight in steel up to 0.35%, in aluminium up to 0.4% and in copper alloys up to 4% and in circuit board solder) must not exceed 0.1% by weight

**Mercury:** The concentration level must not exceed 0.1% by volume

**Cadmium:** The concentration level must not exceed 0.01% by volume

**Hexavalent Chromiou:**
This is a corrosive protective finish used on our product line. Where this finish is utilized the Chromate solution is Hexavalent (Chrome 6) free.

**Polybrominated Biphenyls (PBB):**
The concentration level must not exceed 0.1% by weight. This substance is not know to be in any of our products.

**Polybrominated Diphenyl Esters (PBDE):**
The concentration level must not exceed 0.1% by weight. This substance is not know to be in any of our products.

CE

Global Air Preparation products supplied by Parker Hannifin have been designed and manufactured in accordance with "sound engineering practice", as defined by Article 3 of Pressure Equipment Directive 97/23/EC.

REACh Compliant

Global Air Preparation product range is in compliance with REACH to ensure continued compliance additions to the list of SVHC (Substance of Very High Concern) are reviewed periodically.

Global Air Preparation product range has been third party Shock & Vibration tested independently in accordance to EN 61373 : 1999, Category 2

Ex ATEX

Following Ignition Hazard Assessments performed on the non-electrical Global Air Preparation products they are in accordance with the requirements of EN 13463-1:2009, it was considered that the equipment does not contain its own source of ignition, and therefore is not within the scope of directive 94/9/EC.

The products can be used in a Group II Category 2 environment assuming that the ATEX Directive and the following conditions are complied with:

- Installation and maintenance of the product must be undertaken by qualified personnel.
- Do not mount the products in an area where impact may occur.
- Filters must be used to limit the introduction of particles and to capture particles generated in service.
- Supply air quality must be within ISO 8573-1:2010 Class 1.4.2.
- Maximum working temperature to be as stated on product label.
- WARNING – pulsating pressure and/or a closed circuit can generate heat.
- Deposits of dust on the product must not exceed 5mm thickness.
  Refer to technical file for surface areas of plastics. The unit must be earthed via the compressed air supply line.
- The unit must not come into contact with liquid solvents, acids or alkalis
  Refer to technical file for chemicals known to be incompatible. Product cleaning must be undertaken using a method complying with the specifications of the ATEX zone, preferably by using mild soap and water or antistatic products.
- Regulators, Filter Regulators:
  Do not use Regulators or Filter Regulators within systems that can create vibration within the Regulator / Filter Regulator unit.
- Solenoid Operated Valves:
  Are suitable for use in an ATEX environment, (Group II Category 2) providing ATEX approved solenoids are fitted.
- Technical file available on request.

ISO

Global Air Preparation product range has been designed and tested in accordance with ISO flow testing, envelope integrity, and catalog data presented.

- Filters – ISO 5782-1 & ISO 5782-2: 1997
- Regulators- ISO 6953-1 & ISO 6953-2: 2000
- Lubricators- ISO 6301-1 & ISO 6301-2: 2009

# Parker Global Air Preparation System

## Global.
## Modular.

*Performance you need,*
***wherever*** *you need it.*

Full featured particulate and coalescing filters, regulators, filter/regulators, and lubricators are available with a wide range of standard options to meet air preparation needs.

The comprehensive Global Air Preparation System is available in three body sizes with either BSPP, BSPT, or NPT to accommodate thread type requirements.

Individual units can easily be assembled into various combinations, utilizing patented modular lightweight body connectors.

# Comprehensive Offering

**P31 Mini Series**
1/4" ports
40mm body width

**P32 Compact Series**
1/4", 3/8" and 1/2"
60mm body width

**P33 Standard Series**
1/2" and 3/4"
73mm body width

## Filters

- 5µ particulate, 1.0µ and 0.01µ coalescing, and adsorber available as standard
- Transparent or metal bowl with manual or auto float drains standard

## Regulators

- Available as stand alone, common port and electronic proportional
- Both relieving and non-relieving versions available

## Filter / Regulators

- Compact design for space savings
- Available with all the same standard options as the filters and regulators

## Lubricators

- Proportional oil delivery over a wide range of air flows
- Fill under pressure

## Combinations

- Compact design for space savings
- Easily assembled
- Many configurations available

## Accessories

- Solenoid operated soft start, quick dump, and soft start/ quick dump valves
- Manifold blocks
- Ball style lockout / shutoff valve
- Repair kits, gauges, etc.

# Air Preparation

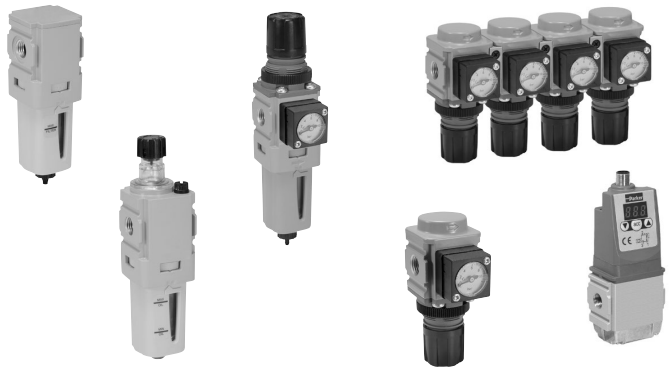
## P31 Mini Series

40mm body width

1/4" Ported

| Flows up to: | scfm | ($dm^3/s$, ANR) |
|---|---|---|
| Filter | 25 | (12) |
| Coalescer | 7.5 | (3.6) |
| Regulator | 68 | (32) |
| Filter/Regulator | 22 | (10) |
| Lubricator | 52 | (25) |

Features:
- Space saving integral gauge
- Manifold style regulators available
- OSHA compliant shut-off valves
- Soft-Start & Quick Dump valves
- Electronic Proportional Regulator



## P32 Compact Series

60mm body width

1/4", 3/8", & 1/2" Ported

| Flows up to: | scfm | ($dm^3/s$, ANR) |
|---|---|---|
| Filter | 82 | (39) |
| Coalescer | 36 | (17) |
| Regulator | 165 | (78) |
| Filter/Regulator | 136 | (64) |
| Lubricator | 90 | (42) |

Features:
- Manifold style regulators available
- OSHA Compliant shut-off valves
- Soft-Start & Quick Dump valves
- Electronic Proportional Regulator

## P33 Standard Series

73mm body width

1/2" & 3/4" Ported

| Flows up to: | scfm | ($dm^3/s$, ANR) |
|---|---|---|
| Filter | 85 | (40) |
| Coalescer | 72 | (34) |
| Regulator | 233 | (111) |
| Filter/Regulator | 230 | (108) |
| Lubricator | 150 | (71) |

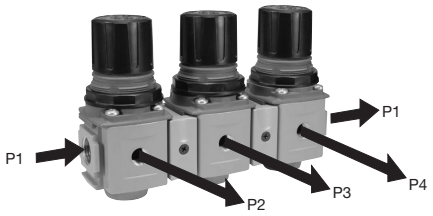
Features:
- OSHA Compliant shut-off valves
- Soft-Start & Quick Dump valves (Utilizes P32 size only)
- Electronic proportional regulator (Utilizes P32 size only)

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

# Complete Pneumatic System

## Common Port Manifold Regulators

- Multiple output pressures (P2, P3, P4, etc.) with common inlet (P1)
- Available in two sizes P31 and P32
- Balanced valve design for accurate pressure regulation
- Outlet pressure ports in front and rear of unit.
- Multiple spring ranges available



## Electronic Proportional Regulator

- Electro-Pneumatic regulator
- Integrated systems control
- Accurate output pressure
- Micro parameter settings
- Selectable I/O parameters
- Quick, full flow exhaust
- LED display indicates output pressure
- No air consumption in steady state
- Multiple mounting options
- Protection to IP65

**P31P Mini Series**

**P32P Compact Series**

## Semi Precision Regulator and Filter/Regulator

- Available in P32 compact series
- Fine adjustment sensitivity
- Good repeatability and minimal pressure drop
- Good flow capacity
- Light gray knob for easy identification

## Optional Tamperproof Kits

- One facilitates the permanent tamperproofing of the Regulator and Filter/Regulator units
- Hinged black part clamps over control knob and is locked in place after sliding yellow cover over it
- Other allows for removable lockout/tagout tamperproofing
  - Four pad lock location holes tagout
  - Hinged locking clamp secures over existing knob via yellow cover which is slid over into place

## Additional Options P32 Only (Consult factory for availability)

- T-Handle

- Preset and Tamperproof

- Preset
- Pressure Limiter

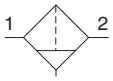
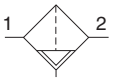
# P31 Particulate Filter – Mini

- Integral 1/4" ports (NPT, BSPP & BSPT)
- High efficiency 5 micron element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminum construction
- One hand operation for easy element cartridge removal
- Positive bayonet latch to ensure correct & safe fitting



Manual drain



Pulse drain

| Port Size | Description ‡ | Part Number |
|---|---|---|
| 1/4" | Poly Bowl, Manual Drain | **P31FB92EGMN** |
| 1/4" | Poly Bowl, Pulse Drain | **P31FB92EGBN** |
| 1/4" | Metal Bowl, Manual Drain | **P31FB92EMMN** |
| 1/4" | Metal Bowl, Pulse Drain | **P31FB92EMBN** |

‡ For polycarbonate bowl, see caution in Engineering Section A.

## Operating information

| | |
|---|---|
| Supply pressure (max): | |
| Plastic bowl | 150 psig (10 bar) |
| Metal bowl | 250 psig (17 bar) |
| Operating temperature: | |
| Plastic bowl | 14°F to 125°F (-10°C to 52°C) |
| Metal bowl | 14°F to 150°F (-10°C to 65.5°C) |
| Standard filtration: | 5 micron |
| Flow capacity*: | 25 scfm (12 $dm^3/s$, ANR) |
| Useful retention†: | 0.4 US oz. (12 $cm^3$) |
| Weight: | 0.24 lb (0.11 kg) |

* Inlet pressure 91.3 psig (6.3 bar). Pressure drop 4.9 psig (0.34 bar).
† Useful retention refers to volume below the quiet zone baffle.

**Air quality:**
Within ISO 8573-1: 1991 Class 3 (Particulates)
Within ISO 8573-1: 2001 Class 6 (Particulates)

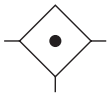
# P31 Coalescing and Adsorber Filters – Mini

- Integral 1/4" ports (NPT, BSPP & BSPT)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Differential Pressure Indicator (DPI) standard on coalescing filters
- Positive bayonet latch to ensure correct and safe fitting
- Adsorbing activated carbon element removes oil vapors and most hydrocarbons

Note: To optimize the life of coalescing element, it is advisable to install a P31F pre-filter with a 5 micron element upstream of the coalescing filter.

To optimize the life of an Adsorber it is advisable to install a P31 Coalescing Filter upstream of the Adsorber. Adorber element should be replaced approximately every 1000 hours of service.



| Port Size | Description ‡ | Element | Part Number |
|---|---|---|---|
| 1/4" | Poly Bowl, Manual Drain | 0.01 micron | **P31FB92DGMN** |
| 1/4' | Poly Bowl, Pulse Drain | 0.01 micron | **P31FB92DGBN** |
| 1/4" | Metal Bowl, Manual Drain | 0.01 micron | **P31FB92DMMN** |
| 1/4' | Metal Bowl, Pulse Drain | 0.01 micron | **P31FB92DMBN** |

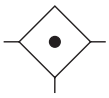
# P33 Coalescing and Adsorber Filters – Standard

- Integral 1/2" or 3/4" ports (NPT, BSPP & BSPT)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Differential Pressure Indicator (DPI) standard on Coalescing Filters
- Positive bayonet latch to ensure correct & safe fitting
- Adsorbing activated carbon element removes oil vapors and most hydrocarbons

Note: To optimize the life of coalescing element, it is advisable to install a P33F pre-filter with a 5 micron element upstream of the coalescing filter.

To optimize the life of an Adsorber it is advisable to install a P33 Coalescing Filter upstream of the Adsorber. Adsorber element should be replaced approximately every 1000 hours of service.



| Port Size | Description ‡ | Element | Part Number |
|---|---|---|---|
| 1/2" | Poly Bowl, Manual Drain | 0.01 micron | **P33FA94DGMN** |
| 1/2" | Poly Bowl, Auto Drain | 0.01 micron | **P33FA94DGAN** |
| 1/2" | Metal Bowl, Manual Drain | 0.01 micron | **P33FA94DSMN** |
| 1/2" | Metal Bowl, Auto Drain | 0.01 micron | **P33FA94DSAN** |
| 3/4" | Poly Bowl, Manual Drain | 0.01 micron | **P33FA96DGMN** |
| 3/4" | Poly Bowl, Auto Drain | 0.01 micron | **P33FA96DGAN** |
| 3/4" | Metal Bowl, Manual Drain | 0.01 micron | **P33FA96DSMN** |
| 3/4" | Metal Bowl, Auto Drain | 0.01 micron | **P33FA96DSAN** |

‡ For polycarbonate bowl, see caution in Engineering Section A.

## Operating information

| | |
|---|---|
| Supply pressure (max): | |
| Poly bowl | 150 psig (10 bar) |
| Metal bowl w/ DPI | 150 psig (10 bar) |
| Metal bowl w/o DPI | 250 psig (17 bar) |
| Operating temperature: | |
| Plastic bowl | -13°F to 125°F (-25°C to 52°C) |
| Metal bowl | -13°F to 150°F (-25°C to 65.6°C) |
| Standard filtration: | 1.0 and 0.01 micron |
| Adsorber | Max. oil carryover (ppm w/w) 0.003 @ 70°F (21°C) |
| Flow capacity*: | |
| 1.0 micron coalescing | 68 scfm (32 $dm^3/s$, ANR) |
| 0.01 micron coalescing | 42 scfm (20 $dm^3/s$, ANR) |
| Activated carbon adsorber | 72 scfm (34 $dm^3/s$, ANR) |
| Useful retention†: | 2.8 US oz. (85 $cm^3$) |
| Weight: | 1.10 lb (0.50 kg) |

* Inlet pressure 91.3 psig (6.3 bar). Pressure drop 3 psig (0.2 bar), saturated element.
† Useful retention refers to volume below the quiet zone baffle.

## Flow Charts

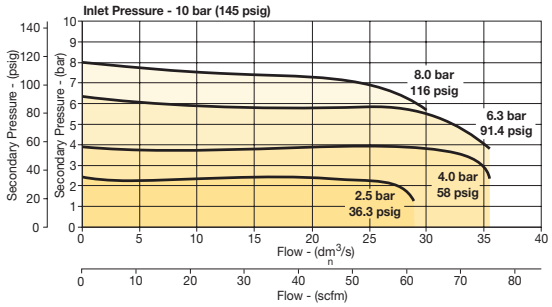
### P31RB 1/4" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

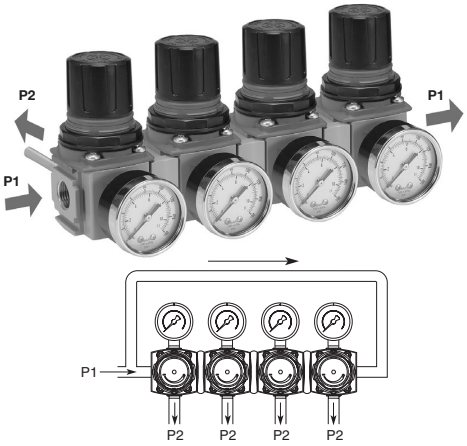
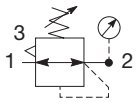
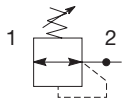
## P32 Common - P1 Regulator – Compact

- Manifold style regulator with line pressure on both sides.
- Pressure output is at front or rear.
- Inlet ports 1/4", 3/8" or 1/2" (NPT, BSPP & BSPT)
- Working port 1/4"
- Robust construction
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Relieving & non-relieving types
- Regulator will reverse flow as standard
- Non-rising knob





Self relieving regulator with gauge



Non-relieving regulator

## Technical Information

### Accuracy
+/- 1.0% of F.S.*

* Full scale (F.S.) - For 2 bar (29 psig) versions this will be 2 bar (29 psig), for the 10 bar (145 psig) version full scale will be 10 bar (145 psig).

### Air consumption
No consumption in stable regulated situation.

### Display
The regulator is provided with a digital display, indicating the output pressure, either in bar or psig.

The factory setting is as indicated on the label, can be changed through to software at all times (parameter 14)

### Supply voltage
24 VDC +/- 10%

### Power consumption
Max. 1.1W with unloaded signal outputs

### Control signals
The electronic pressure regulator can be externally controlled through an analogue control signal of either 0-10V or 4-20mA. (parameter 4).

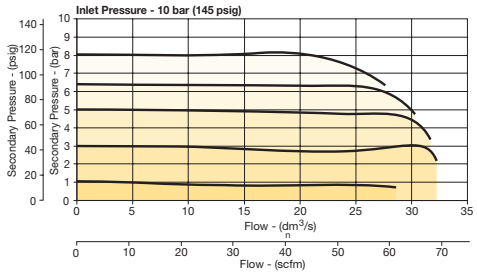
### Output signals
As soon as the output pressure is within the signal band a signal is given of 24VDC, PNP Ri = 1 kOhm
Outside the signal band this connection is 0V.

### Connections
(In case of output signal (Option D)
Central M12 connector 4-pole
The electrical connections are as follows:

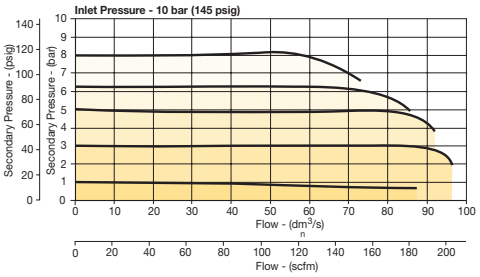
| Pin No. | | Function | Color |
|---|---|---|---|
| 1 | 24 V | Supply | Brown |
| 2 | 0 to 10 V | Control Signal Ri = 100k Ω | White |
| | 4 to 20mA | Control Signal Ri = 500 Ω | |
| 3 | 0 V (GND) | Supply & Set Point Ground | Blue |
| 4 | 24 V | Alarm Output Signal | Black |

## Flow Charts

### P31P Regulator 1/4" Ports



### P32P Regulator 1/2" Ports



**Degree of protection:** IP65

### EU conformity
CE: standard
EMC: according to directive 89/336/EEC
This pressure regulator is in accordance with:

**EN 61000-6-1:2001** **EN 61000-6-2:2001**
**EN 61000-6-3:2001** **EN 61000-6-4:2001**

### Mounting position
Preferably vertical, with the cable gland on top.

### Materials: P31P & P32P

| | |
|---|---|
| Magnet core | Steel |
| Solenoid valve poppet | FPM |
| Solenoid valve housing | Techno polymer |
| Regulator body (P31P & P32P versions) | Aluminum |
| Regulator top housing | Nylon |
| Valve head | Brass & NBR |
| Remaining seals | NBR |

## How to change parameters – How to Videos available at www.parker.com/pneu/propreg

Pressing the Accept key "acc" for more than 3 seconds, will activate parameter change mode. The user can then select the parameters by pressing up or down key (display will show Pxx). When parameter number is correct, pressing accept again will enter parameter number (display will show parameter value).

Pressing the up or down key will change the parameter itself (display will flash indicating parameter editing mode). Pressing the accept key will accept the new parameter value (all digits will flash whilst being accepted).

After releasing all keys, the next parameter number will be presented on the display (you may step to the next parameter). When no key is pressed, after 3 seconds the display will show the actual output pressure.

When the unit is initially powered up allow approximately 10 seconds for the unit to "boot-up" before changing parameter settings.

Only parameter numbers 0, 4, 6, 8, 9, 14, 18, 19, 20, 12, 13 and 21 are accessible to edit. All other parameters are fixed.

**Manual mode:**
When keys DOWN and UP are pressed during startup, (connecting to the 24V power supply) manual mode is activated. This means that the user is able to in/decrease the output pressure of the regulator, by pressing the UP or DOWN key. During this action the display will blink, indicating that the manual mode is activated. After powering up again, the unit will revert back to normal mode.

## Back to Factory Setting

After start up. (Power is on)
Entering this value in parameter 0 will store the calibrated factory data into the working parameters.
(Default calibration data is used)

### Parameter Number 0 – Reset Back to Factory Settings

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P00 | 000.<br>Flashing Decimal | 003.<br>Flashing Decimal | 003<br>Flashing | P01 |
| Description | Accesses changeable parameters. | Accesses parameter no. 0. | Displays current parameter value. | Edits parameter. 3 = standard factory settings. If other than 3, use Up or Down Arrow and accept 3 | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Control Signal

The unit is factory set for 0-10 V control signal. If 4-20 mA control signal is required, change parameter 4.

### Parameter Number 4 – Set Control Signal in Volts or Milliamps

| Step | 1 | 2 | 3 | 4 | 5 | |

## Set Output Signal

Parameter 6 is used to set the type of output signal to your PLC.
This parameter is used as follows:

Output Signal option "0" = Digital Output – PNP
- Factory set at "0" Non Adjustable

Output Signal option "P" = Digital PNP or Analog 1-10V
- Factory set at "1" for Analog Signal
- Convert to Digital PNP by changing parameter to "0" setting

Output Signal option "N" = Digital NPN or Analog 1-10V
- Factory set at "1" Analog Signal
- Convert to Digital NPN by changing parameter to "0"

Output Signal option "M" = Analog 4-20 mA
- Factory set at "2" Non Adjustable

### Parameter Number 6 – Set Output Signal

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P06 | 001.<br>Flashing Decimal | ###.<br>Flashing Decimal (Value 0, 1 or 2) | ###.<br>Flashing | P07 |
| Description | Accesses changeable parameters. | Accesses parameter no. 6. | Displays current parameter value. 1 = m factory default for P3H with analog options | Edits parameter. 0 = digital (NPN or PNP) 1 = analog 0..10V 2 = analog 4..20 mA | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Adjust Span Analog Output Signal

Set value is a % of Full Analog range. As an example for a 0-10V output signal, the original factory setting of 100% will give you an adjustment of 0-10V. If you reset Parameter 8 to 50%, the new output range would be 0-5V or 50% of the full range.

In the event that the output signal is to low, in a certain application, you can adjust it by increasing Parameter 8 to a maximum value of 130% of scale.

Note that all values are nominal and that an actual measurement may be required to ensure signal strength.

### Parameter Number 8 – Adjust Span Analog Output Signal

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P08 | 100.<br>Flashing Decimal (For 2 bar versions value = 92) | ###.<br>Flashing Decimal (Value between 0 and 130) | ###.<br>Flashing | P09 |
| Description | Accesses changeable parameters. | Accesses parameter no. 8. | Displays current parameter value. | Edits parameter. | Accepts and saves new parameter setting and implements the new analog signal span. | Sequences to next parameter. |

## Adjust Digital Display

If necessary, adjustments can be made to the digital display when using an external pressure sensor.

### Parameter Number 9 – Adjust Digital Display Value (Pressure Calibration)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P09 | ###.<br>Flashing Decimal | ###.<br>Flashing Decimal | ###<br>Flashing | P 10 |
| Description | Accesses changeable parameters. | Accesses parameter no. 9. | Displays current digital display | Use up or down arrows and accept to adjust the display value if using an external pressure sensor. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Pressure Scale

Units with NPT port threads are supplied with a factory set psig pressure scale. Use parameter 14 to change scale to bar.

### Parameter Number 14 – Set Pressure Scale in psig or bar

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P 14 | 001.<br>Flashing Decimal | 000.<br>Flashing Decimal | 000<br>Flashing | P 15 |
| Description | Accesses changeable parameters. | Accesses parameter no. 14. | Displays current parameter value.<br>1 = psig<br>0 = bar<br>2 = MPa | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Preset Minimum Pressure

If there is a need for a pre-set Minimum pressure, use parameter 18. (Note: preset pressure is affected by % P19.)

### Parameter Number 18 – Set Minimum Preset Pressure

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| **Press** | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| **Until Display Reads** | Pxx | P 18 | 000. | # # #.<br>Flashing Decimal (value between 0 and 200) | # # #<br>Flashing | P 19 |
| **Description** | Accesses changeable parameters. | Accesses parameter no. 18. | Displays current parameter value. Incremental value is:<br>2 bar unit:<br>x 2 mbar x % P19<br>10 bar unit:<br>x 10 mbar x % P19 | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Pressure Correction

Pressure correction allows the user to set a Maximum pressure as a percentage of secondary pressure F.S.

**Example:** If F.S. is 10 bar, set parameter 19 to 50 for Maximum preset pressure of 5 bar.

Pressure correction also affects the Minimum preset pressure in parameter 18.

**Example:** If F.S. is 10 bar and parameter 18 is set to a value of 100 (1 bar), and parameter 19 is set to 50%, then the actual Minimum preset pressure seen is 0.5 bar.

### Parameter Number 19 – Set Maximum Preset Pressure

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| **Press** | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| **Until Display Reads** | Pxx | P 19 | 100. | # # #.<br>Flashing Decimal (value between 0 and 100) | # # #<br>Flashing | P20 |
| **Description** | Accesses changeable parameters. | Accesses parameter no. 19. | Displays current parameter value. Incremental value is:<br>% of F.S. | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Behavior Control

The regulation speed of the pressure regulator can be modified by means of one parameter. (P 20)
The value in this parameter has a range from 0-5. A higher value indicates slower regulation speed, but will be more stable.

### Parameter Number 20 – Set Behavior Control

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P20 | 003. | ###.<br>Flashing Decimal (value between 0 and 5) | ###<br>Flashing | P21 |
| Description | Accesses changeable parameters. | Accesses parameter no. 20. | Displays current parameter value. | Edits parameter<br>0 = custom set*<br>1 = fastest (narrow proportional band)<br>2 = fast<br>3 = normal<br>4 = slow<br>5 = slowest (proportional band is broad) | Accepts and saves new parameter setting. | Sequences to next parameter. |

* When the value 0 is entered, you are able to create your own custom settings true parameters 12, 13 and 21.

## Fine Settings
## Set Proportional Band

Proportional band is used for setting the reaction sensitivity of the regulator. The displayed value is X 10 mbar and has a range between 50 (0.5 bar) and 250 (2.5 bar).

### Parameter Number 12 – Set Proportional Band (P20 Must be Set to 0)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P12 | 100.<br>Flashing Decimal | ###.<br>Flashing Decimal (value between 50 and 250) | ###<br>Flashing | P13 |
| Description | Accesses changeable parameters. | Accesses parameter no. 12. | Displays current parameter value. Incremental value is: x 10 mbar | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Deadband

Deadband is the Minimum limit of accuracy at which the regulator is set for normal operation. The displayed value is X 10 mbar and has a range between 4 (40 mbar) and 40 (400 mbar).

### Parameter Number 13 – Set Deadband (P20 Must be Set to 0)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P 13 | 0 15.<br>Flashing Decimal | # # #.<br>Flashing Decimal (value between 4 and 40) | # # #<br>Flashing | P 14 |
| Description | Accesses changeable parameters. | Accesses parameter no. 13. | Displays current parameter value. Incremental value is x 10 mbar | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Proportional Effect

### Parameter Number 21 – Set Proportional Effect (P20 Must be Set to 0)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P21 | 0 10.<br>Flashing Decimal | # # #.<br>Flashing Decimal (value between 5 and 100) | # # #<br>Flashing | P22 |

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## Gauges

| | | |
|---|---|---|
| **50mm (2") round 1/4" center back mount** | 0-30 psig / 0-2 bar | **K4520N14030** |

# P32 Semi-Precision Filter / Regulators – Compact

- Integral 1/4", 3/8" or 1/2" ports (NPT, BSPP & BSPT)
- High efficiency 5 micron element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminum construction
- Positive bayonet latch to ensure correct & safe fitting
- Secondary pressure ranges
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation

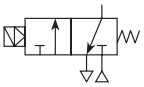
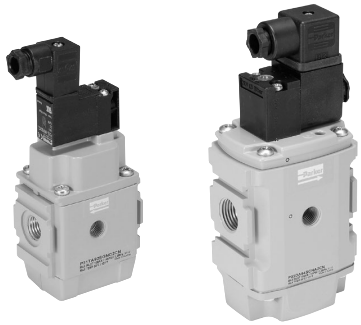
# P31D & P32D Dump Valves

- Modular design with 1/4" or 1/2" integral ports (NPT, BSPP & BSPT)
- The 3-way, 2-position function automatically dumps downstream pressure on the loss of pilot signal
- Solenoid or air pilot options
- High flow & exhaust capability
- Silencer included





Remotely operated dump valves automatically shut off upstream pressure and exhaust the downstream pressure when the pilot pressure is released.

To maintain these units in the open position a pilot supply to the air pilot operated version or an electrical signal to the solenoid operated version must be maintained.

The valve will automatically dump when the holding signal is removed.

| Port Size | Description | Weight lbs (kg) | Part Number |
|---|---|---|---|
| 1/4" | 120VAC Solenoid & cable plug | 0.8 (0.37) | **P31DA92SGNC1FN** |
| 1/4" | 24VDC Solenoid & cable plug ‡ | 0.9 (0.41) | **P31DA92SGNC2CN** |
| 1/4" | External air pilot operated | 0.8 (0.37) | **P31DA92PPN** |
| 1/2" | 120VAC 30mm coil & cable plug incl. ‡ | 1.5 (0.69) | **P32DA94SCNA3GN** |
| 1/2" | 24VDC 30mm coil & cable plug incl. ‡ | 2.0 (0.91) | **P32DA94SCNA2CN** |
| 1/2" | External air pilot operated ‡ | 1.9 (0.87) | **P32DA94PPN** |

‡ Includes exhaust silencer

## Operating information

| | | |
|---|---|---|
| Flow capacity*: | P31D | 36 scfm (17 dm³/s, ANR) |
| | P32D | 108 scfm (51 dm³/s, ANR) |
| Temperature range (max)†: | | |
| Solenoid operated | | 14°F to 122°F (-10°C to 50°C) |
| Air pilot operated | | -4°F to 176°F (-20°C to 80°C) |
| Pressure (max): | | |
| Solenoid operated | | 150 psig (10 bar) |
| Air pilot operated | | 250 psig (17 bar) |
| Operating pressure (min): | | 44 psig (3 bar) |
| Fluid: | | Compressed air |
| Ports: | Air pilot | 1/8 |
| | Exhaust | P31D - 1/4; P32D - 1/2 |
| | Gauge | P31D - 1/8; P32D - 1/4 |

* Inlet pressure 91.3 psig (6.3 bar), inlet pressure and 14.5 psig (1 bar) pressure drop.

† Air supply must be dry enough to avoid ice formation at temperatures below 35.6°F (2°C). Snap pressure: Full flow when downstream pressure reaches 50% of the inlet pressure.

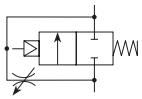
# P31S & P32S Soft Start Valves

- Modular design with 1/4" or 1/2" integral ports (NPT, BSPP & BSPT)
- The 2-way, 2-position function provides for the safe introduction of pressure
- Adjustable slow start
- Solenoid or air pilot options
- High flow



Parker Global Series Soft Start Valves, provide for the safe introduction of pressure to machines or systems. Soft Start Valves, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.

**Note:** Soft Start Valves must be installed downstream of a 3/2 valve with exhaust capability

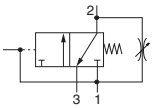
# P31T & P32T Combined Soft Start / Dump Valves

- Modular design with 1/4" or 1/2" integral ports (NPT, BSPP & BSPT)
- Provides for the safe introduction of pressure
- The 3-way, 2-position function automatically dumps downstream pressure on the loss of pilot signal
- Adjustable slow start
- Solenoid or air pilot options
- High flow & exhaust capability
- Silencer included



Parker Global Series Combined Soft Start / Dump Valves, provide for the safe introduction of pressure to machines or systems. Soft Start / Dump Valves when set, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.

To maintain these units in the open position a pilot supply to the air pilot operated version or an electrical signal to the solenoid operated version must be maintained. The valve will automatically dump when the holding signal is removed.

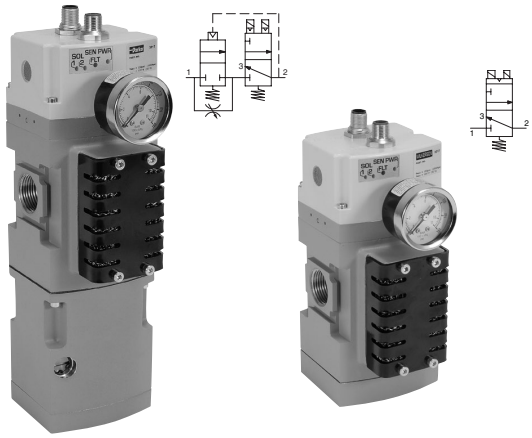
# P33D & P33T Safety Exhaust Valves

- Easy electrical interface with M12 connectors to safety circuit
- External monitoring provides a cost and space saving advantage
- Solid state pressure sensors provide accurate, fast fault detection
- Quick visual LED indicators on the front of the valve
- Superior seated seal design for longer life
- Safety exhaust outlet is no-maintenance and non-clog by design
- Suitable for stand alone use or modular mounting to P32 or P33 FRL assembly
- High B10 life value
- Fast exhaust times allow for smaller machine footprint



(optional soft start)

## Operating information

| | |
|---|---|
| Operating pressure: | 30 to 150 PSIG (2 to 10 bar) |
| Minimum operating pressure: | 30 PSIG (2 bar) |

### Safety Exhaust Valve Function

When applications demand a safe environment you can count on safety valves from Parker Hannifin. The P33 family of safety exhaust valves are 3/2 normally closed valves designed to rapidly exhaust compressed air in the event of a fault condition and to provided monitored coverage ensuring safe function. The P33 is available in two distinct styles, internally* or externally monitored. The valve is suitable for use up to Category 4, performance level e. Monitoring is achieved externally via a two channel system connected to a safety interface device. Both valves are available with an adjustable soft start and high flow exhaust to shut your equipment down faster when needed. LED's provide clear status of main solenoid operation, sensor power and fault condition for quick visual reference.

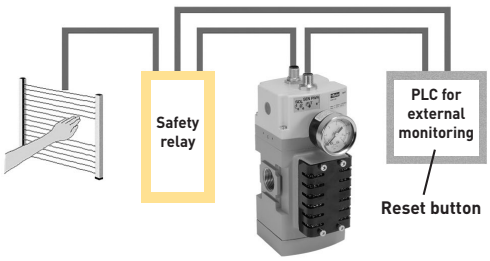
### Externally Monitored Valve, Faults and Resets

The externally monitored valve has the monitoring done via a PLC or relay which offers a size and cost advantage over internally monitored valves. The integration of a safety interface into the PLC or relay will help determined the achievable category and performance level of the control system. Customers are required to provide the logic function via the safety device. The valve will lock-out to the "safe state" if asynchronous movement of the valve elements occur which will be detected by solid state pressure sensors. To achieve the proper safety rating, the safety PLC or relay must monitor the solid state pressure sensors to ensure they are not in different states for more than 150ms. If the sensors are in different states for longer than 150ms then the programming logic must shut off power to the solenoids and consider it a fault condition. If during operation the externally monitored P33 enters a fault condition the valve will shut off. A separate reset signal must be incorporated into the logic sequence to avoid automatic restart of the valve. The safety exhaust valves are not for use with clutch or brake applications and are designed for use in conjunction with a safety relay or safety PLC for safe monitoring and fault detection.

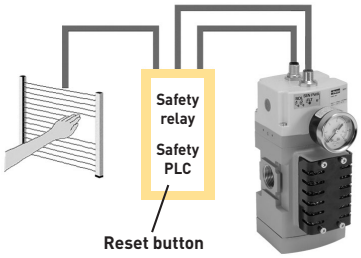
### Achieving Desired Performance Level **

The category and performance level (PLr) needed for your machine is determined by a risk assessment of the machinery design and application based on EN ISO 13849-1. The Parker P33 safety valve is designed for those applications requiring a PL of d or e. Please note these levels require other aspects of the system to meet these requirements. As a guide: you can achieve a Cat 4 PL e system by integrating monitoring via a programmable safety rated device. Because the P33 is a mechanical fail-safe device, the monitoring could also be done via a standard PLC and still attain as high as a PL d rating.

**Cat 3, PL d**

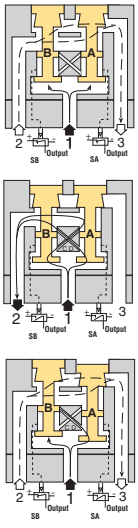


**Cat 4, PL e**



* For information on internally monitored safety valves reference Bulletin 0700-B13.

** An integration guide is available to provide further information on connecting the safety valve product to achieve the desired performance level. Please consult Parker and the standard EN ISO 13849-1 for more information.



### Conditions at Start

The Safety exhaust valve starts with inlet 1 closed to outlet 2 by both valve elements A and B. Outlet 2 is open to exhaust 3. Pressure signals at both sensors SA and SB are exhausted and contacts 1 and 2 of sensors SA and SB are connected. The normally closed sensors both provide voltage feedback signals to the external monitoring system.

### Normal Operation

During normal operation the two solenoids are simultaneously energized which actuates both pilots and causes valve elements A and B to shift. Inlet 1 is then connected to outlet 2 via crossflow passages C and D. Exhaust 3 is closed. Sensing pressure signals go to each pressure sensor and become equal to inlet pressure. Both sensors contacts open and no voltage signals are provided to the external monitoring system. This indicates that both sides of the valve actuated as expected.

### Detecting a Malfunction

A malfunction in the system or the valve itself could cause one valve element to be open and the other closed. Air then flows past the inlet poppet on valve element A, into crossflow passage D, but is substantially blocked by the spool portion of element B. The large size of the open exhaust passage past element B keeps the pressure at the outlet port below 2% of inlet pressure. Full sensing air pressure from side A goes to sensor SA, and a reduced pressure goes to sensor SB. This full pressure signal causes SA to open. Sensor SB, with a reduced pressure signal, does not open. An external monitoring system can detect the malfunction by monitoring the outputs of the SA and SB sensors. The external monitor system must then react accordingly by shutting down the power to the valve solenoids and any other components deemed necessary to stop the machine.

## Machinery Directive - Overview

The Machinery Directives' goal is to protect people and the environment from accidents caused from all types of machinery. Based on the standard EN 13849 [safety of machines; safety-related parts of control systems] these standards build the procedure to assess safety-related control systems.

Required Performance Level (PLr) based on a risk assessment are now commonly used to determine the safety level required for the controls system, for the application of machinery.

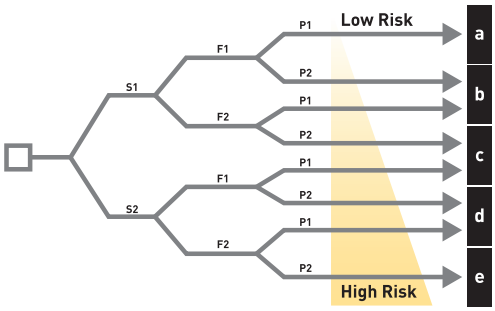
Performance Level (PL) based on the original B, 1,2,3,4 safety categories, diagnostic capabilities, Mean time to dangerous failure (MTTFd), and common cause failure (CCF), define safety levels of a given safety function. This ensures that safety is not just focused on component reliability, but instead introduces common sense safety principles such as redundancy, diversity, and fail-safe behavior of safety related control parts.

The new EN 13849 standards of the Machinery Directive dictates the machine is safe when the Performance Level of the safety control circuit is equal to or greater than the Required Performance Level of the application. When determining the required performance level, the greater the risk, the higher the requirements of the control system.

$$PLr \leq PL$$

### Determining PLr According to EN 13849-1

The level of each hazardous situation is classified in five Performance levels from a to e. With PL a the control functions contribution to risk reduction is low, while at PL e it is high. The risk graph above can be used as a guideline to determine the required performance level PLr for safety function.



### Risk Parameters

**(S) Severity of injury**

- **S1 Slight (normally reversible injury)**
- **S2 Serious (normally irreversible injury, or death)**

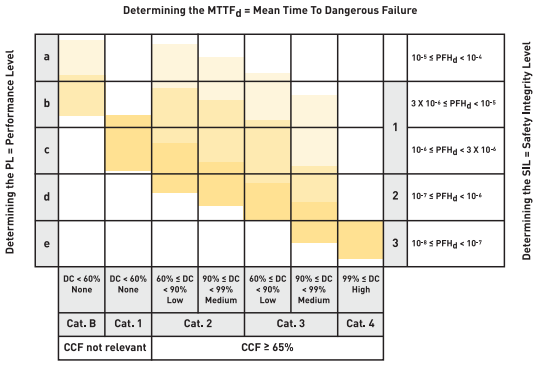
**(F) Frequency and / or duration of exposure to hazard**

- **F1 Seldom to less often and / or brief**
- **F2 Frequent to continuous and / or long**

**(P) Possibility of avoiding the hazard**

- **P1 Possibility of avoiding the hazard**
- **P2 Scarcely ever possible**

### Determining PL According to EN 13849-1



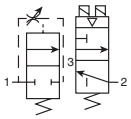
### Categories Defined by EN 13849-1

| Category | Summary |
|---|---|
| Category B | When a fault occurs it can lead to the loss of the safety function. |
| Category 1 | Same that Category B, but loss of the safety function is less likely thanks to a good MTTFd of each channel. |
| Category 2 | System behavior allow that the occurrence of a fault can lead to the loss of the safety function between the checks; the loss of the safety function is detected by the check. |
| Category 3 | A single fault in any of safety related parts does not lead to the loss of the safety function. Whenever reasonably possible the single fault shall be detected at or before the next demand upon the safety function. (Means redundancy) |
| Category 4 | Same as Category 3, but if detection of single fault is not possible on or before the next demand upon the safety, an accumulation of these undetected faults shall not lead to the loss of the safety function. (Means redundancy & check) |

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

# P33T Redundant Safety Exhaust Valve

- Proven control reliable technology with integrated soft start
- Soft start application of air to the system when energized; can be adjusted for slower or faster buildup of system pressure
- Rapid exhaust of downstream air when de-energized to remove stored energy and allow safe access
- Memory, monitoring, and air flow control functions are integrated into two identical valve elements. Valves lock-out if asynchronous movement of valve elements occurs during actuation or de-actuation, resulting in a residual outlet pressure of less than 1% of supply.
- Reset can only be accomplished by the integrated electrical (solenoid) reset. Cannot be reset by removing and re-applying supply pressure.
- Basic 3/2 normally closed valve function: Dirt tolerant, wear compensating poppet design for quick response and high flow capacity.
- LED indicators of main solenoid operation, reset solenoid operation, and status indicator condition.
- Optional transducer for monitoring of downstream pressure in the system.
- Dual exhaust silencers included.
- Not for use with clutch / brake applications.
- For use in conjunction with a safety relay or safety PLC.



| Port size | | | Cv | | |
|---|---|---|---|---|---|
| Inlet | Outlet | Transducer | 1 to 2 | 2 to 3 | Part Number* |

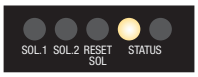
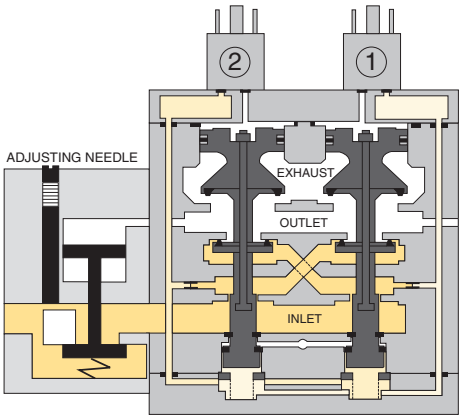
## Valve de-actuated (ready-to-run):

The flow of inlet air pressure to the inlet chamber of the main valve internals is restricted by a fixed orifice and an adjustable flow control as well as an air piloted 2-way normally closed poppet valve. The flow of inlet air pressure into the crossover passages is restricted by the size of the passage between the stem and the valve body opening. Flow is sufficient to quickly pressurize pilot supply / timing chambers 1 and 2. The inlet poppets prevent air flow from crossover passages into the outlet chamber. Air pressure acting on the inlet poppets and return pistons securely hold the valve elements in the closed position. (Reset adapter omitted for clarity.)

The green “Status” LED will be illuminated indicating the valve is operational.



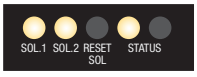


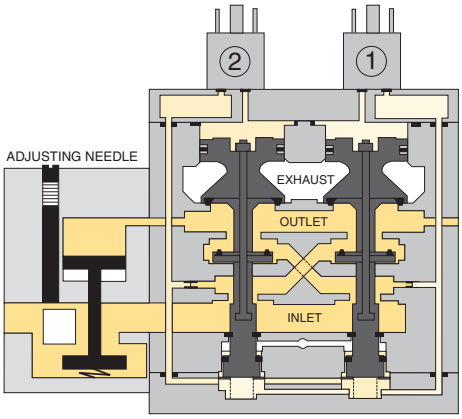
## Valve actuated:

Energizing the pilot valves simultaneously applies pressure to both pistons, forcing the internal parts to move to their actuated (open) position, where inlet air flow to crossover passages is fully open, inlet poppets are fully open and exhaust poppets are fully closed. The outlet is then pressurized at a rate allowed by the fixed orifice and the adjusted flow control. Once the air pressure in the outlet chamber reaches approximately 60% of inlet pressure, the air piloted 2-way normally closed poppet valve opens fully and the pressure in the inlet, crossovers, outlet, and timing chambers are quickly equalized. The adjustable flow control will control the time it takes for the outlet air pressure to reach approximately 60% of inlet pressure.

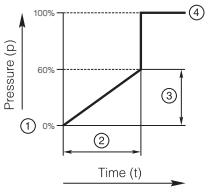
De-energizing the pilots quickly causes the valve elements to return to the ready-to-run position.

Solenoid 1, Solenoid 2 and the green “Status” LED’s will be illuminated indicating the valve is operating properly.





## Soft start function:



① Start signal
② Switching time delay
③ Gradual pressure build up
④ Operating pressure $p^2$ (=$p^1$)

For inventory, lead times, and kit lookup, visit www.pdnplu.com

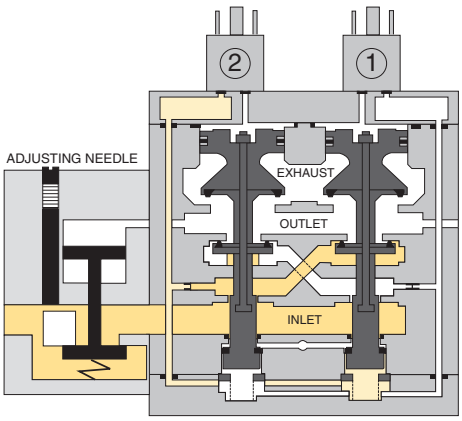
**Parker Hannifin Corporation**
Pneumatic Division
Richland, Michigan
www.parker.com/pneumatics

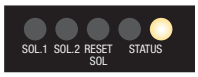
## Valve fault and lock-out:

Whenever the valve elements operate in a sufficiently asynchronous manner, either on actuation or de-actuation, the valve will move to a locked-out position. In the locked-out position, one crossover and its related timing chamber will be exhausted, and the other crossover and its related timing chamber will be fully pressurized. The valve element (side 2) that is partially actuated has pilot air available to fully actuate it, but no air pressure on the return piston to fully de-actuate the valve element.

Air pressure in the crossover acts on the differential of side 2 stem diameters creating a latching force. Side 1 is in a fully closed position, and has no pilot air available to actuate, but has full pressure on the inlet poppet and return piston to hold the element in the fully closed position. Inlet air flow on side 1 into its crossover is restricted, and flows through the open inlet poppet on side 2, through the outlet into the exhaust port, and from the exhaust port to atmosphere. Residual pressure in the outlet is less than 1% of inlet pressure. The return springs are limited in travel, and can only return the valve elements to the intermediate (locked-out) position. Sufficient air pressure acting on the return pistons is needed to return the valve elements to a fully closed position.

The red “Status” LED will be illuminated indicating the valve in fault and lock-out must be reset





## Valve reset (electrical or manual):

The reset procedure is as follows:

- Remove the electrical signals to the main coils
- Ensure there is air supplied to the valve
- Energize the reset solenoid for a minimum of 200 ms
- Allow a 200 ms delay after de-energizing the reset solenoid and re-energizing the main solenoids

The valve will remain in the locked-out position, even if the inlet air supply is removed and re-applied.

A remote reset signal must be applied to reset the valve. A momentary, remote electrical signal must be applied to the reset solenoid to apply pressure to the reset pistons in the valve. Actuation of the reset piston physically pushes the main valve elements to their closed position. Inlet air fully pressurizes the crossovers and holds the inlet poppets on seat. Actuation of the reset piston opens the reset poppet, thereby, immediately exhausting pilot supply air, thus, preventing valve operation during reset (Reset adapter added to illustration.). De-actuation of reset pistons causes the reset poppets to close and pilot supply to fully pressurize. Reset air pressure is applied by a 3/2 normally closed solenoid, or a manual push button mounted on the reset adapter in the top valve cover.

The green “Status” LED will be illuminated once the valve is reset.

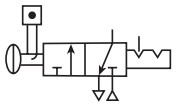
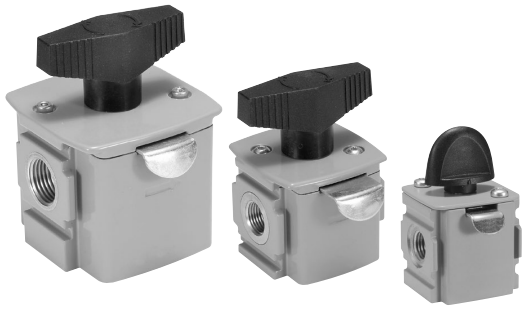
# Ball Valve / Lockout Valve

The Ball / Lockout Valve shuts off downstream line pressure in the closed position with a 90° turn of the handle. In the closed position, inlet air pressure is blocked and downstream / system air is exhausted through a threaded port. To prevent unauthorized adjustment, the padlock slide may be assembled on either side. It is recommended that this slide is installed after final system assembly.

The Safety Lockout valves conform to OSHA #29 CFR part 1910 — control of hazardous energy source (lockout / tagout).

**Note:** This padlock slide is a permanent assembly and may not be removed later, any unauthorized tampering will void any warranty claims. The valve can only be locked in the closed position.





## Operating information

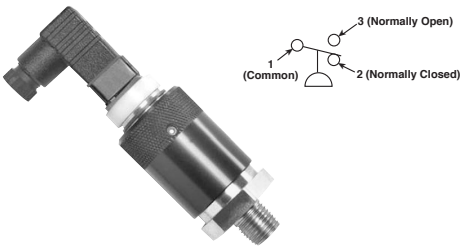
# PPS1 Pressure Switch

- Long life elastomer diaphragm
- High quality snap action switch
- Field adjustable
- Compact design
- Easily customized
- Quick delivery
- NEMA 4, 13



## Definitions and Terminology

**Repeatability —** Accuracy is the maximum allowable set point deviation of a single pressure or temperature switch under one given set of environmental and operational conditions.

**Single Pole Double Throw (SPDT) Switching element —** A SPDT switching element has one normally open, one normally closed and one common terminal. Three terminals mean that the switch can be wired with the circuit either normally open (NO), or normally closed (NC), or both.

**Dead Band —** The dead band, sometimes referred to as "differential" or "hysteresis", is the change in pressure between actuation and deactuation set points.

## Operating information

| | |
|---|---|
| Temperature range: | -40°F to 105°F (-40°C to 220°C) |
| Operating pressure range: | 1, 2, 3 - 250 PSI (17.2 bar)<br>4 - 2000 PSI (137.9 bar) |
| Set point tolerance | ±1 PSI or 5% (.07 bar) |
| Deadband | 10 - 20% of set pressure |
| Current rating | 3A @ 125 VAC<br>2A @ 30 VDC (Resistive) |
| Circuit form | SPDT Standard |
| Cycle life | 1 Million |

| Adjustment knob | Anodized aluminum |
| Body | Brass |
| Diaphragm | Nitrile |

## Operation

The pressure switch monitors the air pressure in your pneumatic system. When the pressure in your system either drops below or exceeds the set point pressure, an electrical output is given.

☐ Most popular.

## Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavorable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the Maximum life of relays in the circuit (and particularly of transistors, thyristors and integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All connectors/cable plugs EN175301-803 with LED's include this type of circuit protection.

## Materials

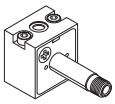
### Pilot Valve

| | |
|---|---|
| Body: | Polyamide |
| Armature tube: | Brass |
| Plunger & core: | Corrosion resistant Cr-Ni steel |
| Seals: | Fluorocarbon |
| Screws: | Stainless steel |

### Coil

| | |
|---|---|
| Encapsulation material: | Thermoplastic as standard Duroplast for M12 connection |

## Spare Base Solenoid Pilot Operator CNOMO NC



| Description | Part number non-lock manual override | Weight (kg) |
|---|---|---|
| Standard Duty | **P2FP23N4B** | 0.065 |
| No Override | **P2FP23N4A** | 0.065 |

**Note:** Solenoid pilot operators are fitted to the Global range. Order the above part numbers for spares. The operators are supplied with mounting screws and interface 'O' rings. Coils and connectors must be ordered separately.

C
P3Y Products

## P3Y System

The P3Y system allows units to be connected together without the use of pipe connectors. This saves space, provides constant mounting centers, and maintains a modern aesthetically pleasing appearance.

The P3Y filters are specially designed to efficiently filter out rust, dirt, moisture and other impurities from compressed air lines. Operation is fully automatic with a minimum of pressure drop. Coalescing filters and adsorber filters for high purity air are also included in the P3Y series.

The P3Y regulators are designed to provide quick response and accurate pressure regulation for the most demanding hi-flow industrial applications.

The rolling diaphragm was designed for long trouble-free operation and will not rupture or tear under high cycle or demanding applications. The P3Y mist lubricators are designed to provide lubrication for many general purpose applications.

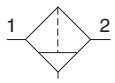
# P3Y Particulate Filter

- Integral 3/4" or 1" ports (NPT & BSPP)
- High efficiency particulate element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Low temperature -40°C (-40°F) with combined manual / semi-auto drain as standard



Manual drain

Auto drain

| Port Size | Description | Part Number |
|---|---|---|
| 3/4" | Combined Manual /Semi-Auto Drain | **P3YFA96ESCN** |
| 3/4" | Auto Drain | **P3YFA96ESAN** |
| 1" | Combined Manual /Semi Auto Drain | **P3YFA98ESCN** |
| 1" | Auto Drain | **P3YFA98ESAN** |

## Operating information

| | | |
|---|---|---|
| Supply pressure (max)*: | | 254 psig (17.5 bar) |
| Operating temperature: | | |
| Auto drain | | 14°F to 140°F (-10°C to 60°C) |
| Combined drain | | -40°F to 140°F (-40°C to 60°C) |
| Standard filtration | | 5 micron |
| Manual / semi-auto drain: | | Closed at 11.6 psig (0.8 bar) G1/8 thread male |
| Auto drain bowl pressure: | | Closed at 11.6 psig (0.8 bar) |

## P3Y Coalescing Filter

- Extended high efficiency filter element provides greater filtration surface area.
- Integral 3/4" or 1" ports (BSPP & NPT)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Adsorber activated carbon element removes oil vapors and most hydrocarbons
- Robust but lightweight aluminum construction

**Notes:** To optimize the life of the coalescing element, it is advisable to install a P3YFA pre-filter with a 5 micron element upstream of the coalescing filter.

To optimize the life of the adsorber element, it is advisable to install a P3Y coalescing 0.01 micron filter upstream of the adsorber filter.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

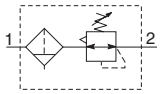
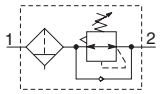
## P3Y Filter / Regulator

- Integral 3/4" or 1" ports (BSPP or NPT)
- High efficiency element as standard
- Excellent water removal efficiency
- Robust but lightweight aluminium construction
- Secondary pressure ranges 12 and 16 bar
- Rolling diaphragm for extended life
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation.
- Reverse flow / relieving option
- Low temperature -40°C (-40°F) with combined manual / semi-auto drain as standard





| Port Size | Description (0 To 174 Psi) | Part Number |
|---|---|---|
| 3/4" | Relieving, Combined Manual / Semi-Auto Drain | **P3YEA96ESCBNEN** |
| 3/4" | Relieving, Auto Drain | **P3YEA96ESABNEN** |
| 3/4" | Relieving, Gauge, Combined Manual / Semi-Auto Drain | **P3YEA96ESCBNFN** |
| 3/4" | Relieving, Gauge, Auto Drain | **P3YEA96ESABNFN** |
| 1" | Relieving, Combined Manual / Semi-Auto Drain | **P3YEA98ESCBNEN** |
| 1" | Relieving, Auto Drain | **P3YEA98ESABNEN** |
| 1" | Relieving, Gauge, Combined Manual / Semi-Auto Drain | **P3YEA98ESCBNFN** |
| 1" | Relieving, Gauge, Auto Drain | **P3YEA98ESABNFN** |

### Operating information

| | | |
|---|---|---|
| Supply pressure (max)*: | | 254 psig (17.5 bar) |
| Operating temperature: | | |
| Auto drain | | 14°F to 140°F (-10°C to 60°C) |
| Combined drain | | -40°F to 140°F (-40°C to 60°C) |
| Standard filtration: | | 5 micron |
| Manual / semi-auto drain: | | Closed at 11.6 psig (0.8 bar) G1/8 thread male |
| Auto drain bowl pressure: | | Closed at 11.6 psig (0.8 bar) |
| Bowl capacity: | | 4.4 US oz. (130 $cm^3$) |
| Standard filtration: | | 5 micron |
| Flow capacity†: | 3/4" | 335 scfm (158.1 $dm^3/s$, ANR) |
| | 1" | 465 scfm (219.5 $dm^3/s$, ANR) |
| Fluid: | | Compressed air |
| Gauge port (x2): | | 1/4" |
| Weight: | | 3.3 lb (1.5 kg) |

† Inlet pressure 91.4 psig (6.3 bar) inlet pressure and 7.3 psig (0.5 bar) pressure drop.

* Air supply must be dry enough to avoid ice formation at temperatures below 35.6°F (2°C).

**Air quality**:
Within ISO 8573-1: 1991 Class 3 and 5 (Particulates)
Within ISO 8573-1: 2001 Class 6 and 7 (Particulates)

| Panel mount nut | **P3YKA00MM** |

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

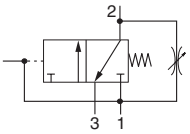
# P3Y Combined Soft Start / Dump Valve

- Modular design with 3/4" & 1" integral ports (BSPP or NPT)
- Provides for the safe introduction of pressure
- Automatically dumps downstream pressure on the loss of pilot signal
- Adjustable slow start
- Solenoid or air pilot options
- High flow & exhaust capability

P3Y Series Combined Soft Start / Dump Valves, provide for the safe introduction of pressure to machines or systems. Soft Start / Dump Valves when set, allow the pressure to gradually build to the set point before fully opening to deliver full flow at line pressure.

The controlled introduction of pressure can be an important safety factor and prevent damage to tooling when air pressure is introduced at machine or system start up.



| Port Size | Description | Part Number |
|---|---|---|
| 3/4" | Air Pilot Operated | **P3YTA96PPN** |
| 3/4" | 24VDC 30mm Coil | **P3YTA96SCNA2CN** |
| 1" | Air Pilot Operated | **P3YTA98PPN** |

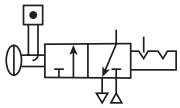
# P3Y Modular Ball Valve

- Positive bubble tight shut-off
- 90° turn handle to prevent unauthorized adjustment
- Pad lockable (up to 6 times)
- When the inlet pressure is turned off the downstream vents through the exhaust port



Ball / Lockout Valve shuts off downstream line pressure in the closed position with a 90° turn of the handle. In the closed position, inlet air pressure is blocked and downstream / system air is exhausted through a threaded port. To prevent unauthorized adjustment, the padlock slide may be assembled on either side. It is recommended that this slide is installed after final system assembly.

The Safety Lockout valves conform to OSHA #29 CFR part 1910 – control of hazardous energy source (lockout / tagout).

## Operating information

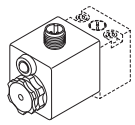
### Solenoid Coils with M12 Connection



| Voltage | Part Number | Weight (Kg) |
|---|---|---|
| Direct current | | |
| 24VDC | **P2FC6449** | 0.065 |

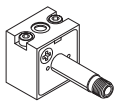
### Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavorable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the Maximum life of relays in the circuit (and particularly of transistors, thyristors and integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All connectors/cable plugs EN175301-803 with LED's include this type of circuit protection.

### Materials

| **Pilot Valve** | |
|---|---|
| Body: | Polyamide |
| Armature tube: | Brass |
| Plunger & core: | Corrosion resistant Cr-Ni steel |
| Seals: | Fluorocarbon |
| Screws: | Stainless steel |
| **Coil** | |
| Encapsulation material: | Thermoplastic as standard<br>Duroplast for M12 connection |

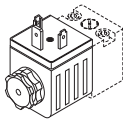
### Spare Base Solenoid Pilot Operator CNOMO NC



| Description | Part Number | Weight (Kg) |
|---|---|---|
| Non-lock Manual Override | **P2FP23N4B** | 0.065 |
| No Override | **P2FP23N4A** | 0.065 |

**Note:** Solenoid pilot operators are fitted to the Global range. Order the above part numbers for spares. The operators are supplied with mounting screws and interface 'O' rings. Coils and connectors must be ordered separately.

### Solenoid Coils with DIN A or Industrial B Connection



| Voltage | 22mm x 30mm Part Number B Industrial Standard | Weight (Kg) | 30mm x 30mm Part Number DIN 43650A Standard | Weight (Kg) |

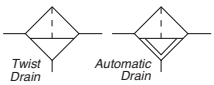
# 14F Particulate Filters – Miniature

- Excellent water removal efficiency
- Unique deflector plate that creates swirling of the air stream ensuring maximum water and dirt separation
- Easily disassembled for servicing without the use of tools
- 5 micron element standard
- Interchangeable twist and automatic pulse drains
- 1/8" & 1/4" ports (NPT, BSPP & BSPT)



| Port Size | Description ‡ | Part Number |
|---|---|---|
| 1/8" | Poly Bowl, Twist Drain | **14F01BB** |
| 1/8" | Metal Bowl, Twist Drain | **14F03BB** |
| 1/8" | Poly Bowl, Auto Pulse Drain | **14F05BB** |
| 1/8" | Metal Bowl, Auto Pulse Drain | **14F07BB** |
| 1/4" | Poly Bowl, Twist Drain | **14F11BB** |
| 1/4" | Metal Bowl, Twist Drain | **14F13BB** |
| 1/4" | Poly Bowl, Auto Pulse Drain | **14F15BB** |
| 1/4" | Metal Bowl, Auto Pulse Drain | **14F17BB** |

‡ For polycarbonate bowl, see caution in Engineering Section A.

## Operating information

| | | |
|---|---|---|
| Supply pressure (max): | | |
| Plastic bowl | | 0 to 150 psig (0 to 10.3 bar) |
| Metal bowl | | 0 to 250 psig (0 to 17.2 bar) |
| Auto pulse drain | | 10 to 250 psig (0.7 to 17.2 bar) |
| Operating temperature: | | |
| Plastic bowl | | 32°F to 125°F (0°C to 52°C) |
| Metal bowl | | 32°F to 175°F (0°C to 80°C) |
| Auto pulse drain | | 125°F (52°C) or less |
| Flow capacity†: | | |
| High flow | 1/8" | 22 scfm (10.4 $dm^3/s$, ANR) |
| | 1/4" | 24 scfm (11.3 $dm^3/s$, ANR) |
| Bowl capacity: | | 1 oz. |
| Auto pulse drain tube barb | | 1/8 inch |
| Weight: | | 0.41 lb (0.18 kg) |

† scfm = Standard cubic feet per minute at 90 psig inlet and 5 psig pressure drop.

# 10F Coalescing Filters – Miniature

- Removes liquid aerosols and sub-micron particles.
- Liquids gravitate to the bottom of the element and will not re-enter the airstream.
- Oil free air for critical applications, such as air gauging and pneumatic instrumentation and controls.
- Interchangeable twist and automatic pulse drains.
- Grade 6 element, 99.97% DOP efficiency
- 1/8", 1/4" ports (NPT, BSPP, BSPT)

| Port Size | Description ‡ | Part Number |

## Flow Charts

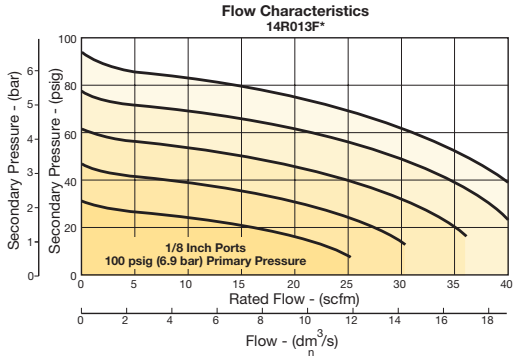
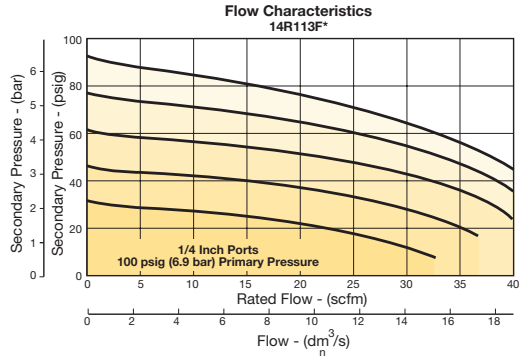
### 14R 1/8" Ports



### 14R 1/4" Ports



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**Options**

| | |
|---|---|
| Blank | No Options |
| L† | Preset Non-Adjustable |
| P† | Preset Adjustable |
| S† | Pressure Limiter Max. Adjustable |
| T† | Pressure Limiter Max. Non-Adjustable |

† Inlet pressure is 100 psig. For other pressures contact factory.

**Preset / Pressure Limited**

| | |
|---|---|
| Blank | None |
| XXX* | Preset Pressure |
| XXX* | Pressure Limited |

* Available preset / pressure limited range, 10 to 90 psig in 5 psig increments. For higher pressures, contact factory.

(Example: 065 = 65 psig)

Spring Type by Preset / Limited Pressure:
For Preset / Limited Pressure 10 to 25 use 30 psi spring
For Preset / Limited Pressure 26 to 50 use 60 psi spring
For Preset / Limited Pressure 51 to 90 use 125 psi spring

| 2- 125 psig spring (gold) | **P01173** |

***Tighten panel mount nut 2.8 to 3.4 Nm (25 to 30 in-lbs) of torque.**

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

# 04L Mist Lubricators – Miniature

- Proportional oil delivery over a wide range of air flows
- Precision needle valve assures repeatable oil delivery and provides simple adjustment of delivery rate
- Ideal for low and high flow applications with changing air flow
- Transparent sight dome for 360° visibility
- Integral 1/8", 1/4" ports (NPT, BSPP, BSPT)

| Port Size | Description ‡ | Part Number |
|---|---|---|
| 1/8" | Poly Bowl, No Drain | **04L00GB** |
| 1/8" | Metal Bowl, No Sight Gauge, Twist Drain | **04L03GB** |
| 1/4" | Poly Bowl, No Drain | **04L10GB** |
| 1/4" | Metal Bowl, No Sight Gauge, Twist Drain | **04L13GB** |

‡ For polycarbonate bowl and sight dome, see caution in Engineering Section A.

## Operating information

| | | |

# 15F Coalescing Filters – Economy

- Removes liquid aerosols and sub-micron particles.
- Liquids gravitate to the bottom of the element and will not re-enter the airstream.
- Oil free air for critical applications, such as air gauging and pneumatic instrumentation and controls.
- Interchangeable twist and automatic pulse drains.
- Differential pressure indicator standard.
- 1/4" & 3/8" ports – (NPT)

## Flow Charts

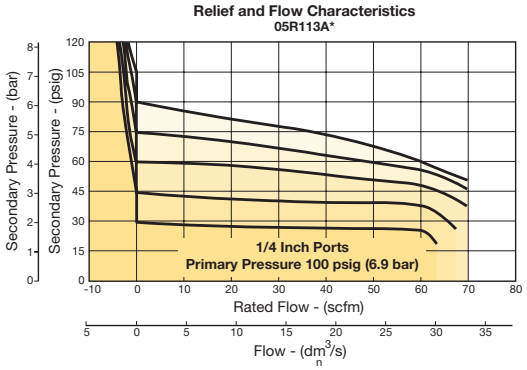
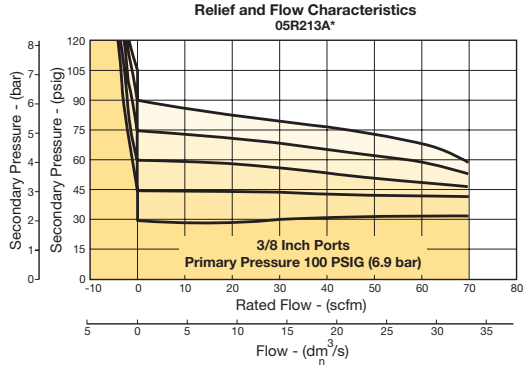
### 05R 1/4" Regulator



### 05R 3/8" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

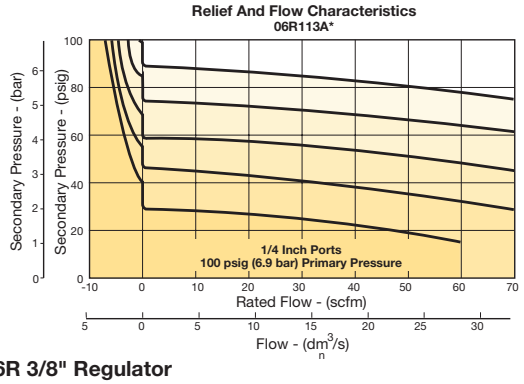
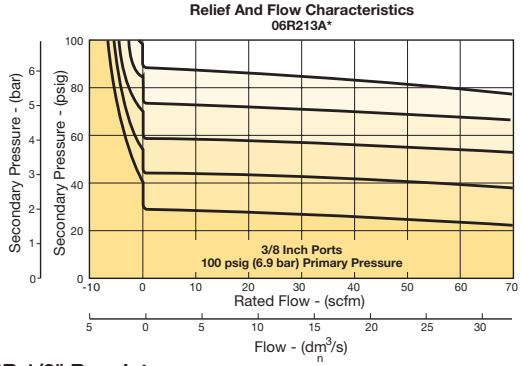
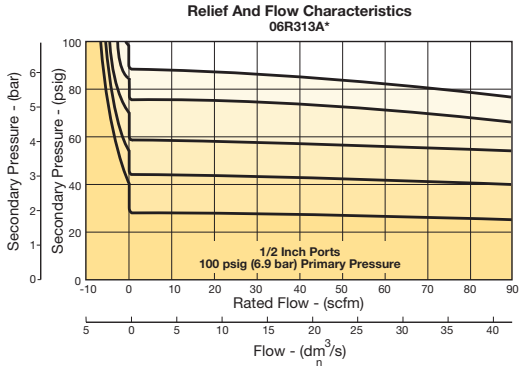
### 06R 1/4" Regulator



### 06R 3/8" Regulator



### 06R 1/2" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

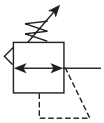
## 07R Regulators – Standard

- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Rolling diaphragm for extended life
- Two high flow 1/4" gauge ports can be used as additional outlets
- Easily serviced
- Removable non-rising knob for panel mounting and tamper resistance
- 1/2", 3/4" ports (NPT)



### Operating information

| | | |
|---|---|---|
| Supply pressure (max): | | 250 psig (17.2 bar) |
| Secondary pressure ranges: | | |
| Standard | | 2 to 125 psig (0 to 8.6 bar) |
| Low | | 1 to 60 psig (0 to 4.1 bar) |
| High | | 5 to 250 psig (0.4 to 17.2 bar) |
| Operating temperature: | | 32°F to 175°F (0°C to 80°C) |
| Low temperature | | -4°F to 125°F (-20°C to 52°C) |
| Flow capacity†: | | |
| High flow | 1/2" | 90 scfm (42.5 $dm^3/s$, ANR) |
| | 3/4" | 90 scfm (42.5 $dm^3/s$, ANR) |
| Gauge ports (2): | | 1/4 inch (can be used as additional full flow 1/4 inch outlet ports) |
| Weight: | | 2.5 lb (1.1 kg) |

† scfm = Standard cubic feet per minute at 100 psig inlet, 90 psig no flow secondary setting and 10 psig pressure drop.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## Flow Charts

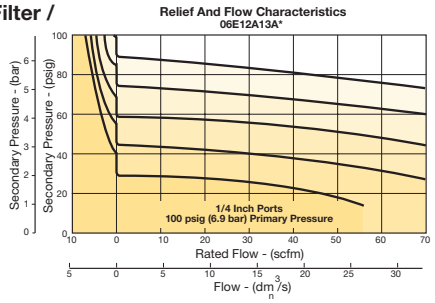
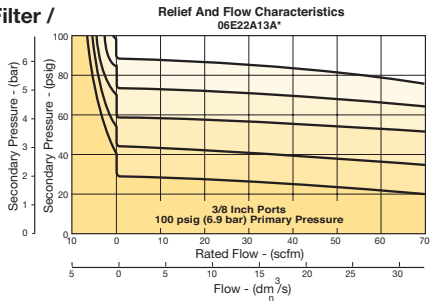
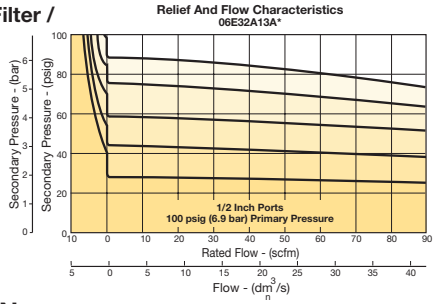
**06E 1/4" Filter / Regulator**



**06E 3/8" Filter / Regulator**



**06E 1/2" Filter / Regulator**



## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

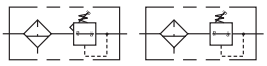
# 07E Filter / Regulator – Standard

- Space saving package offers both filter and regulator features for optimal performance
- Excellent water removal efficiency
- Rolling diaphragm for extended life
- Quick response, and accurate pressure regulation regardless of changing flow or inlet pressure
- Two high flow 1/4" gauge ports can be used as additional outlets
- Shown with recommended metal bowl guard
- 1/2", 3/4" ports (NPT)



## Operating information

| | | |
|---|---|---|
| Supply pressure (max): | | |
| Plastic bowl | | 0 to 150 psig (0 to 10.3 bar) |
| Metal bowl | | 0 to 250 psig (0 to 17.2 bar) |
| Auto float drain | | 15 to 250 psig (1.0 to 17.2 bar) |
| Operating temperature: | | |
| Plastic bowl | | 32°F to 125°F (0°C to 52°C) |
| Metal bowl | | 32°F to 175°F (0°C to 80°C) |
| Secondary pressure range: | | |
| Standard | | 2 to 125 psig (0 to 8.6 bar) |
| Low | | 1 to 60 psig (0 to 4.1 bar) |
| High | | 5 to 250 psig (0.4 to 17.2 bar) |
| Flow capacity†: | | |
| High flow | 1/2" | 90 scfm (42.5 $dm^3/s$, ANR) |
| | 3/4" | 90 scfm (42.5 $dm^3/s$, ANR) |
| Bowl capacity: | | 7.2 oz. |
| Gauge ports (2): | | 1/4 inch (can be used as additional full flow 1/4" outlet ports) |
| Sump capacity: | | 2.8 oz. |
| Weight: | | 2.5 lb (1.1 kg) |

† scfm = Standard cubic feet per minute at 100 psig inlet, 90 psig no flow secondary setting and 10 psig pressure drop.

# 15L Micro-Mist Lubricators – Economy

- Proportional oil delivery over a wide range of air flows
- Generates oil particles of 5 micron or smaller downstream to lubricate systems having complex piping arrangements
- Precision needle valve assures repeatable oil delivery and provides simple adjustment of delivery rate
- Ideal for low and high flow applications with changing air flow
- Transparent sight dome for 360° visibility
- Removable drip control knob for tamper resistance
- Integral 3/8" (NPT)

# 16L Micro-Mist Lubricators – Compact

- Proportional oil delivery over a wide range of air flows
- Generates oil particles of 5 micron or smaller downstream to lubricate systems having complex piping arrangements
- Precision needle valve assures repeatable oil delivery and provides simple adjustment of delivery rate
- Ideal for low and high flow applications with changing air flow
- Transparent sight dome for 360° visibility
- Yellow fill cap identifies micro-mist lubricator
- Integral 1/4", 3/8", 1/2" (NPT)

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

**CAUTION:**

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

### CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

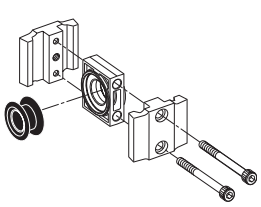
| Lockout valves, (07 series) | **PS856P** |
| Modular manifold block 3/8" port, (06 series) | **PS757P** |
| Modular manifold block 1/2" port, (07 series) | **PS857P** |

## Body Connectors

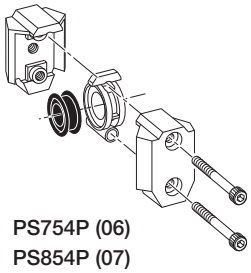
Body connectors allow you to easily assemble and disassemble modular combinations.

Body connectors are required whenever you assemble two or more pieces together.

Each kit includes one set.



PS954P (05)

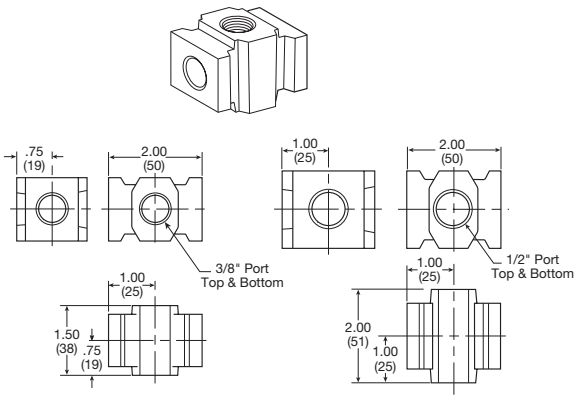


PS754P (06)
PS854P (07)

## Modular Manifold Block

A modular manifold block can be used between any two modular units to give additional outlet ports. The manifold block provides 2 additional outlets in 3/8" and 1/2" sizes. Any standard pipe plug can be used to close off unused ports.

**NOTE: Body connectors are not supplied with manifold blocks.**



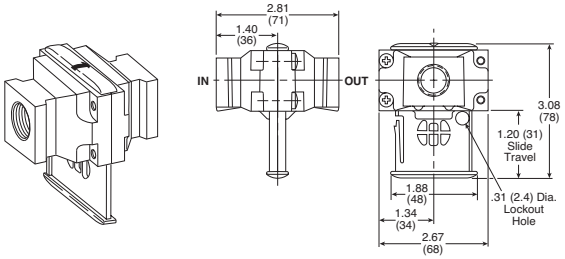
PS757P (06)

PS857P (07)

## Lockout Valves

Lockout Valves provide positive shut-off and exhaust capability to isolate Modular units so they can be easily removed from the line and can be locked in a closed position. Center position can be used as a slow start. Accepts #3 padlock.

**NOTE: Body connectors are not supplied with lockout valves.**



## Wall Mounting Kits

Wall mounting kits are available for mounting your modular assemblies and can be assembled and used with any standard body connector set.

Since modular combinations are always identical in size, you can predrill for wall mounting on your equipment.

Kit includes 1 assembly.

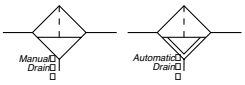
# PF504 Particulate Filters – Miniature

- Stainless steel construction handles most corrosive environments
- Fluorocarbon seals standard
- Meets NACE specifications MR-01-75/ISO 15156
- 1/8" female threaded drain
- 1/4" port (NPT, BSPP)



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Twist Drain, NPT | **PF504-02DHSS** |
| 1/4" | Auto Pulse Drain, NPT | **PF504-02DHRSS** |

## Operating information

| | |
|---|---|
| Operating pressure: | |
| Twist drain | 0 to 300 psig (0 to 20.7 bar) |
| Auto pulse drain | 10 to 175 psig (0 to 12 bar) |
| Operating temperature: | |
| Twist drain | 0°F to 180°F (-18°C to 82°C) |
| Auto pulse drain | 32°F to 150°F (0°C to 66°C) |
| Flow capacity†: | 23 scfm (10.9 $dm^3/s$, ANR) |
| Bowl capacity: | 1.0 oz. |
| Filter rating: | 20 micron |
| Sump capacity: | 0.4 oz. |
| Weight: | 0.6 lb (0.27 kg) |

**Note: Air must be dry enough to avoid ice formation at temperatures below 32°F (0°C)**

† scfm = Standard cubic feet per minute at 90 psig inlet and 5 psig pressure drop.

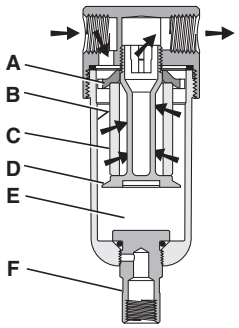
## Operation



**First Stage Filtration:**

Air enters at inlet port and flows through deflector plate **(A)** which causes a swirling action. Liquids and coarse particles are forced to the bowl interior wall **(B)** by the centrifugal action of the swirling air. They are then carried down the bowl wall by the force of gravity. The baffle **(D)** separates the lower portion of the bowl into a "quiet zone" **(E)** where the removed liquid and particles collect, unaffected by the swirling air, and are therefore not reentrained into the flowing air.

**Second Stage Filtration:**

After liquids and large particles are removed in the first stages of filtration, the air flows through element **(C)** where smaller particles are filtered out. The filtered air then passes downstream. Collected liquids and particles in the "quiet zone" **(E)** should be drained before their level reaches a height where they would be reentrained in the flowing air. This can be accomplished by unscrewing the drain valve **(F)** slightly until the liquid begins to drain.

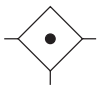
# PF501 Coalescing Filters – Miniature

- Stainless steel construction handles most corrosive environments
- Meets NACE specifications MR-01-75/ISO 15156
- 1/8" female threaded drain
- 1/4" port (NPT, BSPP)



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Twist Drain, NPT | **PF501-02DHSS** |
| 1/4" | Auto Pulse Drain, NPT | **PF501-02DHRSS** |

## Operating information

| | |
|---|---|
| Operating pressure: | |
| Twist drain | 0 to 300 psig (0 to 20.7 bar) |
| Auto pulse drain | 10 to 175 psig (0 to 12 bar) |
| Operating temperature: | |
| Twist drain | 0°F to 180°F (-18°C to 82°C) |
| Auto pulse drain | 32°F to 150°F (0°C to 66°C) |
| Flow capacity†: | 16 scfm (7.6 $dm^3/s$, ANR) |
| Bowl capacity: | 1.0 oz. |
| Filter rating: | 0.01 micron |
| Sump capacity: | 0.4 oz. |
| Weight: | 0.6 lb (0.27 kg) |

**Note: Air must be dry enough to avoid ice formation at temperatures below 32°F (0°C)**

† scfm = Standard cubic feet per minute at 90 psig inlet and 5 psig pressure drop.

## Ordering Information:

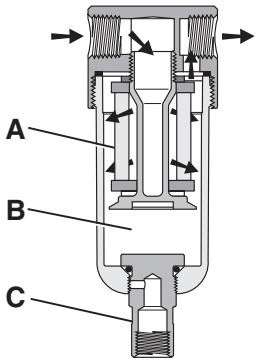
www.parker.com/pneumatics

## Operation



The contaminated air enters the element interior and is forced through a thick membrane **(A)** of "borosilicate" glass fibers coated with epoxy. Flow then passes through the element, and at this stage 99.97% of the sub micronic particles have been removed from the air stream. The tiny droplets coalesce together and are collected from the filter element by the outer drain layer.

The clean, filtered air now passes through and out into the pneumatic system. The air line coalescing filter removes liquid aerosols and sub-micron particulate matter.

Collected liquids and particles in the "quiet zone" **(B)** should be drained before their level reaches a height where they would be reentrained in the flowing air. This can be accomplished by unscrewing the drain valve **(C)** slightly until the liquid begins to drain.

## Operation

With the adjusting knob **(A)** turned fully counter-clockwise (no spring load), and pressure supplied to the regulator inlet port, the valve poppet assembly **(B)** is closed. Turning the adjusting knob clockwise applies a load to control spring **(C)**. This load causes the diaphragm **(D)** and the valve poppet assembly **(B)** to move downward allowing flow across the seat area **(E)** created between the poppet assembly and the seat. Pressure in the downstream line is sensed below the diaphragm **(D)** and offsets the load of spring **(C)**. As downstream pressure rises, poppet assembly **(B)** and diaphragm **(D)** move upward until the area **(E)** is closed and the load of the spring **(C)** and pressure under diaphragm **(D)** are in balance. A reduced outlet pressure has now been obtained, depending on spring load. Creating a demand downstream, such as opening a valve, results in a reduced pressure under the diaphragm **(D)**. The load of control spring **(C)** now causes the poppet assembly to move downward opening seat area **(E)** allowing air to flow to meet the downstream demand. The flow of downstream air is metered by the amount of opening **(E)**.

Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the diaphragm **(D)** to move upward against control spring **(C)**, open vent hole **(F)**, and vent the excess pressure to atmosphere through the hole in the bonnet **(H)**. (This occurs in the relieving type regulator only.)

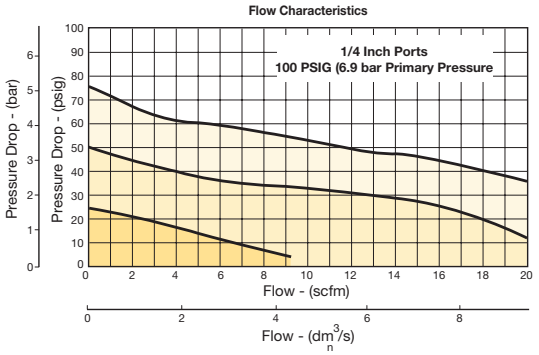
### PR354, PR364 1/4" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## Operation

Turning the adjusting knob **(A)** clockwise applies a load to control spring **(B)** which forces diaphragm **(C)** and valve poppet assembly **(D)** to move downward allowing filtered air to flow through the seat area **(E)** created between the poppet assembly and the seat. **"First stage filtration"**. Air pressure supplied to the inlet port is directed through deflector plate **(F)** causing a swirling centrifugal action forcing liquids and coarse particles to the inner bowl wall **(G)** and down below the lower baffle **(H)** to the quiet zone. After liquids and large particles are removed in the first stage of filtration **"second stage filtration"** occurs as air flows through element **(J)** where smaller particles are filtered out and retained. The air flow now passes through seat area **(E)** to the outlet port of the unit. Pressure in the downstream line is sensed below the diaphragm **(C)** and offsets the load of spring **(B)**. When downstream pressure reaches the set-point, poppet valve assembly **(D)** and diaphragm **(C)** move upward closing seat area **(E)**. Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the diaphragm **(C)** to move upward opening vent hole **(K)** venting the excess pressure to atmosphere through the hole in the bonnet **(L)**. (This occurs in the standard relieving type filter/regulators only.)

# PB11, PB12 Filter / Regulator – Standard

- Stainless steel construction handles most corrosive environments
- Large diaphragm to valve area ratio for precise regulation and high flow capacity
- 1/8" female threaded drain
- Meets NACE specifications MR-01-75/ISO-15156
- Low temperature version available
- 1/2" port (NPT, BSPP)

**PB11** **PB12**

| Port Size | Description | Part Number |
|---|---|---|
| With Sight Gauge, NPT | | |
| 1/2" | Standard Knob, Twist Drain | **PB11-04WJCSS** |
| 1/2" | Standard Knob, Auto Float Drain | **PB11-04WJCRSS** |
| 1/2" | Stainless Steel T-Handle, Twist Drain | **PB12-04WJCSS** |
| 1/2" | Stainless Steel T-Handle, Auto Float Drain | **PB12-04WJCRSS** |

## Operating information

| | |
|---|---|
| Operating pressure: | |
| PB11, PB12 | 300 psig (20.7 bar) |
| Auto float drain | 15 to 175 psig (1 to 12 bar) |
| Operating temperature: | |
| PB11 | 0°F to 150°F (-18°C to 66°C) |
| PB12, no sight gauge | 0°F to 180°F (-18°C to 82°C) |
| PB12, sight gauge | 0°F to 150°F (-18°C to 66°C) |
| Auto float drain | 32°F to 150°F (0°C to 66°C) |
| Flow capacity†: | 72 scfm (34 $dm^3/s$, ANR) |
| Bowl capacity: | 4.0 oz. |
| Filter rating: | 40 micron |
| Sump capacity: | 1.7 oz. |
| Gauge port: | 1/4 inch |
| Operation: | Fluorocarbon diaphragm |
| Weight: | 2.42 lb (1.09 kg) |

**Note: Air must be dry enough to avoid ice formation at temperatures below 32°F (0°C)**

† scfm = Standard cubic feet per minute at 100 psig inlet, 75 psig no flow secondary setting and 15 psig pressure drop.

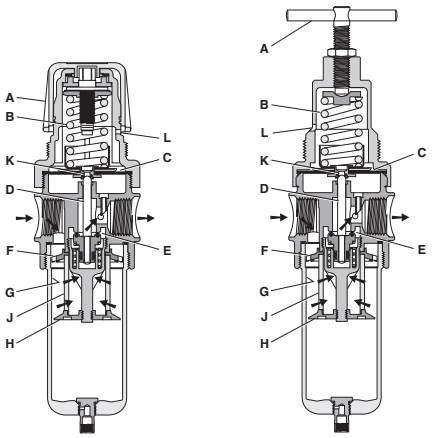
## Operation



Turning the adjusting knob / T-Handle **(A)** clockwise applies a load to control spring **(B)** which forces diaphragm **(C)** and valve poppet assembly **(D)** to move downward allowing filtered air to flow through the seat area **(E)** created between the poppet assembly and the seat. **"First stage filtration"**. Air pressure supplied to the inlet port is directed through deflector plate **(F)** causing a swirling centrifugal action forcing liquids and coarse particles to the inner bowl wall **(G)** and down below the lower baffle (H) to the quiet zone. After liquids and large particles are removed in the first stage of filtration **"second stage filtration"** occurs as air flows through element **(J)** where smaller particles are filtered out and retained. The air flow now passes through seat area **(E)** to the outlet port of the unit. Pressure in the downstream line is sensed below the diaphragm **(C)** and offsets the load of spring **(B)**. When downstream pressure reaches the set-point, poppet valve assembly **(D)** and diaphragm **(C)** move upward closing seat area **(E)**. Should downstream pressure exceed the desired regulated pressure, the excess pressure will cause the diaphragm **(C)** to move upward opening vent hole **(K)** venting the excess pressure to atmosphere through the hole in the bonnet **(L)**. (This occurs in the standard relieving type filter/regulators only.)

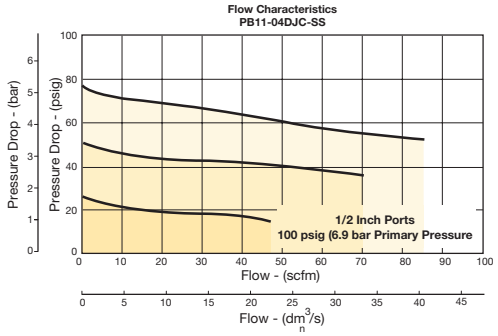
## Flow Charts

### PB11 1/2" Filter / Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

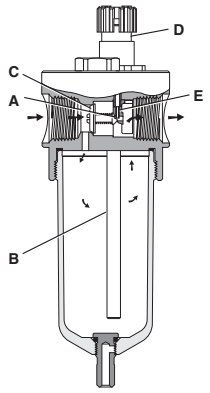
## Operation



Air flowing through the unit goes through two paths. At low flow rates the majority of the air flows through the Venturi section **(A)**. The rest of the air opens the check valve **(C)**. The velocity of the air flowing through the Venturi section **(A)** creates a pressure drop. This lower pressure allows the oil to be forced from the reservoir through the pickup tube **(B)** and travels up to the metering screw **(D)**. The rate of oil delivery is then controlled by adjusting the metering screw **(D)**. Oil flows past the metering screw **(D)** and forms a drop in the nozzle tube **(E)**. As the oil drops through the dome **(F)** and back into the Venturi section **(A)**, it is broken up into fine particles. It is then mixed with the air flowing past the check valve **(C)** and is carried downstream. As the air flow increases the check valve **(C)** will open more fully. This additional flow will assure that the oil delivery rate will increase linearly with the increase of air flow.

Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

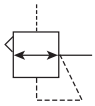
## P3NR Pilot Controlled Regulator - Hi-Flow

- Port blocks (PB) available to provide 1-1/2" port extension to 1" ported bodies
- Self relieving feature plus balanced poppet provides quick response and accurate pressure regulation
- Solid control piston for extended life
- 3/4", 1" 1-1/2" ports (NPT, BSPP)



| Port Size | Description | Part Number |
|---|---|---|
| 3/4" | Without Gauge | **P3NRA96BPP** |
| 1" | Without Gauge | **P3NRA98BPP** |
| 1-1/2"# | Without Gauge | **P3NRA9PBPP** |

# 1" port body with 1-1/2" port block.

### Operating information

| | | |
|---|---|---|
| Supply pressure (max): | | 250 psig (17.2 bar) |
| Operating temperature: | | 32°F to 175°F (0°C to 80°C) |
| Flow capacity†: | | |
| High flow | 3/4" | 300 scfm (141.6 $dm^3/s$, ANR) |
| | 1" | 300 scfm (141.6 $dm^3/s$, ANR) |
| | 1-1/2" | 350 scfm (165.2 $dm^3/s$, ANR) |
| Gauge ports (2): | | 1/4 inch |
| Weight: | 3/4", 1" | 3.3 lb (1.5 kg) |
| | 1-1/2" # | 4.4 lb (2.0 kg) |

† scfm = Standard cubic feet per minute at 100 psig inlet, 90 psig no flow secondary setting and 10 psig pressure drop.

# F602 Particulate Filters – Hi-Flow

- Excellent water removal efficiency
- For heavy duty applications with minimum pressure drop requirement
- Unique deflector plate that creates swirling of the air stream ensuring maximum water and dirt separation
- Large filter element surface guarantees low pressure drop and increased element life
- 40 micron filter element standard, 5 micron available
- Metal bowl with sight gauge standard
- Twist drain as standard, optional auto drain
- 3/4" & 1" port, NPT & BSPP

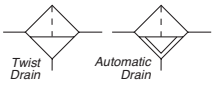
# F602 Particulate Filters – Hi-Flow

- Excellent water removal efficiency
- For heavy duty applications with minimum pressure drop requirement
- Unique deflector plate that creates swirling of the air stream ensuring maximum water and dirt separation
- Large filter element surface guarantees low pressure drop and increased element life
- 40 micron filter element standard, 5 micron available
- Metal bowl with sight gauge standard
- Twist drain as standard, optional auto drain
- Large bowl capacity
- Optional high capacity bowl(s) available
- 1-1/2" port, NPT & BSPP



| Port Size | Description | Part Number |
|---|---|---|
| 1-1/2" | 16 oz. Metal Bowl / Manual Drain | **F602-12WJ** |

# F701 Coalescing Filters – Hi-Flow

- Removes liquid aerosols and sub-micron particles.
- Protects pneumatic systems from contamination that standard particulate filters will not catch.
- Two different grade elements available.
- Differential pressure indicator (pop-up ) standard.
- Differential pressure gauge optional.
- High flow design
- 3/4", 1" ports (NPT, BSPP)

Note: All coalescing filters should be protected by a particulate filter (i.e., F602, or other) installed upstream.

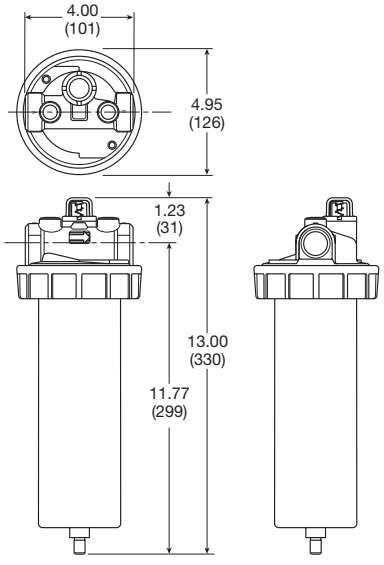
| | | | Media dry | Media Wet with 10-20 wt. oil |
| 6 | 99.97% | 0.008 | 1.0 | 2-3 |
| 10 | 95% | 0.85 | 0.5 | 0.5 |

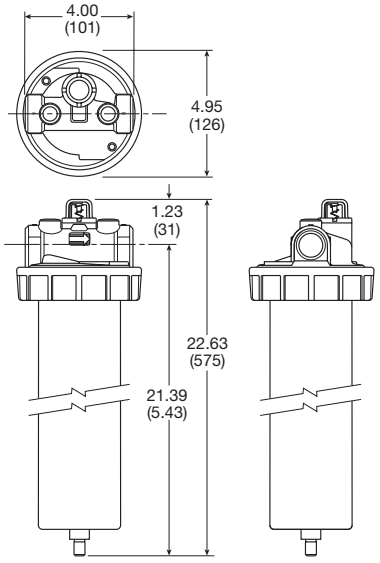
[1] Tested per BCAS 860900 at 40 ppm inlet.
[2] Add dry + wet for total pressure drop.
D.O.P. = Dioctylphthalate

### F701 - 32 oz. bowl (Hi-Flow)



Inches (mm)

### F701 - 100 oz. bowl (Hi-Flow)



# P3TF Series Flanged Coalescing Filters

- No tie rod element design
- Pleated element technology
- New high efficiency drainage layer
- Designed in accordance with ASME and CRN
- Connection sizes: 4" & 6" flange
- Acrylic polyurethane coating for corrosion protection
- Float drain is standard, shipped loose
- DP gauge is standard, installed

| Port Size | Element Type | Number Of Elements | Part Number |
|---|---|---|---|
| 4" | 0.01 micron | 4 | **P3TFAFFD2AN** |
| 4" | 1.0 micron | 4 | **P3TFAFFQ2AN** |
| 6" | 0.01 micron | 6 | **P3TFAFGD3AN** |

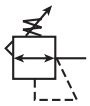
## R119 Regulators – Standard

- High flow performance featuring rugged design for the most demanding applications
- Ideal for those installations calling for constant pressure with wide variation in flow
- Diaphragm operated design with balanced poppet design for quick and accurate regulation
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Heavy duty tee handle adjustment
- Reverse flow version available
- Panel mount version available
- 1/4", 3/8", 1/2" ports (NPT, BSPP)



| Port Size | Description (0-125 psig reduced pressure) | Part Number |
|---|---|---|
| 1/4" | Without Gauge, Relieving, NPT | **R119-02C** |
| 1/4" | With Gauge, Relieving, NPT | **R119-02CG** |

For fluorocarbon repair kits, add X64 to kit number suffix.

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**R119-02C, R119-03C**

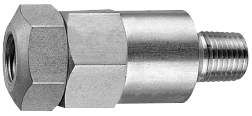
# 02F Particulate Filters – Miniature

## Application

This small, aluminum in-line filter is designed to provide protection for portable pneumatic hand tools. It weighs only 2 ounces with a throw-away filter element rated at 5 micron. Either port may be used as the inlet port. Flow is 17 scfm at 90 psig inlet pressure with 5 psig pressure drop.



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Inline Filter | **02F1BA** |

## Operating information

| | |
|---|---|
| Supply pressure (max): | 200 psig (13.8 bar) |
| Operating temperature: | 32°F to 150°F (0°C to 65.6°C) |

## Material Specifications

| | |
|---|---|
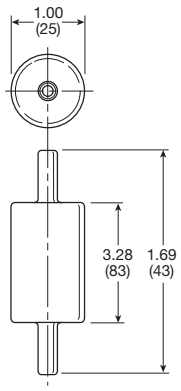
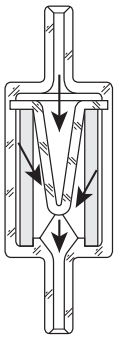
| Element | Borosilicate & Felt Glass Fibers |
| Housing | Nylon |



Inches (mm)

## Operation

The contaminated air enters the filters interior and is forced through the elements membrane of Borosilicate glass fibers. Contaminants and aerosols are collected and distributed evenly along the entire tubes length. This is accomplished by the use of the “center post” which not only provides this “drop out pocket”, but also provides a stable support.



# P31 Coalescing and Adsorber Filters – Mini

- Integral 1/4" ports (NPT, BSPP & BSPT)
- Removes liquid aerosols and sub micron particles
- Oil free air for critical applications, such as air gauging, pneumatic instrumentation and control
- Differential Pressure Indicator (DPI) standard on coalescing filters
- Positive bayonet latch to ensure correct and safe fitting
- Adsorbing activated carbon element removes oil vapors and most hydrocarbons

**Note:** **To optimize the life of coalescing element, it is advisable to install a P31F pre-filter with a 5 micron element upstream of the coalescing filter.**

**To optimize the life of an Adsorber it is advisable to install a P31 Coalescing Filter upstream of the Adsorber. Adsorber element should be replaced approximately every 1000 hours of service.**

## Flow Charts

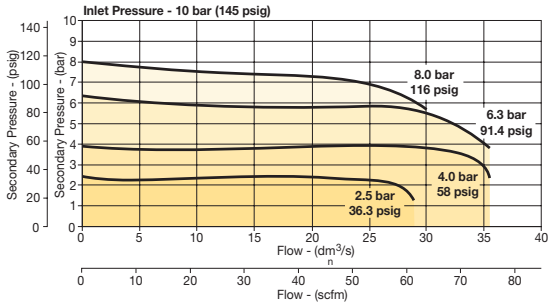
### P31 1/4 Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

# R34 Regulators – Miniature

- Diaphragm operated for fast response
- Large diaphragm to valve area ratio for precise regulation and high flow capacity
- Balanced valve design for precise regulation
- Available in 2 or 4 port design
- Available with a manifold mount to minimize plumbing
- Suitable for low temperature applications
- Non-rising adjusting knob
- 1/8", 1/4" ports (NPT, BSPP)

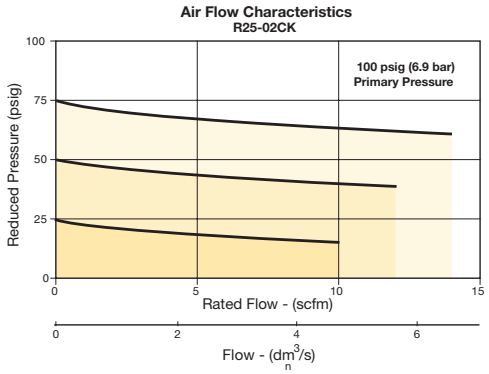
### R25 1/4" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

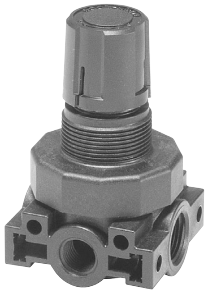
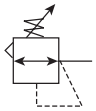
## R45 Regulators – Miniature

- Lightweight plastic body
- Unbalanced poppet standard
- Non-rising, push-to-lock adjusting knob
- Compact, 3.43 inch (87.1 mm) high by 2.06 inch (52.3 mm) wide
- Lightweight
- Diaphragm operated
- 1/4", 3/8" ports (NPT)





| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Relieving, 0-125 Reduced Pressure, without Gauge | **R45-02C** |
| 3/8" | Relieving, 0-125 Reduced Pressure, without Gauge | **R45-03C** |

**NOTE: 1.250 Dia. (31.8 mm) hole required for panel mounting.**

### Operating information

| | |
|---|---|
| Supply pressure (max): | Inlet 150 psig (10.0 bar) |
| Operating temperature: | 40°F to 125°F (4°C to 52°C) |
| Gauge ports (2): | 1/4 inch (can be used for full flow) |
| Weight: | 0.38 lb (0.17 kg) |

| 1- 60 psig spring (white) | **P01174** |
| 2- 125 psig spring (gold) | **P01173** |

***Tighten panel mount nut 2.8 to 3.4 Nm (25 to 30 in-lbs) of torque.**

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## 05E Filter / Regulator – Economy

- Space saving package offers both filter and regulator features for optimal performance
- Excellent water removal efficiency
- Rolling diaphragm for extended life
- Removable non-rising knob for tamper resistance
- Quick response, and accurate pressure regulation regardless of changing flow or inlet pressure
- 40 micron filter element standard
- 1/4", 3/8" ports (NPT)

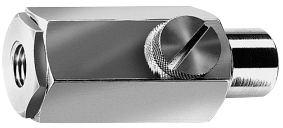
# 02L Lubricator – Miniature

- Extends the service life of air operated hand tools
- Reduces downtime of air operated equipment, saves money
- Small / lightweight
- Automatic lubrication with air tool operation
- Adjustable oil flow
- Corrosion resistant
- Full swivel outlet port
- Integral 1/4", 3/8" ports (NPT, BSPT)



## Application

In-Line Lubricators assure proper lubrication for small pneumatic hand tools. These in-line lubricators put the oil source right at the tool. Oil capacity is 1/4 oz. (1 ml), enough to last through an average 8-hour shift. This lubricator requires cyclical or intermittent airflow for proper operation, and consequently works best when installed at the tool inlet or on a short hose near the tool. The 02L cannot be filled under pressure.

## Operating information

| | | |
|---|---|---|
| Supply pressure (max): | | 200 psig (13.8 bar) |
| Operating temperature: | | 32°F to 150°F (0°C to 65.6°C) |
| Flow capacity†: | | |
| High flow | 1/4" | 29 scfm (13.6 $dm^3/s$, ANR) |
| | 3/8" | 30 scfm (14.2 $dm^3/s$, ANR) |
| Oil capacity: | | 0.25 oz. (7.4 $cm^3$) |
| Weight: | | 0.2 lb (0.1 kg) |

† scfm = Standard cubic feet per minute at 90 psig inlet and 5 psig pressure drop.

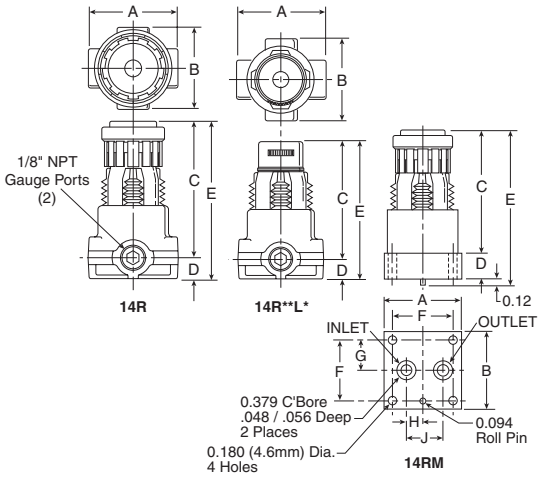
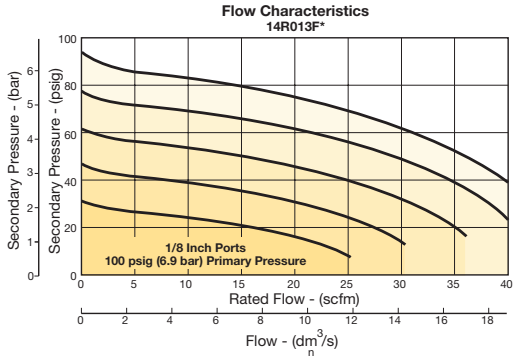
| 1-60 psig spring (white) | **P01174** |
| 2-125 psig spring (gold) | **P01173** |

* Tighten panel mount nut 2.8 to 3.4 Nm (25 to 30 in-lbs) of torque.

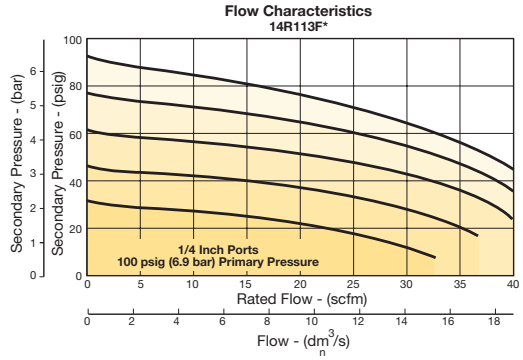


## Flow Charts

### 1/8" Ports



### 1/4" Ports



**⚠ WARNING**

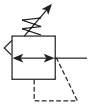
**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## P3A-R Regulators – Miniature

- Lightweight plastic body
- Non-rising adjusting knob
- Solid control piston with lip seal for extended life
- Unbalanced poppet standard
- Two full flow 1/8" gauge ports
- Reverse flow capability
- 1/8", 1/4" ports (NPT)



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Without Gauge | **P3A-RN92YNNN** |

NOTE: 1.218 Dia. (31 mm) hole required for panel mounting.

### Operating information

| | | |

For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

# R34 Regulators – Miniature

- Diaphragm operated for fast response
- Large diaphragm to valve area ratio for precise regulation and high flow capacity
- Balanced valve design for precise regulation
- Available in 2 or 4 port design
- Available with a manifold mount to minimize plumbing
- Suitable for low temperature applications
- Non-rising adjusting knob
- 1/8", 1/4" ports (NPT, BSPP)

## Flow Charts

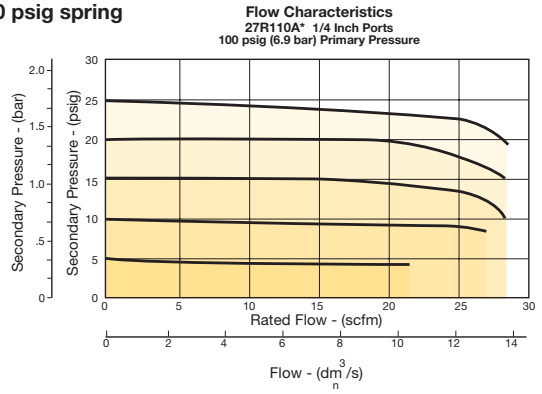
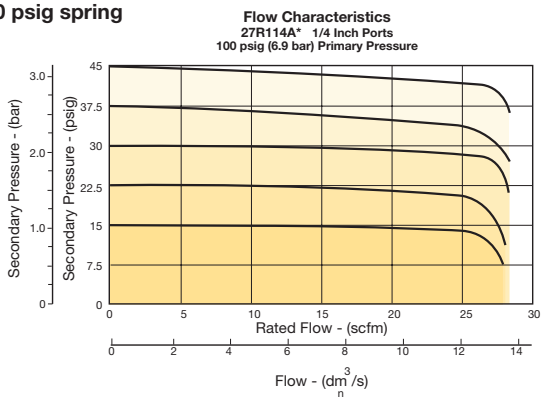
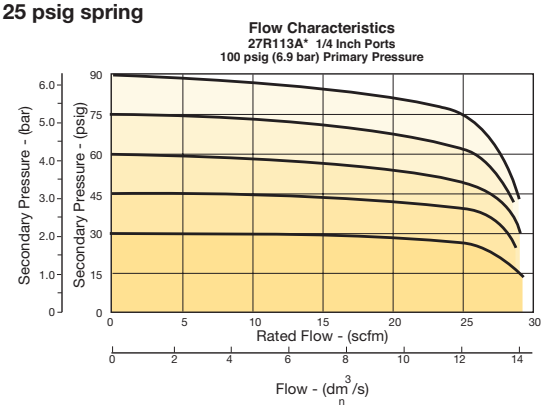
### 1/4" Regulator 30 psig spring



### 1/4" Regulator 60 psig spring



### 1/4" Regulator 125 psig spring



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

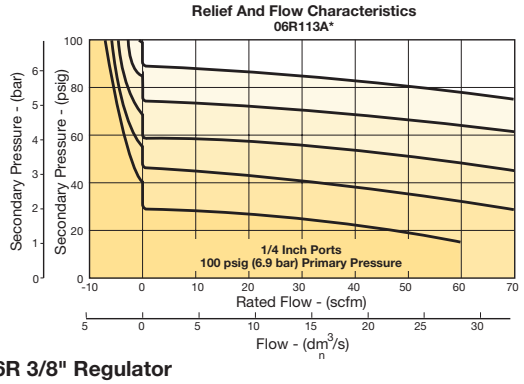
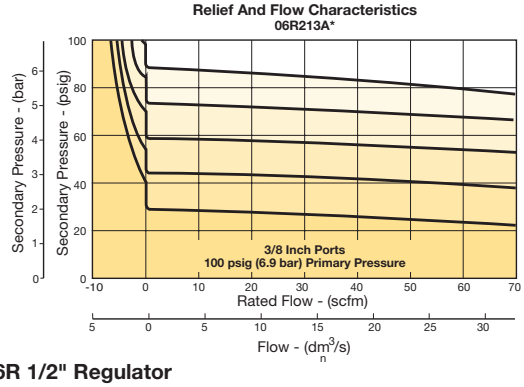
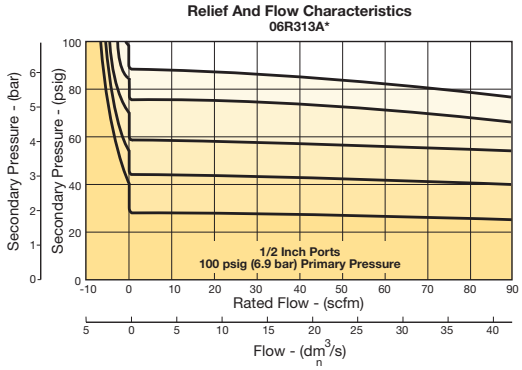
### 06R 1/4" Regulator



### 06R 3/8" Regulator



### 06R 1/2" Regulator



**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

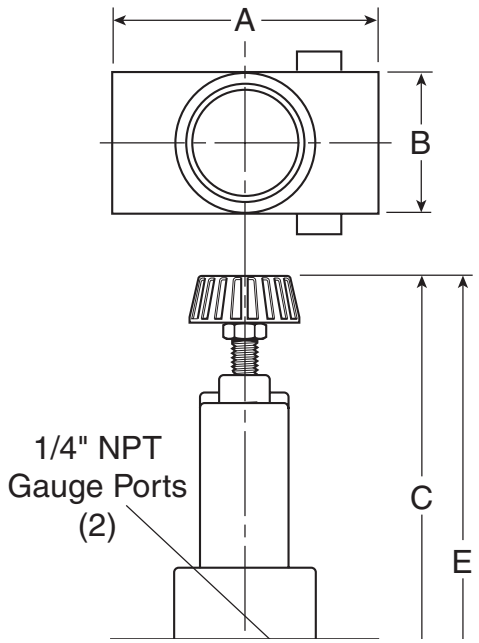
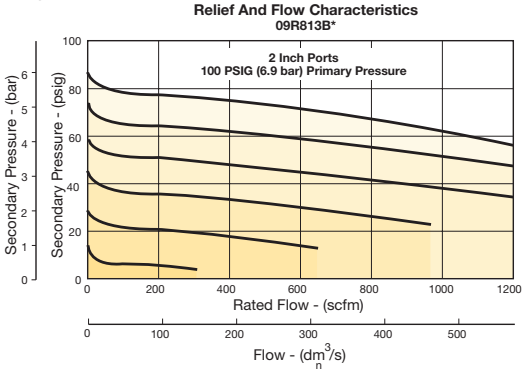
| 0 to 180 psig spring | **PS627** |



## Flow Charts

### 2" Regulator



**⚠ WARNING**

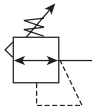
**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

# 51R Regulators – Relieving

- Pressure reference indicating dial face
- Non-rising, pressure-adjustment dial
- Self-relieving
- Full pressure adjustment in less than one full turn
- Recommended for pilot-air applications
- Constant bleed, piston operated
- 1/4" port (NPT, BSPP)



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | Standard Pressure 5 to 160 psig (0.34 to 11 bar) | **51R126RA** |
| 1/4" | Low Pressure 2 to 40 psig (0.14 to 3 bar) | **51R125RA** |

## Operating information

| | |
|---|---|
| Adjusting pressure range: | 2 to 40 psig (0 to 2.8 bar)<br>5 to 160 psig (0 to 11.0 bar) |
| Bleed Rate: | 0.05 scfm (0.02 $dm^3/s$, ANR) |
| Operating temperature (max): | 32°F to 150°F (0°C to 65.6°C) |
| Supply pressure (max): | 300 psig (20.7) |
| Flow capacity†: | 0.7 scfm (0.3 $dm^3/s$, ANR) |
| Weight: | 1.3 lb (0.5 kg) |

† scfm = Inlet pressure 100 psig (6.9 bar) inlet. Secondary pressure 90 psig (6.2 bar).

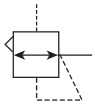
# R119 – Pilot Operated Regulators

- Adapted for control by a remote or distant small pilot regulator. Ideal for maximum capacity requirements in applications where units are not readily accessible
- High flow performance featuring rugged design for the most demanding applications
- Ideal for those installations calling for constant pressure with wide variation in flow
- Diaphragm operated design with balanced poppet and constant bleed pilot for quick and accurate regulation.
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Reverse flow available
- 1/4", 3/8", 1/2" ports (NPT, BSPP)



| Port Size | Description (0-125 psig reduced pressure) | Part Number |
|---|---|---|

## Technical Information

### Accuracy
+/- 1.0% of F.S.*

* Full scale (F.S.) - For 2 bar (29 psig) versions this will be 2 bar (29 psig), for the 10 bar (145 psig) version full scale will be 10 bar (145 psig).

### Air consumption
No consumption in stable regulated situation.

### Display
The regulator is provided with a digital display, indicating the output pressure, either in bar or psig.

The factory setting is as indicated on the label, can be changed through to software at all times (parameter 14)

### Supply voltage
24 VDC +/- 10%

### Power consumption
Max. 1.1W with unloaded signal outputs

### Control signals
The electronic pressure regulator can be externally controlled through an analogue control signal of either 0-10V or 4-20mA. (parameter 4).

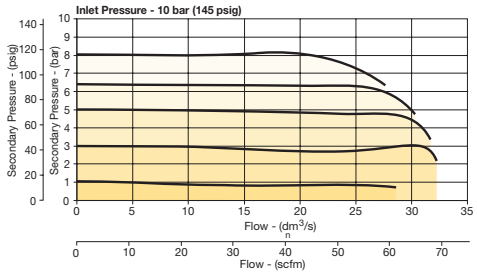
### Output signals
As soon as the output pressure is within the signal band a signal is given of 24VDC, PNP Ri = 1 kOhm
Outside the signal band this connection is 0V.

### Connections
(In case of output signal (Option D)
Central M12 connector 4-pole
The electrical connections are as follows:

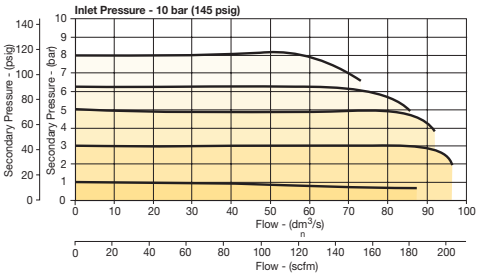
| Pin No. | | Function | Color |
|---|---|---|---|
| 1 | 24 V | Supply | Brown |
| 2 | 0 to 10 V | Control Signal Ri = 100k Ω | White |
| | 4 to 20mA | Control Signal Ri = 500 Ω | |
| 3 | 0 V (GND) | Supply & Set Point Ground | Blue |
| 4 | 24 V | Alarm Output Signal | Black |

## Flow Charts

### P31P Regulator 1/4" Ports



### P32P Regulator 1/2" Ports



**Degree of protection:** IP65

### EU conformity
CE: standard
EMC: according to directive 89/336/EEC
This pressure regulator is in accordance with:

**EN 61000-6-1:2001** **EN 61000-6-2:2001**
**EN 61000-6-3:2001** **EN 61000-6-4:2001**

### Mounting position
Preferably vertical, with the cable gland on top.

### Materials: P31P & P32P

| | |
|---|---|
| Magnet core | Steel |
| Solenoid valve poppet | FPM |
| Solenoid valve housing | Techno polymer |
| Regulator body (P31P & P32P versions) | Aluminum |
| Regulator top housing | Nylon |
| Valve head | Brass & NBR |
| Remaining seals | NBR |

## How to change parameters – How to Videos available at www.parker.com/pneu/propreg

Pressing the Accept key "acc" for more than 3 seconds, will activate parameter change mode. The user can then select the parameters by pressing up or down key (display will show Pxx). When parameter number is correct, pressing accept again will enter parameter number (display will show parameter value).

Pressing the up or down key will change the parameter itself (display will flash indicating parameter editing mode). Pressing the accept key will accept the new parameter value (all digits will flash whilst being accepted).

After releasing all keys, the next parameter number will be presented on the display (you may step to the next parameter). When no key is pressed, after 3 seconds the display will show the actual output pressure.

When the unit is initially powered up allow approximately 10 seconds for the unit to "boot-up" before changing parameter settings.

Only parameter numbers 0, 4, 6, 8, 9, 14, 18, 19, 20, 12, 13 and 21 are accessible to edit. All other parameters are fixed.

**Manual mode:**
When keys DOWN and UP are pressed during startup, (connecting to the 24V power supply) manual mode is activated. This means that the user is able to in/decrease the output pressure of the regulator, by pressing the UP or DOWN key. During this action the display will blink, indicating that the manual mode is activated. After powering up again, the unit will revert back to normal mode.

## Back to Factory Setting

After start up. (Power is on)
Entering this value in parameter 0 will store the calibrated factory data into the working parameters.
(Default calibration data is used)

### Parameter Number 0 – Reset Back to Factory Settings

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P00 | 000.<br>Flashing Decimal | 003.<br>Flashing Decimal | 003<br>Flashing | P01 |
| Description | Accesses changeable parameters. | Accesses parameter no. 0. | Displays current parameter value. | Edits parameter. 3 = standard factory settings. If other than 3, use Up or Down Arrow and accept 3 | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Control Signal

The unit is factory set for 0-10 V control signal. If 4-20 mA control signal is required, change parameter 4.

### Parameter Number 4 – Set Control Signal in Volts or Milliamps

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P04 | 001.<br>Flashing Decimal | 000.<br>Flashing Decimal | 000<br>Flashing | P05 |
| Description | Accesses changeable parameters. | Accesses parameter no. 4. | Displays current parameter value. 1 = V 0 = mA | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Output Signal

Parameter 6 is used to set the type of output signal to your PLC. This parameter is used as follows:

Output Signal option "0" = Digital Output – PNP
- Factory set at "0" Non Adjustable

Output Signal option "P" = Digital PNP or Analog 1-10V
- Factory set at "1" for Analog Signal
- Convert to Digital PNP by changing parameter to "0" setting

Output Signal option "N" = Digital NPN or Analog 1-10V
- Factory set at "1" Analog Signal
- Convert to Digital NPN by changing parameter to "0"

Output Signal option "M" = Analog 4-20 mA
- Factory set at "2" Non Adjustable

### Parameter Number 6 – Set Output Signal

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P06 | 001.<br>Flashing Decimal | ###.<br>Flashing Decimal (Value 0, 1 or 2) | ###.<br>Flashing | P07 |
| Description | Accesses changeable parameters. | Accesses parameter no. 6. | Displays current parameter value. 1 = m factory default for P3H with analog options | Edits parameter. 0 = digital (NPN or PNP) 1 = analog 0..10V 2 = analog 4..20 mA | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Adjust Span Analog Output Signal

Set value is a % of Full Analog range. As an example for a 0-10V output signal, the original factory setting of 100% will give you an adjustment of 0-10V. If you reset Parameter 8 to 50%, the new output range would be 0-5V or 50% of the full range.

In the event that the output signal is to low, in a certain application, you can adjust it by increasing Parameter 8 to a maximum value of 130% of scale.

Note that all values are nominal and that an actual measurement may be required to ensure signal strength.

### Parameter Number 8 – Adjust Span Analog Output Signal

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P08 | 100.<br>Flashing Decimal (For 2 bar versions value = 92) | ###.<br>Flashing Decimal (Value between 0 and 130) | ###.<br>Flashing | P09 |
| Description | Accesses changeable parameters. | Accesses parameter no. 8. | Displays current parameter value. | Edits parameter. | Accepts and saves new parameter setting and implements the new analog signal span. | Sequences to next parameter. |

## Adjust Digital Display

If necessary, adjustments can be made to the digital display when using an external pressure sensor.

### Parameter Number 9 – Adjust Digital Display Value (Pressure Calibration)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P09 | ###.<br>Flashing Decimal | ###.<br>Flashing Decimal | ###<br>Flashing | P 10 |
| Description | Accesses changeable parameters. | Accesses parameter no. 9. | Displays current digital display | Use up or down arrows and accept to adjust the display value if using an external pressure sensor. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Pressure Scale

Units with NPT port threads are supplied with a factory set psig pressure scale. Use parameter 14 to change scale to bar.

### Parameter Number 14 – Set Pressure Scale in psig or bar

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Press | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| Until Display Reads | Pxx | P 14 | 001.<br>Flashing Decimal | 000.<br>Flashing Decimal | 000<br>Flashing | P 15 |
| Description | Accesses changeable parameters. | Accesses parameter no. 14. | Displays current parameter value.<br>1 = psig<br>0 = bar<br>2 = MPa | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

Pneumatic Division
Richland, Michigan
www.parker.com/pneumatics

## Preset Minimum Pressure

If there is a need for a pre-set Minimum pressure, use parameter 18. (Note: preset pressure is affected by % P19.)

### Parameter Number 18 – Set Minimum Preset Pressure

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| **Press** | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| **Until Display Reads** | Pxx | P 18 | 000.<br>Flashing Decimal | # # #.<br>Flashing Decimal (value between 0 and 200) | # # #<br>Flashing | P 19 |
| **Description** | Accesses changeable parameters. | Accesses parameter no. 18. | Displays current parameter value. Incremental value is:<br>2 bar unit:<br>x 2 mbar x % P19<br>10 bar unit:<br>x 10 mbar x % P19 | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

## Set Pressure Correction

Pressure correction allows the user to set a Maximum pressure as a percentage of secondary pressure F.S.

**Example:** If F.S. is 10 bar, set parameter 19 to 50 for Maximum preset pressure of 5 bar.

Pressure correction also affects the Minimum preset pressure in parameter 18.

**Example:** If F.S. is 10 bar and parameter 18 is set to a value of 100 (1 bar), and parameter 19 is set to 50%, then the actual Minimum preset pressure seen is 0.5 bar.

### Parameter Number 19 – Set Maximum Preset Pressure

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| **Press** | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| **Until Display Reads** | Pxx | P 19 | 100.<br>Flashing Decimal | # # #.<br>Flashing Decimal (value between 0 and 100) | # # #<br>Flashing | P20 |
| **Description** | Accesses changeable parameters. | Accesses parameter no. 19. | Displays current parameter value. Incremental value is:<br>% of F.S. | Edits parameter. | Accepts and saves new parameter setting. | Sequences to next parameter. |

www.parker.com/pneumatics

## Behavior Control

The regulation speed of the pressure regulator can be modified by means of one parameter. (P 20)
The value in this parameter has a range from 0-5. A higher value indicates slower regulation speed, but will be more stable.

### Parameter Number 20 – Set Behavior Control

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| **Press** | acc<br>3-6 seconds | ▼ or ▲ | acc | ▼ or ▲ | acc | |
| **Until Display Reads** | Pxx | P20 | 003. | ###.<br>Flashing Decimal (value between 0 and 5) | ###<br>Flashing | P21 |
| **Description** | Accesses changeable parameters. | Accesses parameter no. 20. | Displays current parameter value. | Edits parameter<br>0 = custom set*<br>1 = fastest (narrow proportional band)<br>2 = fast<br>3 = normal<br>4 = slow<br>5 = slowest (proportional band is broad) | Accepts and saves new parameter setting. | Sequences to next parameter. |

* When the value 0 is entered, you are able to create your own custom settings true parameters 12, 13 and 21.

## Fine Settings
## Set Proportional Band

Proportional band is used for setting the reaction sensitivity of the regulator. The displayed value is X 10 mbar and has a range between 50 (0.5 bar) and 250 (2.5 bar).

### Parameter Number 12 – Set Proportional Band (P20 Must be Set to 0)

| Step | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|

# PAR™-15 Programmable Air Regulating Valve

PAR™-15 is a unique 3-Way, programmable, air regulating valve that functions as a precise, high-flow, multi-purpose regulator.

Signals from a computer, programmable controllers or from simple electrical switches, fed to the valve's four solenoids, control the division of a single inlet pressure into any one of fifteen equally spaced output pressures.

The valve's response is instant and repeatable, reducing the need for expensive feedback controls.

It goes far beyond the capabilities of conventional controls by providing a limitless range of application possibilities including cylinder pressure/stroke control, clamping, retracting, approach, flow, and impact.

PAR™-15 eliminates shock absorbers, increases tool life, saves air, and reduces workpiece damage.

- Full flow capacity for direct air device operation.
- Quick, full flow exhaust.
- Instantly repeatable response.
- Air saving design, close crossover, non-constant bleed.
- Wide range of discrete output pressures.
- Normally closed or normally open operators.
- Compatible with computers and programmable controllers with digital solid state relay outputs.
- Meets NEMA 4 standard (6-Pin option only).

### Life Expectancy

Normal multi-million cycle life expectancy of these valves is based on the use of properly filtered air at room temperature.

**No Enclosure**

**NEMA 4 Enclosure – 6-Pin Connector**

## Operating information

| | |
|---|---|
| Pressure range: | |
| Inlet (max) | 150 psig (1035 kPa) |
| Output (min) | 6 psig (41 kPa) |
| Temperature range (ambient)†: | 32°F to 140°F (0°C to 60°C) |
| Voltage range: | +10% to –10% of rating |
| Flow capacity: | |
| Inlet to outlet | 275 scfm (129.8 $dm^3/s$, ANR) |
| Outlet to exhaust | 225 scfm (106.2 $dm^3/s$, ANR) |
| Output response: | 20 milliseconds |
| Weight: | |
| Without enclosure | 6.3 lb (2.9 kg) |
| With 6-pin & cord | 8.0 lb (3.6 kg) |

⚠ † **Caution: If it is possible that the ambient temperature may fall below freezing, the media must be moisture free to prevent internal damage or unpredictable behavior.**

### Lubrication

Although the valve does not require lubrication for a normal service life, use of SAE 10 mineral base oil is recommended to extend component life. This should be supplied using a 1/2 inch full flow lubricator located upstream of the valve inlet port.

**CAUTION:**
**DO NOT USE SYNTHETIC, RECONSTITUTED, OR OILS WITH AN ALCOHOL CONTENT.**

### Wiring

Follow all national and local electrical codes.

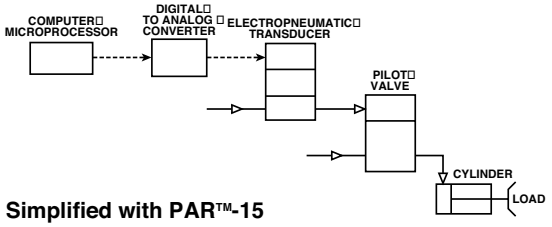
* Available in 24VDC and 120VAC Only. Not NEMA 4 rated.

## Electropneumatic System

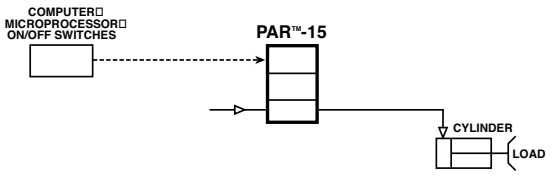
A conventional system is usually composed by several electronic and pneumatic components as shown on the schematic. The cylinder which is moving a load is operated with a pilot valve which receives the instructions from an electropneumatic transducer. The transducer converts electronic signals to pneumatic signals. These electronic signals are usually of an analog type, but controllers/computer microprocessors send digital signals as outputs, therefore, a digital to analog signal converter is required.

The simplified schematic with the PARTM-15 is reduced to fewer components since the PARTM-15 takes the place of the digital to analog converter, the electropneumatic transducer, and the pilot valve. The benefits being fewer components, and less maintenance and downtime.

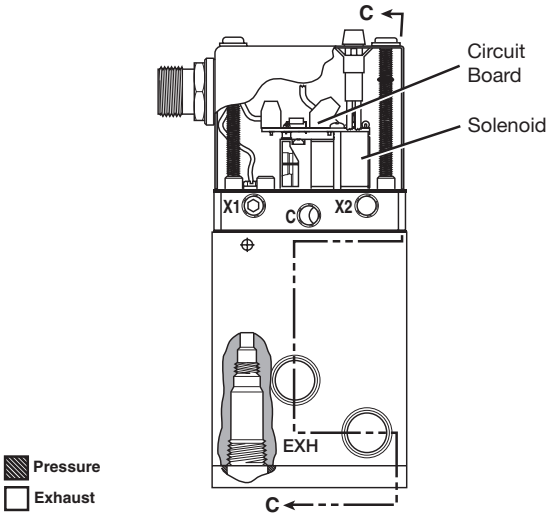
**Conventional**

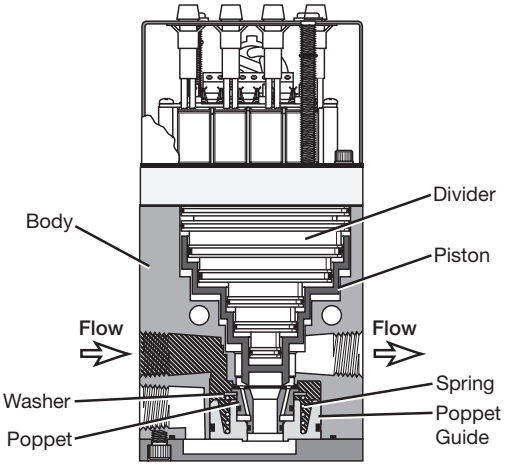


**Simplified with PAR™-15**



**Parker Hannifin Corporation**
Pneumatic Division
Richland, Michigan
www.parker.com/pneumatics





Section C-C

## Application

Pneumatic systems operating under multiple pressures, and requiring almost instantaneous pressure changes are good application cases for the PAR™-15. Usually the more pressures needed for a particular operation, the easier it is to justify the valve, since it will take the place of several pneumatic regulators and selector valves.

Among the most common applications are brakes and clutches, painting, printing feeds and tension, robotics, and spot welding.

**Other Applications:**

- Air Chucks
- Air Cylinder Control
- Air Winches
- Blow Molding Control
- Contact Force Control
- Conveyor Control
- Die Cushioning
- Dynamic Braking
- Fuel Control
- Hopper Control
- Robot Gripper Control
- Valve Positioning
- Variable Clamping
- Variable Pressure Processing
- Torque Control
- Wire Tensioning

## Operation

Four solenoids are controlled by on/off signals that selectively divide any input pressure into any one of 15 equally spaced pressures plus zero. See the truth table.

Full flow exhaust permits instant reduction to any lower selected pressure or zero. High relief capacity quickly vents downstream overpressure. The output pressure will begin to change within 20 milliseconds after a change in the electrical input to one or more of the solenoids. However, the time which elapses until the output pressure reaches the new level will depend upon the volume of air, the size of the connection from the PAR™-15 valve and the magnitude of the pressure change.

A small regulator may be used to feed the external pilot port X1 on units with normally closed solenoid operators or X2 on units with normally open solenoid operators. The PAR™-15 valve will then divide this pressure independent of mainline supply pressure so long as the pilot regulator is set to a pressure below the mainline supply pressure. A regulated external supply will eliminate the effects of fluctuating mainline pressures. (NOTE: A regulator placed upstream of the inlet also eliminates the effects of fluctuating pressures).

The PAR™-15 is available with two types of output pressure regulation: increasing output and decreasing output. In the increasing output pressure regulation type, normally closed solenoid operators are used to divide the input pressure into 15 equal steps, ranging from 0 PSIG (all solenoid operators de-energized) to full line pressure (all solenoid operators energized). With the decreasing output pressure regulation type, normally open solenoid operators are used to divide the input pressure into 15 equal steps, but starting with full line pressure (all solenoid operators de-energized) and ending with 0 PSIG (all solenoid operators energized).

## Truth Table

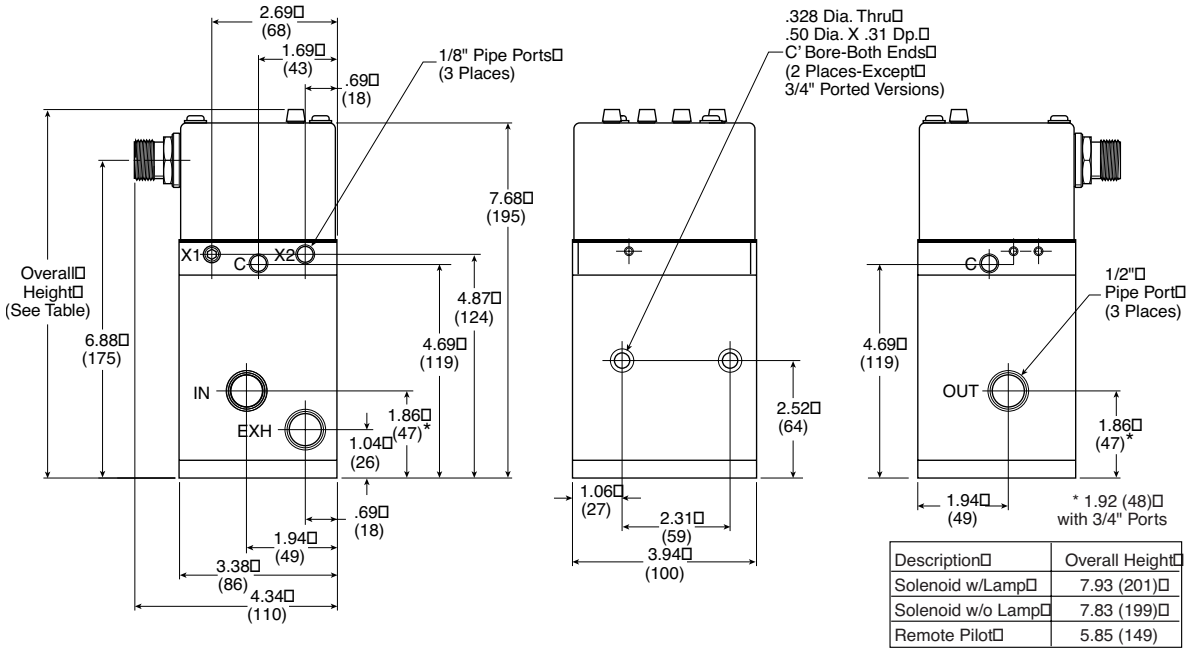
| Normally Closed Valves / Solenoids | Normally Open Valves / Solenoids | | | |
|---|---|---|---|---|
| Binary Input * 8 4 2 1 | Binary Input * 8 4 2 1 | | | |
| Pin Number † 5 3 2 1 | Pin Number † 5 3 2 1 | Proportion of Inlet Pressure | PSIG Output@ 75 PSIG Inlet †† | PSIG Output@ 90 PSIG Inlet |
| 0 0 0 0 | 1 1 1 1 | 0 | 0 | 0 |
| 0 0 0 1 | 1 1 1 0 | 1/15 | 5 | 6 |
| 0 0 1 0 | 1 1 0 1 | 2/15 | 10 | 12 |
| 0 0 1 1 | 1 1 0 0 | 3/15 | 15 | 18 |
| 0 1 0 0 | 1 0 1 1 | 4/15 | 20 | 24 |
| 0 1 0 1 | 1 0 1 0 | 5/15 | 25 | 30 |
| 0 1 1 0 | 1 0 0 1 | 6/15 | 30 | 36 |
| 0 1 1 1 | 1 0 0 0 | 7/15 | 35 | 42 |
| 1 0 0 0 | 0 1 1 1 | 8/15 | 40 | 48 |
| 1 0 0 1 | 0 1 1 0 | 9/15 | 45 | 54 |
| 1 0 1 0 | 0 1 0 1 | 10/15 | 50 | 60 |
| 1 0 1 1 | 0 1 0 0 | 11/15 | 55 | 66 |
| 1 1 0 0 | 0 0 1 1 | 12/15 | 60 | 72 |
| 1 1 0 1 | 0 0 1 0 | 13/15 | 65 | 78 |
| 1 1 1 0 | 0 0 0 1 | 14/15 | 70 | 84 |
| 1 1 1 1 | 0 0 0 0 | 15/15 | 75 | 90 |

Table above illustrates available output pressures for inlet pressures of 75 PSIG and 90 PSIG. Inlet pressure may be any value between 15 and 150 PSIG. Output pressure increment will be 1/15 of inlet pressure.

* 0 = Voltage "OFF"
1 = Voltage "ON"

† Available only on units with 6-Pin connector.

†† Shaded output pressures shown are theoretical and are below the minimum operating range of the valve and should not be used. Please refer to the Engineering Specifications for minimum output.



| Description | Overall Height |

## Narrow Band Control

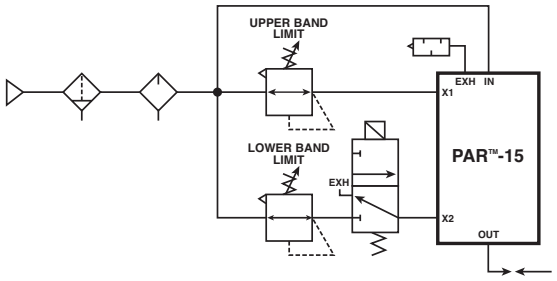
The PAR™-15 can also be used to provide a narrower band of output pressures with the lowest selected pressure greater than zero.

***EXAMPLE:***

Assume valve with normally closed solenoids. Customer desires to divide a range from 25 PSIG to 100 PSIG into 15 increments of 5 PSIG each. This is done by applying 100 PSIG to the external pilot supply port X1 and 25 PSIG to the pilot exhaust port X2.

Two 1/8 inch relieving regulators are required. The addition of one 3-Way normally closed solenoid operated valve allows the additional selection of 0 PSIG. These are connected as shown in the diagram. The relieving regulators set the upper and lower band limits. With a normally closed PAR™-15 valve, zero output pressure may be selected by simultaneously de-energizing the 3-Way valve and the PAR™-15 valve solenoids. With a normally open PAR™-15 valve, zero output pressure may be selected by simultaneously de-energizing the 3-Way valve and energizing the PAR™-15 valve solenoids.

**Narrow Band Control Diagram**



Note: For valves with normally open solenoids, reverse the X1 and X2 connections.

## Cascading

Two PAR™-15's can also be used in conjunction to provide 240 steps (versus 15 steps from one valve), therefore more output pressures. See diagram.

Connect the outlet port marked OUT of the valve upstream to the 1/8" port marked C of the valve downstream. A port/pipe reducer(s) must be used to accomplish this task. If desired, a pressure gauge can be installed between these two points. A gauge isolator should be used to protect the gauge from pulsating pressures.

Connect the outlet port marked OUT of the valve downstream to the supply side of the system requiring multiple pressures. If desired, a pressure gauge can be installed downstream of the outlet port. A gauge isolator should be used to protect the gauge from pulsating pressures.

DO NOT PLUG THE 1/8" PORTS MARKED C AND X2 ON THE VALVE UPSTREAM AND X2 ON THE VALVE DOWNSTREAM.

Operation of the valves is the same as mentioned previously under the Operation section. See Cascading Truth Table for the proper input signal to each solenoid, and the resulting proportion of inlet pressure for an output pressure.

A formula can be used to calculate the output pressure of the valve downstream.

$$\text{OUTPUT PRESSURE (PSIG)} = \frac{\text{LINE PRESSURE (PSIG)}}{15} \times \left( \frac{\text{BINARY INPUT UPSTREAM VALVE}}{16} + \text{BINARY INPUT DOWNSTREAM VALVE} \right)$$

***Where:***

**LINE PRESSURE** is the supply pressure to both valves and it must be equal.

**BINARY INPUT UPSTREAM VALVE** is the binary number, a number from 0 to 15 depending on which solenoids are energized (normally closed solenoids) or de-energized (normally open solenoids) on the valve upstream.

**BINARY INPUT DOWNSTREAM VALVE** is the binary number, a number from 0 to 15 depending on which solenoids are energized (normally closed solenoids) or de-energized (normally open solenoids) on the valve downstream.

***EXAMPLE:***

Assume the line pressure is 120 PSIG, the valve upstream has inputs 1 & 2 energized, and the valve downstream has inputs 1 & 8 energized. Also, assume normally closed solenoids. What is the output pressure of the valve downstream?

**SOLUTION:**

BINARY INPUT VALVE UPSTREAM = 1 + 2 = 3

BINARY INPUT VALVE DOWNSTREAM = 1 + 8 = 9

$$\text{OUTPUT PRESSURE} = \frac{120}{15} \times \left( \frac{3}{16} + 9 \right) = 8 \times 9.1875 = 73.5 \text{ PSIG}$$

Table above illustrates available output pressures for inlet pressures of 75 PSIG and 90 PSIG. Inlet pressure may be any value between 15 and 150 PSIG. Output Pressure increment will be 1/15 of inlet pressure.

* 0 = Voltage "OFF"
1 = Voltage "ON"

† Available only on units with 6-Pin connector.

†† Shaded output pressures shown are theoretical and are below the minimum operating range of the valve and should not be used. Please refer to the Engineering Specifications for minimum output.

Note: Full table appears in instruction sheet enclosed with the product.

## Solenoid Kits & Electrical Data

### Class F Solenoids

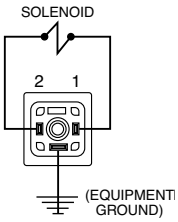
| Voltage / Cycles | Solenoid Type* | Power Consumption (watts) | Holding Current (AMPS) | Part Number |
|---|---|---|---|---|
| 12VDC | NC | 1.2W | 0.1 | **PS2982B45P** |
| 24VDC | NC | 1.2W | 0.05 | **PS2982B49P** |
| 120V/60Hz | NC | 1.6VA | 0.013 | **PS2982B53P** |
| 24V/60Hz | NC | 1.6VA | 0.066 | **PS2982B42P** |
| 24V/60Hz | NO | 2.4VA | 0.1 | **PS3202B42P** |
| 12VDC | NO | 1.8W | 0.15 | **PS3202B45P** |
| 24VDC | NO | 1.8W | 0.075 | **PS3202B49P** |
| 120V/60Hz | NO | 2.4VA | 0.02 | **PS3202B53P** |

* NC = Normally Closed
NO = Normally Open

## Units with No Enclosure

Connect input and common signals to each one of the solenoids marked with the binary inputs 1, 2, 4 and 8, using the 3-Pin female connector kits shown in the catalog. Follow the installation instructions included with the 3-Pin female connector kits for the proper installation.

If you elect not to use the 3-Pin female connector kits, you may use three female spade connectors per solenoid and connect the wires as shown on the figure.



## Units with Enclosure and Without 6-Pin Receptacle

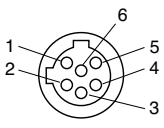
Connect input and common signals to the terminal block on the circuit board labelled TB1. Connect each solenoid input (1, 2, 4, & 8) to the respective label on the circuit board. Connect each common to the input labelled C on the circuit board.

## Units with Enclosure and 6-Pin Micro Receptacle

These units use the following brand names for 6-Pin micro connectors:

| Brand name | Receptacle | Connector w/ 6 foot cord |
|---|---|---|
| Brad Harrison | 7R6006A19A120 | 706000D02F060 |
| Joy | 5000127-41 | 5000127-2 |

Connection is made as shown in the chart below.



**Micro**

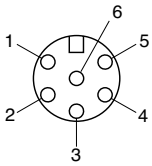
| Pin | Wire color | Function |
|---|---|---|
| 1 | Red-White | Input 1 |
| 2 | Red | Input 2 |
| 3 | Green | Equipment Ground |
| 4 | Red-Yellow | Common |
| 5 | Red-Black | Input 8 |
| 6 | Red-Blue | Input 4 |

## Units with Enclosure and 6-Pin Mini Connector

These units use either one of the following brand names for 6-Pin mini connectors:

| Brand Name | Receptacle | Connector w/ 6 Foot Cord |
|---|---|---|
| Brad Harrison | 42605 | 42602 |
| Joy | X8987-2 | X8987-4 |

Connection is made as shown in the chart below.



**Mini**

| Pin | Wire color | Function |
|---|---|---|
| 1 | Orange | Input 1 |
| 2 | Blue | Input 2 |
| 3 | Black | Input 4 |
| 4 | White | Common |
| 5 | Red | Input 8 |
| 6 | Green | Equipment Ground |

## Units with Enclosure, 6-Pin Connector and Indicator Lamps

Each indicator lamp signals when the corresponding solenoid operator is actuated. Lamps that fail to light may need to be replaced or a check made to see if a connection has become loose.

Follow the service kit instructions included with the repair kits for proper installation of replacement lamps.

For units with DC solenoids and indicator lamps red wire is (+) positive white wire is (-) negative.

⚠ **Caution: DC solenoids with indicator lamps are polarity sensitive. Observe polarities indicated above.**

### Available Lamps

| Description | Part number |
|---|---|
| Lamp (120/60AC) with spring clip | **K352428B** |
| Lamp (24VDC) with spring clip | **K352429B** |

## 15mm 3-Pin DIN 43650C

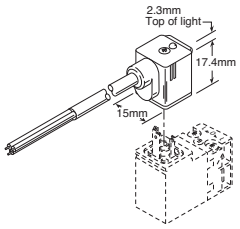
| Description | Connector | Connector with 6' (2m) Cord |
|---|---|---|
| Unlighted | **PS2932BP** | **PS2932JBP** |
| Light – 12VAC or DC | **PS294675BP** | **PS2946J75BP*** |
| Light – 24VAC or DC | **PS294679BP** | **PS2946J79BP*** |
| Light – 110/120VAC | **PS294683BP** | **PS2946J83BP*** |

* LED with surge suppression.

Note: Max ø6.5mm cable size required for connector w/o 6' (2m) cord.

**Engineering Data:**

Conductors: 2 Poles Plus Ground
Cable Range (Connector Only):
4 to 6mm (0.16 to 0.24 Inch)
Contact Spacing: 8mm



## Service Kit

| | |
|---|---|
| Piston, poppet assembly, all rubber seals and gaskets | **K352413B** |

## *calys* Software

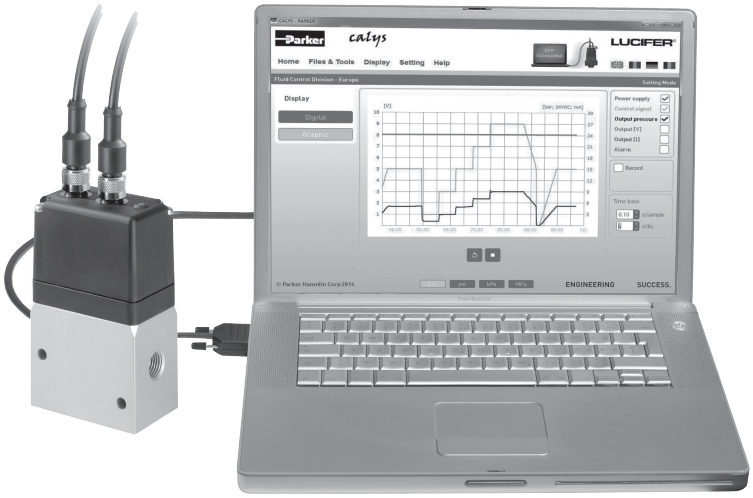
Calys is developed to configure all the parameters of the EPP4. A specific cable is needed for the communication between the EPP4 and a PC.

To download free Calys software click on

**www.parker.com/fcde/support**

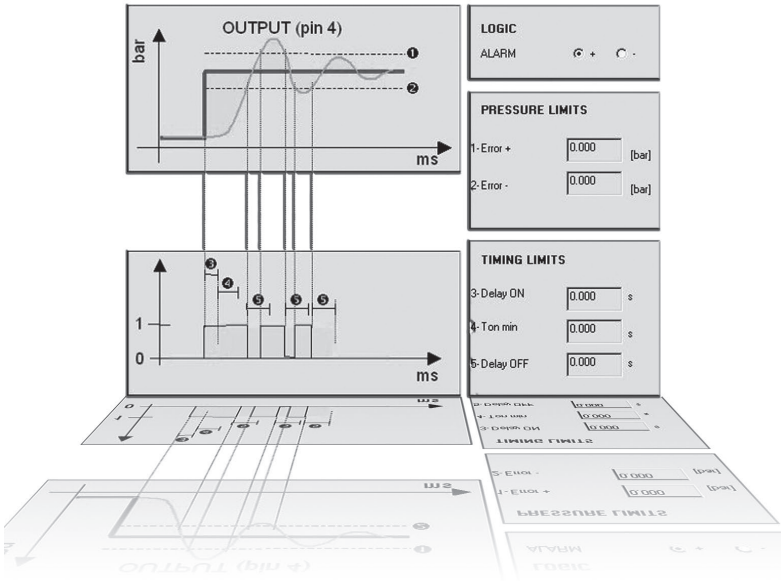
Calys offers many capabilities:

- Live monitoring (control signal, regulated pressure, supply voltage,…)
- Recording of the main parameters (control signal, regulated pressure, supply voltage,…) in an Excel file
- Free calibration for the inputs and outputs
- Adjustable alarm (positive-negative, pressure limits, delays)
- Configuration files are easy to duplicate
- Complete and interactive help file
- Data in 4 different pressure units
- Menus in 4 languages (English, German, French and Italian)



**Specific communication cable with M12, 5-pole to USB connection**

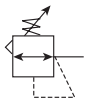
**Part Number 496449**



# P3RA302 High Precision Regulators

The P3RA302 Regulator is designed for applications that require high capacity and accurate process control in a small package. A poppet valve which is balanced by utilizing a convoluted diaphragm, insures a constant output pressure even during wide supply pressure variations. Stability of regulated pressure is maintained under varying flow conditions through the use of an aspirator tube which adjusts the air supply in accordance with the flow velocity.

- Control sensitivity of .250" (.010 psig) (.64 cm) water column variation allows use in precision applications
- A compensating diaphragm lets the regulator remain unaffected by supply pressure changes
- An aspirator tube compensates downstream pressure droop under flow conditions
- A separate control chamber isolates the diaphragm from the main flow to eliminate hunting and buzzing
- Unit construction lets you service the regulator without removing it from the line
- 1/4" port (NPT)



| Port Size | Description | Part Number |
|---|---|---|
| 1/4" | 0.5 to 30 psig | **P3RA30232** |
| 1/4" | 1 to 60 psig | **P3RA30242** |
| 1/4" | 2 to 100 psig | **P3RA30252** |

**Operating information**

| | |
|---|---|
| Supply pressure: | 250 psig (17.2 bar), (1700 kPa) max |
| Ambient temperature: | -40°F to 200°F (-40°C to 93°C) |
| Sensitivity: | .250" (.010 psig) (.64 cm) water column |
| Flow capacity: | 40 scfm (68 $m^3$/HR) @ 100 psig (7.0 bar), (700 kPa) supply and 20 psig (1.5 bar), (150 kPa) setpoint |
| Exhaust capacity: | 2.0 scfm (3.4 m3/HR) where downstream pressure is 5 psig (.35 bar), (35 kPa) above 20 psig (1.5 bar), (150 kPa) setpoint |
| Supply pressure effect: | Less than 0.2 psig, (.014 bar), (.14 kPa) for 100 psig, (7.0 bar), (700 kPa) change in supply pressure |
| Hazardous locations: | Acceptable for use in zones 1 and 2 for gas atmosphere: Groups IIA and IIB and zones 21 and 22 for dust atmospheres |

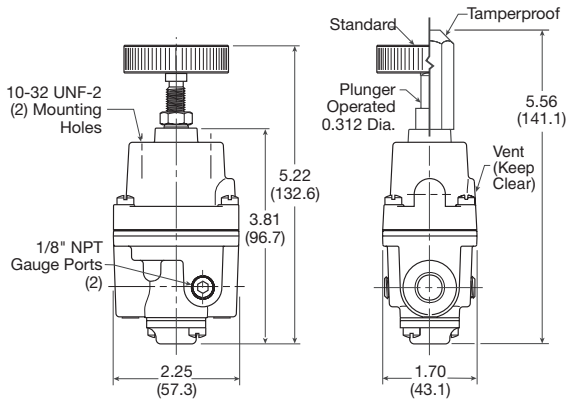
**⚠ WARNING**

**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

## CAUTION:

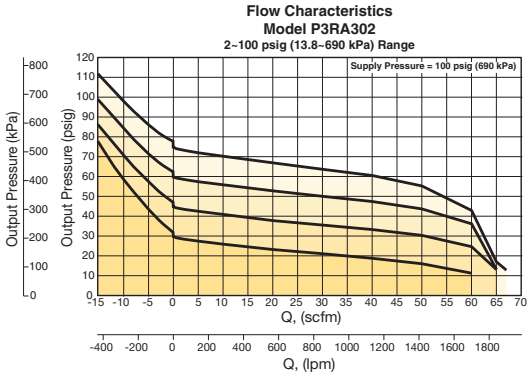
**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

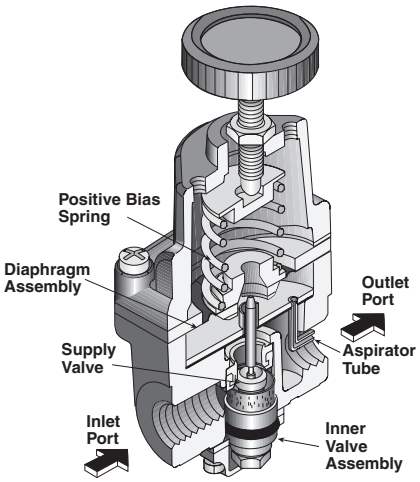


Inches (mm)

## Flow Charts

### P3RA302 1/4" Regulator





## Operating Principles

The P3RA302 Regulator uses the force balance principal to control the movement of the valve assembly which in turn controls the output pressure. When the regulator is adjusted for a specific set point, the downward force of the Positive Bias Spring causes the Diaphragm Assembly to move downward. The Supply Valve opens and allows air to pass to the Outlet Port. As the set point is reached, the downward force exerted by the Positive Bias spring is balanced by the upward force of the downstream pressure acting on the bottom of the Diaphragm Assembly. The resultant force moves the supply Valve upward to reduce the flow of air to the Outlet Port.

Outlet pressure is maintained as a result of balance between forces acting on the top and bottom of the Diaphragm Assembly.

# P3RA102 High Precision Regulators

The P3RA102 Regulator is designed for applications that require high capacity and accurate process control. A poppet valve which is balanced by utilizing a rolling diaphragm, insures a constant output pressure even during wide supply pressure variations. Stability of regulated pressure is maintained under varying flow conditions through the use of an aspirator tube which adjusts the air supply in accordance with the flow velocity.

- Control sensitivity of .125" (.005 psig) (.32 cm) water column allows use in precision processes
- Pressure balanced supply valve prevents supply pressure changes from affecting the setpoint
- Optional check valve permits dumping of downstream pressure when supply is opened to atmosphere
- Separate control chamber isolates the diaphragm from the main flow to eliminate hunting and buzzing
- An aspirator tube compensates downstream pressure droop under flow conditions

# P3RA102BP High Precision Relief Valves

The P3RA102BP is a high capacity relief valve that relieves excess pressure in a pneumatic system.

The P3RA102BP provides greater accuracy than standard relief valves over a narrow pressure range. The P3RA102BP is an excellent choice for a wide range of precision applications.

- Control sensitivity of .125" (.005 psig) (.32 cm) water column allows use in precision applications
- A separate control chamber and Aspirator Tube isolate the diaphragm from the main flow to eliminate hunting and buzzing
- Unit construction lets you service without removing it from the line

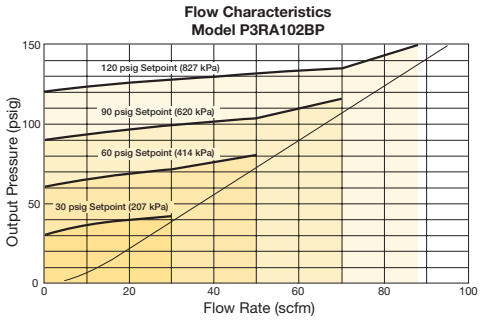
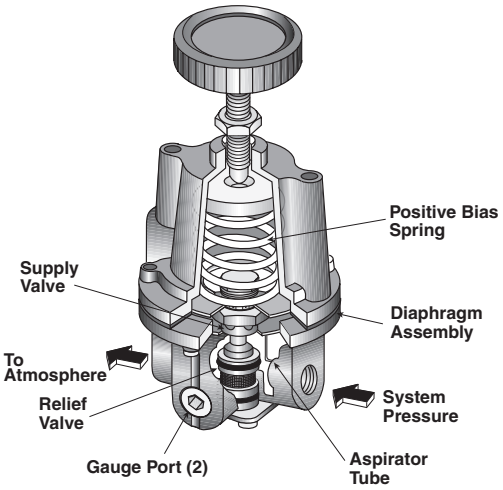
## Flow Charts

### P3RA102BP 1/4" Regulator





## Operating Principles

The P3RA102BP Regulator uses the force balance principle to open the Relief Valve and vent system pressure when the set point is exceeded.

Downstream pressure is transmitted through the Aspirator Tube to the bottom of the Diaphragm Assembly. When you adjust the range screw for a specific set point, the Positive Bias Spring compresses and exerts a force on the top of the Diaphragm Assembly. As long as the pressure acting on the bottom of the Diaphragm Assembly produces a force less than the spring force acting on the top of the Diaphragm Assembly, the Relief Valve remains closed. When system pressure increases, the force on the bottom of the Diaphragm Assembly increases until it reaches the set point. When system pressure increases beyond the set point, the assembly moves upward, lifting the Relief Valve from its seat and vents the downstream air.

If downstream pressure decreases below the set point, the assembly moves downward closing the Relief Valve.

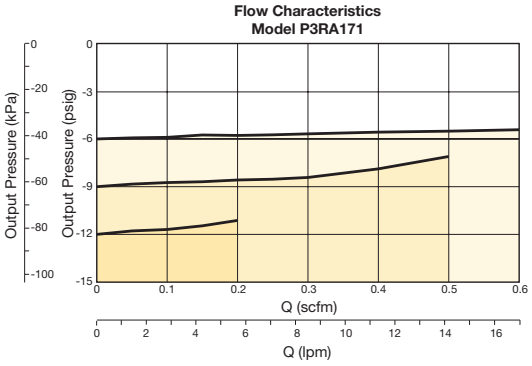
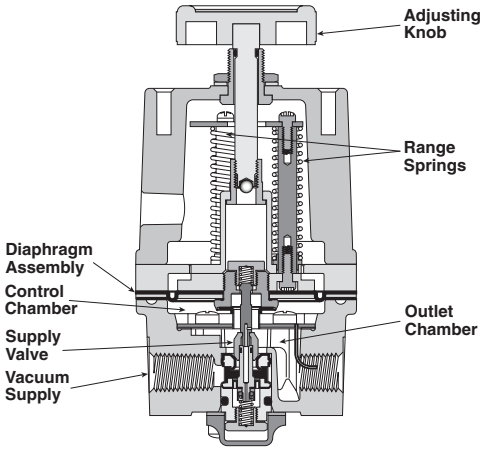
## Flow Charts

### P3RA171 1/4" Regulator





## Operating Principles

The Model P3RA171 Series vacuum regulator uses the force balance principle to control the movement of the Valve Assembly that controls output vacuum.

When the regulator is adjusted for a specific set point, the upward force of the Range Springs moves the Diaphragm Assembly upward. The Supply Valve opens and allows air to pass to the inlet port. As the set point is reached, the upward force exerted by the Range Springs is balanced by the force of the vacuum that pulls downward on the Diaphragm Assembly. The resultant force moves the Supply Valve downward to reduce the flow of air to the inlet port. Outlet vacuum is maintained as a result of balance between forces acting on the top and bottom of the Diaphragm Assembly.

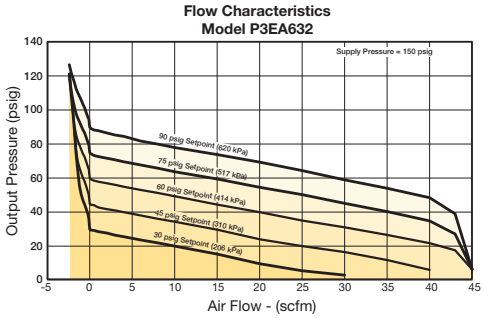
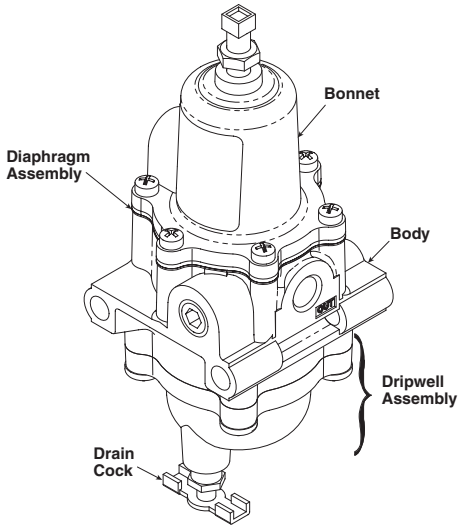
Inches (mm)

## Flow Charts

### P3EA632 1/4" Filter / Regulator





## Operating Principles

When you turn the Adjustment Screw to a specific setpoint, the Spring exerts a downward force against the top of the Diaphragm Assembly. This downward force opens the Supply Valve. Output pressure flows through the Outlet Port and the passage to the Control Chamber where it creates an upward force on the bottom of the Diaphragm Assembly.

When the setpoint is reached, the force of the Spring that acts on the top of the Diaphragm Assembly balances with the force of output pressure that acts on the bottom of the Diaphragm Assembly and closes the Supply Valve.

When the output pressure increases above the setpoint, the Diaphragm Assembly moves upward to close the Supply Valve and open the Exhaust Valve. Output pressure flows through the Exhaust Valve and out of the Exhaust Vent on the side of the unit until it reaches the setpoint.

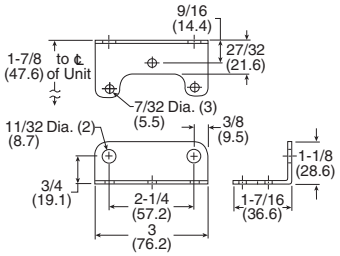
### Mounting bracket



**⚠ WARNING**

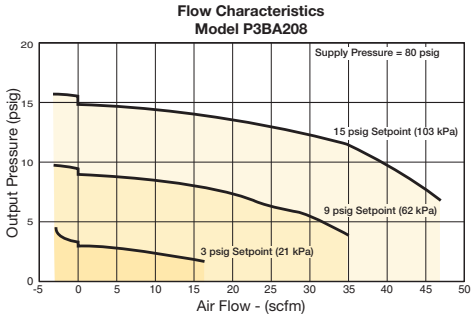
**Product rupture can cause serious injury.**
**Do not connect regulator to bottled gas.**
**Do not exceed Maximum primary pressure rating.**

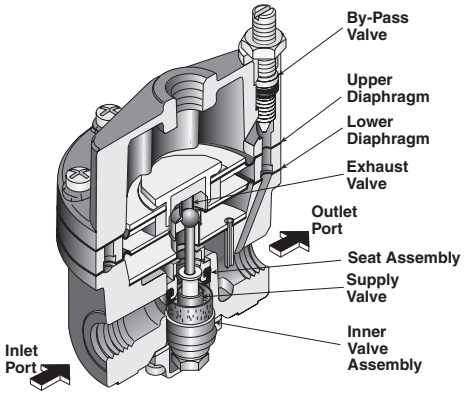
## CAUTION:

**REGULATOR PRESSURE ADJUSTMENT** – The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design. For best performance, regulated pressure should always be set by increasing the pressure up to the desired setting.

## Flow Charts

### P3RA102BP 1/4" Input Signal Amplifier





## Operating Principles

The P3BA208 Input Signal Amplifier is a pneumatic device capable of high flow and exhaust capacity. This device uses a force balance system to control the movement of the supply and exhaust valves.

At set point, the force due to signal pressure that acts on the top of the Upper Diaphragm balances with the force due to output pressure acting on the bottom of the Lower Diaphragm.

# P3BA45 Precision Pneumatic Input Signal Amplifier

- Five signal to output ratios meet most control element requirements.
- Control sensitivity of water column allows use in precision applications.
- Large Supply and Exhaust Valves provide high forward and exhaust flows.
- Soft Supply and Exhaust Valve seats minimize air consumption.
- A balanced Supply Valve minimizes the effect of supply pressure variation.
- An Aspirator Tube compensates downstream pressure droop under flow conditions.
- A separate Control Chamber isolates the diaphragm from the main flow to eliminate hunting and buzzing.
- Unit construction lets you service the P3BA45 without removing it from the line.

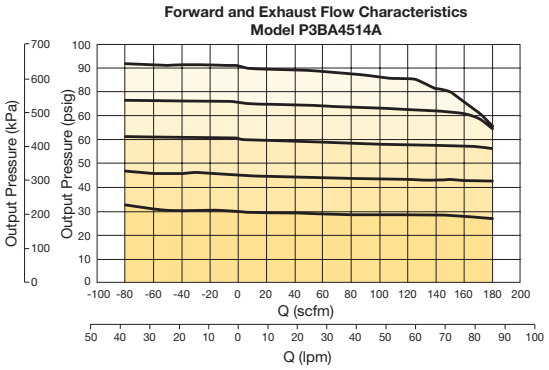
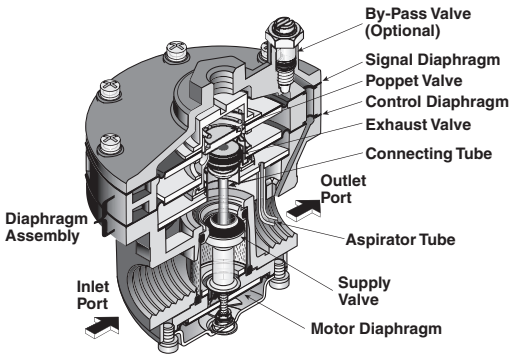
## Flow Charts

### P3BA45 1/2" & 3/4" Input Signal Amplifier





## Operating Principles

When signal pressure on the top of the Signal Diaphragm creates a downward force on the Diaphragm Assembly, the Supply Valve opens. Output pressure flows through the Outlet Port and the Aspirator Tube to the Control Chamber to create an upward force on the bottom of the Control Diaphragm. When the setpoint is reached, the force of the signal pressure that acts on the top of the Signal Diaphragm balances with the force of the output pressure that acts on the bottom of the Control Diaphragm to close the Supply Valve.

When the output pressure increases above the signal pressure, the Diaphragm Assembly moves upward to close the Supply Valve and open the Exhaust Valve. Because the Poppet Valve is closed, pressure flows down the Connecting Tube to the bottom of the Motor Diaphragm. This pressure keeps the Supply Valve tightly closed while in the exhaust mode. The Poppet Valve opens and excess output pressure exhausts through the vent in the side of the unit until it reaches the setpoint.

# P3TF Bulk Liquid Separators

- Tested in accordance with ISO 8573.9
- High liquid removal efficiencies at all flow conditions
- Low pressure losses for low operational costs
- Suitable for variable flow compressors
- Low maintenance
- External surface epoxy painted for maximum corrosion resistance
- 1/4" to 3" ports (NPT, BSPP)

## Applications

- Bulk liquid removal at any point in a compressed air system
- Protection of refrigeration and heatless regenerative desiccant dryers
- Liquid removal from compressor Inter-coolers / after-coolers
- Liquid separation within refrigeration dryers
- Pre-filtration

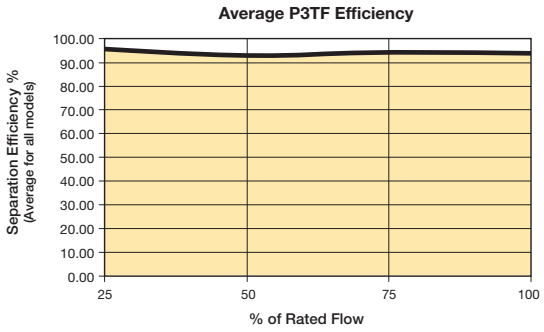
## Flow



## Operation

- Air enters the bulk liquid separator inlet and turns into the separator module.
- The inlet of the separator module contains a set of fixed vanes which the air must pass through.
- The vanes force the air to spin inside the vessel.
- The spinning air is then forced to change direction as it passes the impeller.
- A vortex is created which, due to the design of the separator module, narrows and intensifies as it reaches the lower part of the separator module.
- Bulk liquid is removed from the airstream due to:
  - directional changes of the airstream
  - velocity changes
  - centrifugal action of the vortex
- As the vortex reaches the bottom of the module, air is forced through the center of the vortex.
- Aerospace turning vanes, located in the outlet of the separator module, turn an inefficient corner into a number of more efficient corners.
- Turning vanes reduce turbulence, minimizing pressure loss and cost of ownership.
- The number of vanes required is dependent upon the conduit diameter.

# P3TF Bulk Liquid Separators

- Designed in accordance with ASME and CRN
- High liquid removal efficiencies at all flow conditions
- Suitable for variable flow compressors
- Works with all types of compressor and compressor condensate
- External surface epoxy painted for maximum corrosion resistance
- 4" & 6" flange*
- Auto float drain standard, shipped loose

**P3TF Series**

| Port Size | Part Number |
|---|---|

# SPE / DRD Refrigeration Dryer Series

## SPE010 - SPE0250

- "Plug & Play" design for easy installation and operation
- Small space saving design
- High reliability, easy to use and maintain
- All models equipped standard with a digital controller
  - controls integral timed drain
  - various warning and alarms
  - on/off indicator
- Drain has access from both sides
- Non cycling dryer

## DRD325 - DRD2400

- Optimum dewpoint levels for highest system performance
- Advanced patented design solutions
- High reliability, easy to use and maintain
- Unique 4-in-1 SmartPack heat exchanger
- Integral drain
- Extremely low pressure drop design
- SmartControl energy saving function (cycling dryer)
- Excellent dewpoint performances
- Advanced compliant scroll compressor

The importance of compressed air as a provider of energy for modern industrial processes is widely known. What is often overlooked however is the need to provide quality treatment for this air.

In fact, the air entering the system contains condensate which, when cooled, will turn into liquid water, causing extensive damage not only to the compressed air network, but also to the finished product.

DRD refrigeration dryers actively remove this condensate to achieve extremely dry compressed air.

Our SmartPack heat exchanger offers minimal pressure drops and class leading performance, and significantly increases the efficiency of the whole compressed air treatment process. The innovative SmartControl function automatically and continuously adjusts dryer operation to the effective working conditions, minimizing operating costs and maximizing performances.

Compressed air purification equipment must deliver uncompromising performance and reliability while providing the right balance of air quality with the lowest cost of operation. Many manufacturers offer products for the filtration and purification of contaminated compressed air, which are often selected only upon their initial purchase cost, with little or no regard for the air quality they provide, the cost of operation throughout their life or their environmental impact. When purchasing purification equipment, delivered air quality, the overall cost of ownership and the equipment's environmental impact must always be considered.

## Smart technology: the benefits

### SmartPack heat exchanger provides less than 2 PSI pressure drop

The SmartPack (patent pending) heat exchanger features an extremely robust, all-in-one aluminum design, with no interconnecting tubing.

The geometry of the heat exchanger has been designed in order to optimize its performances. In particular, large volumes allow low air velocity through the heat exchanger section, resulting in high exchange efficiency and low pressure drops. Pressure drops are further improved thanks to the absence of interconnecting pipes through the different sections of the heat exchanger and to a straight forward path of the compressed air flow with smooth and minimum changes of flow directions.

### Smart BMS interface

- Simple BMS interface includes:
- RS485 serial card provides direct communication to Modbus. Requires no gateway or A.N.I.
- Provides visualization of dewpoint, alarm conditions and service indication
- Provides remote control of the dryer including on/off and alarm reset (depending on actual alarm)

## SmartDrain - Dual mode zero air loss drain

The drainage chamber is integrated into the heat exchanger while the valve mechanism is fitted in an easily accessible drain niche. The SmartDrain continuously adjusts itself to the actual working conditions, ensuring zero air loss and a notable reduction in system power consumption.

An innovative control system continuously monitors for fault situations. If a fault does occur, an alarm is signaled and the drain switches to conventional timed solenoid drain operation. The dual mode circuitry ensures maximum reliability.

### Smart control with SmartSave cycling

The multifunction SmartControl provides a versatile platform for user interface and SmartSave Cycling (if enabled). The innovative SmartSave (patent pending)

Cycling Control continuously monitors the demand placed on the dryer. At conditions of low demand the refrigerant compressor is cycled off to save energy. A sophisticated algorithm continuously adapts the operation of the dryer for optimum energy efficiency while minimizing the dewpoint spikes common to traditional thermal mass dryers.

### Compliant scroll compressors

These units feature Compliant Scroll compressors, offering energy savings of 20 -30% when compared with piston compressors. The ability to tolerate liquid returns coupled with 50% less moving parts render them nearly indestructible and highly reliable. Low vibration levels increase overall refrigeration circuit

## Quality Assurance / IP Rating / Pressure Vessel Approvals

Development/Manufacture ISO 9001 / ISO 14001
Ingress Protection Rating IP22 Indoor Use Only

## Product Selection and Correction Factors

Capacities are based upon: Ambient temperature - 100°F (38°C); inlet temperature - 100°F (38°C); and working pressure - 100 psig (7 bar g)

**Minimum Drying Capacity = System flow x CFIT x CFATx CFMIP**

**NOTE: Flowrate, temperatures, and pressure MUST be provided by customer.**

*Example:* 50 scfm flowrate Inlet temperature - 100°F (38°C) = 1.0
Max ambient temperature - 110°F (43°C) = 1.08
Min inlet pressure - 80°F (27°C) = 1.09

**50 (1.0) + 1.08 + 1.09 = 59, therefore, a larger 75 scfm dryer is required**

# DD10 Mini Disposable Dryer

## Mini disposable inline desiccant dryer – DD10

Used at the point-of-use, this disposable, mini inline desiccant dryer removes all traces of water vapor, oil vapor and dirt. It is often used directly upstream of blow guns or spray guns as final protection for critical parts blow off and paint spraying. Install in either direction; it functions in both directions.

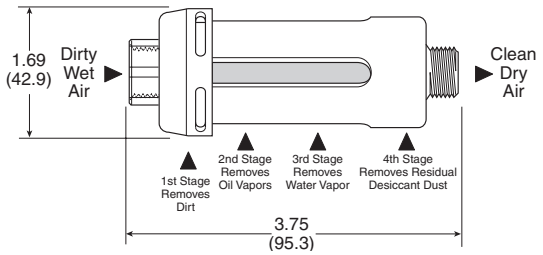
A 40 micron, porous bronze element removes fine dirt particles, an oil removing media removes oil vapor, and desiccant beads adsorb water vapor. The see-through housing shows desiccant color change from the original orange to a green color in the desiccant beads, which indicates that the dryer needs to be replaced.

### Features

- Polycarbonate material allows clear desiccant visibility
- Disposable
- Used for parts blow off
- Protection for paint guns
- Non-toxic desiccant standard
- 1/4" port (NPT)

Non-metalic material is highly resistant to chemicals.

See through housing shows color change when dryer needs replacement.



**DD10-02**

### Operating information

| | |
|---|---|
| Operating temperature:<br>Maximum | 32°F to 130°F (0°C to 54°C)<br>130°F (54°C) |
| Flow capacity: | 15 scfm (7.1 $dm^3/s$, ANR) |
| Pressure rating (max.): | 125 psig (8.6 bar) |
| Weight: | 2.8 oz (79.4 g) |

### Installation

The DD10 is equipped with a 1/4" NPT (F) and (M) ports and can be installed in either direction. When installing the filter/dryer hand tighten to a leak proof seal. Do not use any mechanical means to hold the filter/dryer and do not over torque the threads.

### Operation

1. The unique feature of the filter/dryer design allows you to visually see when it is time to install a new DD10 by observing the color change from the original orange color to a complete green color in the desiccant beads.
2. Do not attempt to clean the filter/dryer as the use of solvents, ketones, etc., will adversely affect the plastic housing.
3. Keep the hose free of snags. Extra tension on the filter/dryer assembly could break the unit at the connecting ports. To clear stuck hoses, grasp hose below the filter/dryer.

# DD Inline Desiccant Dryers

- Inline desiccant dryers are a convenient and cost effective means of ensuring your sensitive intermittent pneumatic applications are never exposed to damaging moisture
- Compact size for point-of-use applications
- Drying efficiency down to -40°F pressure dew point
- Easily and quickly serviced
- Sight glass in bowl to monitor desiccant
- Built-in particulate after filter prevents downstream dust
- No electricity needed
- Low pressure drop
- No purge air lost as with other dryer types
- Check valve required on inlet
- Desiccant must be ordered separately

## Inline Desiccant Dryers

| Port Size | Part Number scfm / desiccant Capacity [1] 15 scfm / 2.5 lb. | 30 scfm / 5 lbs. | 60 scfm / 10 lbs. |
|---|---|---|---|
| 1/4 [2] | **DD15-02** | | |
| 3/8 [2] | **DD15-03** | | |
| 1/2 [2] | **DD15-04** | **DD30-04** | **DD60-04** |
| 3/4 | **DD15-06** | **DD30-06** | **DD60-06** |
| 1 | | **DD30-08** | **DD60-08** |

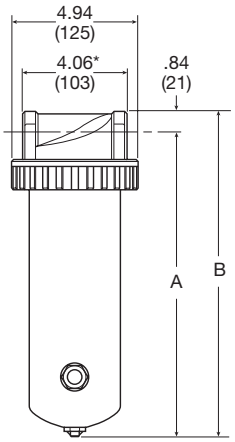
**Notes:**
1. Desiccant must be ordered separately.
2. These units supplied with reducer bushings.

## Operating information

| | |
|---|---|
| Optimum working temperature: | Below 100°F |
| Operating temperature: | 32°F to 180°F (0°C to 82°C) |
| Operating pressure (max.): | 0 to 300 psig (21 bar) |
| Filter element rating: | |
| DD15, DD30 | 90 micron |
| DD60 | 40 micron |
| Desiccant capacity: | |
| DD15 | 2.5 lb. (1.1 kg) |
| DD30 | 5 lb. (2.3 kg) |
| DD60 | 10 lb. (4.5 kg) |
| Weight: | |
| DD15 (add 2.5 lb for weight full) | 8 lb. (3.6 kg) |
| DD30 (add 5 lb for weight full) | 13 lb. (5.9 kg) |
| DD60 (add 10 lb for weight full) | 20 lb. (9.1 kg) |

## Installation tips

- Always place a moisture separator / particulate filter to remove bulk moisture and a coalescing filter to remove oil upstream of desiccant dryer. Desiccant coated with oil will not adsorb water vapor.
- Automatic drains should be used in prefilters
- A spring ball check valve should be installed at the dryer inlet to maximize the life of the desiccant.



| | A | B |
|---|---|---|
| DD15 | 12.69 (322) | 13.5 (343) |
| DD30 | 22.44 (570) | 23.25 (591) |
| DD60 | 29.44 (748) | 30.25 (768) |

* Dimension does not include reducer bushings for 1/4", 3/8", 1/2" versions.

As the wet compressed air enters through the inlet, the air travels down through the bed of desiccant which adsorb the water vapor and aerosols. The silica gel desiccant beads will reduce the humidity down to a -40°F pressure dew point. After the moisture has been removed, the dry air passes through a sintered bronze filter element (eliminating dust downstream), up the tube and out the outlet port.

As the desiccant becomes saturated with moisture, the dew point will begin to rise. This is evident when the orange silica gel desiccant beads in the sight glass change to green, indicating the need for desiccant replacement. Simply remove the flange and bowl and replace with new desiccant or regenerate saturated desiccant by heating to 275°F.

# TW Heatless Desiccant Air Dryer

Parker TW Series Heatless Desiccant Air Dryers remove water vapor from compressed air through a process known as pressure swing adsorption. Pressure dewpoints of -40°F (-40°C) standard are attained by directing the flow of saturated compressed air over a bed of desiccant.

### Features

Allen-Bradley® PLC
- Two year dryer warranty (parts and labor)
- 4 line display
- NEMA 4X enclosure
- Selectable cycles

Switching Valves
- Five year switching valve warranty from manufacturer's defects (see warranty policy)

Factory Installed Filtration
- Single point connection for system integrity
- Differential pressure gauges for element condition
- Filter drains

Regulated Purge
- Factory set
- Optimum purge regardless of operating pressure
- Repressurization circuit

### Operating information

| | |
|---|---|
| Inlet or ambient air temperature: | 50°F to 120°F (10°C to 49°C) maximum |
| Operating pressure: | 80 psig (5.5 bar) minimum |
| Working pressure: | 150 psig (10.5 bar) maximum |
| Pressure drop at rated flow: | less than 5 PSI (0.34 bar) |
| Primary voltage: | 120V/1ph/60Hz |

## **Heatless Desiccant Air Dryers,** Filtration comes with Dryer unit as standard.

## LED Din Connectors

- Easy to maintain and service
- Valve(s) may be serviced without opening electrical enclosure
- No hard wiring required
- Visual indication of valve activation
- Valve labeling

## Additional Features

- Separate tower pressure gauges
- OSHA approved mufflers with safety relief
- ASME/CRN vessels (TW101 and larger)
- Desiccant fill and drain ports
- Safety relief valves
- Stainless steel diffuser screens
- CycleLoc® demand control
- Control air line filter
- ETL listed (UL/CSA standards)
- LED din connector(s) all solenoid valves
- 120 VAC power (other options available - consult factory)
- Power cord with basic controller
- Power din connector with advanced controller
- Power On/Off switch with advanced controller
- Steel base TW1001 and larger

## Options

- PowerLoc Energy Demand Control (TW41 - TW801) optional
- All NEMA classifications
- Control air tubing - stainless steel
- Low ambient package (-20°F to +40°F air temperature)
- Instrumentation
- Locally mounted pressure and temperature gauges at inlet and outlet
- Pneumatic controls
- ASME B31.3 piping
- Corrosion allowance
- High pressure applications: 200 psig design & 250 psig design adders are available

## System Integrity

Parker TW Series Heatless Desiccant Air Dryers remove water vapor from compressed air through a process known as Pressure Swing Adsorption. Pressure dewpoints ranging from -40°F (-40°C ) are attained by directing the flow of saturated compressed air over a bed of desiccant.

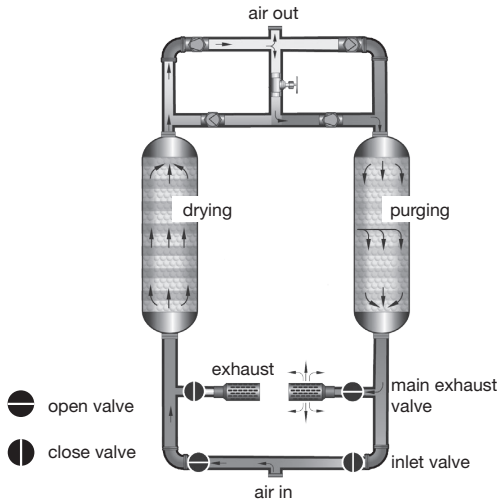
The most commonly used desiccant is activated alumina, a spherical shaped, hygroscopic material, selected for its consistent size, shape and extreme surface to mass ratio. This physically tough and chemically inert material is contained in two separate but identical pressure vessels commonly referred to as “dual” or “twin” towers.

As the saturated compressed air flows up through the “on-line” tower, its moisture content adheres to the surface of the desiccant. The dry compressed air is then discharged from the chamber into the distribution system.

An Allen-Bradley® PLC controller automatically cycles the flow of compressed air between the towers while the “on-line” tower is drying, the “off-line” tower is regenerating. Regeneration, sometimes referred to as purging, is the process by which moisture accumulated during the “on-line” cycle is stripped away during the “off-line” cycle. As dry low pressure purge air flows gently through the regenerating bed, it attracts the moisture that had accumulated on the surface of the desiccant during the drying cycle and exhausts it to the atmosphere.

To protect the desiccant bed from excess liquid, all Parker TW Series Heatless Air Dryers are designed to work with the natural pull of gravity. By directing the saturated air into the bottom of the “on-line” tower and flowing up through the bed, liquid condensate caused by system upset, is kept away from the desiccant and remains at the bottom of the tower where it can be easily exhausted during the regeneration cycle. Counter flow purging ensures optimum performance by keeping the driest desiccant at the discharge end of the dryer.

Heatless dryers in general are the most reliable and least expensive of all desiccant type dryers. Parker Airtek TW Series Heatless Desiccant Air Dryers are more energy efficient than competitors thanks to standard features such as: variable cycle control, CycleLoc® and regulated purge flow.



For inventory, lead times, and kit lookup, visit www.pdnplu.com

## Basic Controller

(Standard on Models TW41 - TW801)

- Allen-Bradley® PLC
- Nema 4X enclosure
- LCD user interface
- Four line digital display features:
  - Tower drying indication
  - Tower regenerating indication
  - Run status
  - Time remaining in cycle
- Selectable cycle settings
- Programmable drain timer (drain on, time and test)
- Compressor demand via external dry contact (CycleLoc®)
- Power ON/OFF switch
- Step-through regeneration for maintenance
- Cycle counter
- Hours of operation

## Advanced Controller

(Optional on Models TW41-801)

- Allen-Bradley® PLC
- Powerloc® Energy Demand System
  - Energy savings percentage
  - Hours in power save
- Nema 4X enclosure
- 3.5" LCD user interface
- Dew point sensor input (-148°F to 68°F)
- Optional 4-20 mA output for remotely monitoring dew point
- Tower pressure sensors
- Inlet pressure and temperature sensors
- Compressor demand via external dry contact (CycleLoc®)
- Modbus/TCP communications via standard ethernet port
- Modbus RTU communications via optional RS232/485 port (Using external gateway device)
- SD card slot for accessing historical data and alarm information
- Selectable cycle settings
- Programmable drain timer (drain on, time and test)
- User selectable alarms with common alarm relay
  - High inlet temperature
  - Low inlet pressure
  - Tower failed to blow down (switch failure)
  - Tower failed to pressurize
  - High dew point
  - Sensor failure for all sensors
  - Switch failure
  - Inlet filter pressure
- Filter maintenance timer & alarm
- Clogged muffler maintenance and alarm
- Power ON/OFF switch
- Alarm log stores most recent alarms
- Flashes green when in energy savings mode
- Flashes red when an alarm is present
- Dry contact for common alarm

## PowerLoc® Energy Management System

(Optional on Models TW41-801)**

Energy savings of up to 80% can be achieved with the proven PowerLoc® energy management system.

Regeneration requirements are dependent on flow, pressure and temperature. The PowerLoc® system allows the cost of drying compressed air to be matched exactly to your plant conditions.

PowerLoc® controls the drying cycle by continuously reacting to the loading under which the dryer is operating and minimizes the energy input required.

As dryers rarely operate at full rated capacity all of the time (eg. during shift work and periods of low demand), this energy management system can provide considerable savings.

The Advanced Controller is designed to accomodate Parker Airtek's PowerLoc Energy Management System. Flashes green when in energy saving mode.

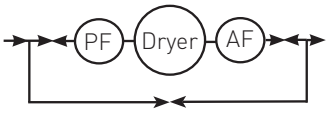
## High Performance Components

### Poppet Valve

TW41 - TW801

- Stainless steel body
- Stainless steel internals
- PTFE seal
- Air activated, spring return
- Visual position indicator on exhaust valves
- ANSI Class VI shutoff
- Long service life
- Repair kits available
- 5 year valve warranty

## Filter Package Schematic



**Package "B"**

(Standard TW41 - TW801)

Includes dryer with factory installed pre-filter and after-filter with system bypass

For inventory, lead times, and kit lookup, visit www.pdnplu.com

## Flow correction factors

Capacities are based upon:

- Maximum inlet air or ambient air temperature 120°F (49°C)
- Maximum working pressure: 150 psig (10.5 bar g) standard units for high maximum working pressure are available
- Minimum operating pressure: 80 psig (5.5 bar g)

## Correction Factors

To obtain drying capacity at new conditions: (nominal capacity) x C1 x C2

**Temperature Correction Factor**

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **Maximum inlet temperature (C1)** | **°F** | 90 | 95 | 100 | 105 | 110 | 115 | 120 |
| | **°C** | 32 | 35 | 38 | 41 | 43 | 46 | 49 |
| | **CF** | 1.17 | 1.15 | 1.00 | 0.87 | 0.76 | 0.66 | 0.58 |

**Pressure Correction Factor**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Minimum inlet pressure (C2)** | **psi g** | 80 | 90 | 100 | 110 | 120 | 130 |
| | **bar g** | 5.5 | 6.2 | 6.9 | 7.6 | 8.3 | 9.0 |
| | **CF** | 0.83 | 0.91 | 1.00 | 1.09 | 1.17 | 1.26 |

Flows are at 100 psig inlet pressure, 100°F inlet temperature, and 100°F ambient temperature.
Weight includes desiccant dryer with basic controller FLA 2 amps, advanced controller FLA 3 amps.

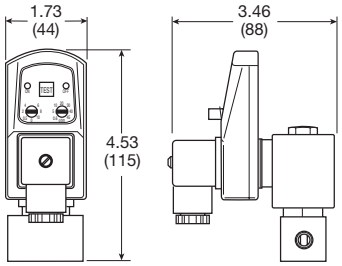
# Automatic Electrical Drain Valve – WDV3-G

The WDV3 Electrical Drain is designed to remove condensate from compressors, compressed air dryers and receivers up to any size, type or manufacturer.

## Benefits

- Does not air-lock during operation
- Compressed air systems up to any size
- The direct acting valve is serviceable
- Suitable for all types of compressors
- Test (micro-switch) feature
- High time cycle accuracy
- Large (4.5mm) valve orifice



## Operating information

| | |
|---|---|
| Operating pressure: | 230 psig (16 bar) |
| Ambient operating temperature: | 34°F to 130°F (1.1°C to 54°C) |
| Voltages: | 115VAC, 230/50-60Hz, 24VDC |
| Coil insulation: | Class H, 340°F (171.1°C) |
| Current rating: | 4mA maximum |
| Timer – | |
| Open time | .5 to 10 sec., adjustable |
| Cycle time | .5 to 45 min., adjustable |

## Material specifications

| | |
|---|---|
| **Valve body** | Brass / stainless steel |
| **Enclosure (IP65 / NEMA 4)** | ABS plastic |
| **Internal parts** | Brass / stainless steel |
| **Valve seals** | FPM (Fluorocarbon) |

## Automatic Electrical Drain Valve

| Port Size | Primary Voltage | Weight (kg) | Model Number |

# ED Zero Air Loss Condensate Drains

Zero air loss condensate drains are designed for economical removal of unwanted water, oil emulsions, and other liquids. These drains will only open when liquid is present and will not allow any compressed air to escape from the system.

## Operating information

| | |
|---|---|
| Maximum pressure: | 232 psig (16 bar) |
| Ambient operating temperature: | 35°F to 140°F (1.6°C to 60°C) |
| Voltages optional – NPT<br>BSPP ports | 115/50-60Hz, standard<br>230/50-60Hz & 24VDC |

## Zero Air Loss Condensate Drains

| Port Size (NPT) | Compressor Aftercooler (scfm)* | Capacity Refrigeration Dryer (scfm)** | Filter (scfm) | Drain Capacity per Day (gal/liter) | Model Number | Service Kit |
|---|---|---|---|---|---|---|
| 1 @ 3/8 (in), 1 @ 3/8 (out) | — | — | 424 | 6 (22.7) | **ED3002N115-K** | **SKED3000N115** |
| 1 @ 1/2 (in), 1 @ 3/8 (out) | 141 | 282 | 1,413 | 13 (49.2) | **ED3004N115-K** | **SKED3000N115** |
| 2 @ 1/2 (in), 1 @ 3/8 (out) | 247 | 494 | 2,472 | 23 (87.1) | **ED3007N115-K** | **SKED3000N115** |

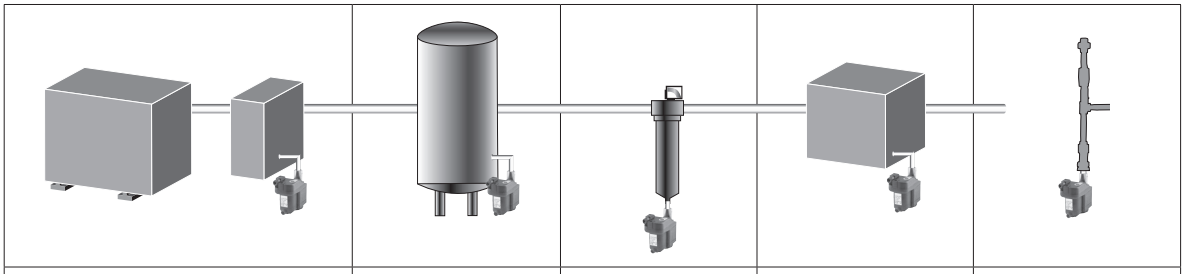
* Based on 100 PSI working pressure, air compressor inlet at 77°F (25°C) at 60% RH, air discharge temperature of 95°F (35°C) following the aftercooler, pressure dewpoint of 37°F (2.8°C) after the refrigerated dryer.

** Condensate from aftercooler or refrigerated dryer to be drained upstream – only for residual oil content or small quantities of condensate.

Note: A 6 ft. line cord will be included with each drain.

## Where Are Condensate Drains Used?



| Compressor with Aftercooler | Receiver Tank | Filter | Air Dryer | Drip Leg |
|---|---|---|---|---|
| Removes the condensate that is collected after the air cools in the aftercooler | Removes the condensate that is collected when the air cools inside of the receiver tank | Removes the condensate that is collected in the filter bowl | Removes the condensate that is collected in the air dryer | Point-of-use applications: removes the condensate from compressed air pipes in a plant |

Drain cocks are manufactured in external seats. Hand tightening provides a metal - to - metal seal.

## Drain Cock Nomenclature

**Example:**

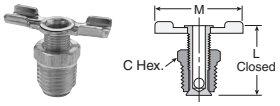
DC 604 - 2

- Drain Cock
- External Seat
- 1/8" Pipe Thread

## Operating information

| | |
|---|---|
| Operating pressure: | 150 psig (150 bar) |
| Temperature ranges: | |
| Internal seal | -65°F to 250°F (-53.9°C to 12.1°C) |
| External seal | -25°F to 250°F (-31.7°C to 12.1°C) |
| Operating fluid: | Air, water, gas and certain other fluids |

Note: Lubricant may not be compatible with some fluids, contact factory for special fluid requirements.



## External Seal - Drain Cock DC604

Temperature Range: -25° to 250°F

| Part Number | Pipe Thread | C Hex | L | M |
|---|---|---|---|---|
| **DC604-2*** | 1/8 | 7/16 | .85 | 1.25 |
| **DC604-4** | 1/4 | 9/16 | 1.00 | 1.38 |
| **DC604-6*** | 3/8 | 11/16 | 1.22 | 1.68 |

# LV / LVSS Series

Lockout valves are installed in pneumatic drop legs, or individual pneumatic control lines. In accordance with OSHA procedures, lockout valves are used during maintenance and service procedures of pneumatically (air) operated equipment.

- Used for compliance with OSHA 29 CFR part 1910
- 1/4" to 2" pipe sizes. NPT or BSPP
- Yellow cast aluminum body with red handle or stainless steel (NACE MR0175 / ISO 15156)
- Inline or surface mountable
- Built in port for pressure verification to meet ANSI B11 and PMMI B155 requirements
- Fluorocarbon slipper seals for easy shifting, even after long periods of inactivity

## Material specifications

# EZ Series

The EZ series meets all the same standards as the LV series with the added feature of a soft start when opened. There are still 2 detented positions for the handle (push close, pull to open), but when pulled open, an adjustable needle valve controls the rate of pressure build-up. This can protect equipment during start up after maintenance. The EZ is distinguishable from the LV series by the blue dot on the label.

**Features**

- Combines lockout and soft-start functions in a single unit
- Used in systems for compliance with OSHA standard 29 CFR part 1910
- 3/8 Inch to 1-1/4 inch pipe sizes
- Cv's from 3.7 to 13.7
- 3/4 and 1-1/4 inch: exhaust ports available
- Exhaust port threaded for installation of silencer or line for remote exhausting
- Inline or surface mountable
- Yellow cast aluminum body with red handle. Blue dot on body indicates EZ Series valve
- Fluorocarbon slipper seals for easy shifting, even after long periods of inactivity

## Applications

Lockout valves are installed in pneumatic drop legs, or individual pneumatic control lines (see Figure 1). In accordance with OSHA procedures, EZ valves are used during maintenance and service procedures of pneumatically (air) operated equipment. Prior to servicing, the red handle is pressed inward, blocking pressure and relieving all downstream air pressure. A padlock is installed through the locking hasp, preventing accidental actuation during the maintenance procedure. Following maintenance, the padlock is removed and the red handle is pulled outward, gradually returning air pressure to the system. (For complete Lockout / Tagout procedures, consult OSHA Standard 29 CFR Part 1910 in U.S. Federal Register/Vol. 54 No. 169, Friday, September 1, 1989 / Page 36644.)

## Mounting

Valves can be inline mounted or surface mounted using the two mounting holes provided in the valve body. Mount valves in plain view with the handle oriented for accessibility.

## Placement of Lockout Device

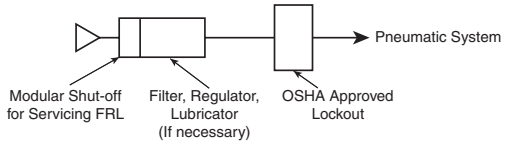

**Figure 1.**

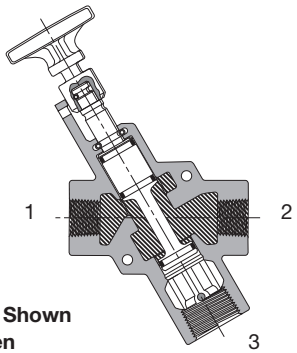
## LV / LVSS Operation

*Normal Machine Operation – Valve Open*

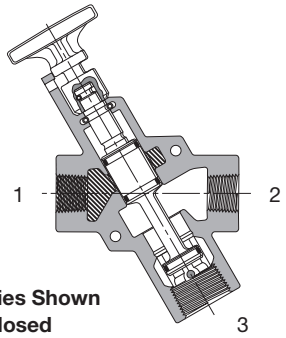
With the handle pulled outward. Inlet Port 1 is open to outlet Port 2. Exhaust Port 3 is blocked.



**LV Series Shown Open**

*Lockout Operation – Valve Closed*

With the handle pushed inward. Inlet Port 1 is blocked. Outlet Port 2 is open to Exhaust Port 3.

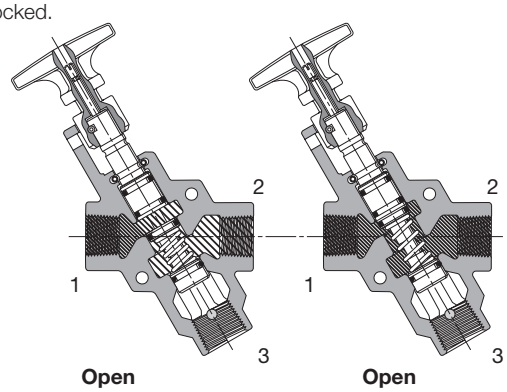


**LV Series Shown Closed**

## EZ Operation

*Normal Machine Operation – Valve Open*

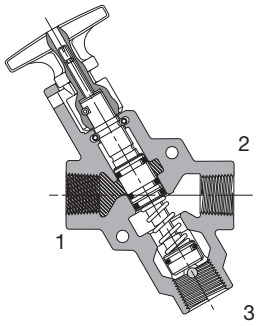
When the red handle is pulled outward, the adjustable needle valve (accessed through the top of the handle) setting determines the rate of pressure buildup. When downstream pressure reaches the full flow described in the specifications below, Inlet Port 1 is open to outlet Port 2. Exhaust Port 3 is blocked.



**Open Pressure Building Up** **Open Full Flow**

*Lockout Operation – Valve Closed*

When the red handle is pushed inward, the Inlet Port 1 is blocked. Downstream air is exhausted through Exhaust Port 3.



**Closed**

# AirGuard Protection System

## Product Features:

- **Maintenance Friendly**
  Repair possible while plant is still operating
- **Economic**
  Competitive pricing
- **Complies with EU Standard**
  EN 983 - § 5.3.4.3.2
- **Reliable and Tamperproof**
  No adjustment necessary
- **Complies with ISO Standard**
  4414 - § 5.4.5.11.1
- **Complies with MSHA Regulation**
  30CFR 56.13021, 57.13021 and 57.1730
- **Lightweight**
  Compact size
- Compatible with all Pneumatic Systems
- Can be used as a Flow Blocker
- **TUV Approval**
  No. 01-02-0145
- **EU Registered Utility**
  Model No. 0025 73 525
- **Complies with OSHA Regulation Standard**
  29CFR 1926.302 (Partial)

## Protect your most important assets: your employees and their equipment!

The AirGuard offers simple but efficient protection of a broken compressed-air hose. The air supply is immediately shut off by the AirGuard, should the volume of air exceed a set value. This “value” is factory preset and is set to allow normal air consumption when using air tools.

Should the air consumption exceeds the set value, e.g. the air line is severed, then the internal piston instantly shuts off the main flow. An integral bleed hole allows some air to flow though. This enables the line pressure to automatically reset the AirGuard once the main line break is repaired.

## Function:

(P) is the inlet. Air passes the piston (1) and continues through the seat (3). The air flow, passing the piston, is slowed down by means of length wise grooves on the outer side of the piston. If the flow is too high, the air cannot pass the piston quickly enough, and the piston is forced against the spring (2) and towards the seat. The maximum flow is shown in the graph. If the value indicated is exceeded e.g. if the hose suddenly breaks - the air supply is automatically shut of. An integral bleed hole allows some air to flow though. This enables the line pressure to automatically reset the AirGuard once the main line break is repaired.

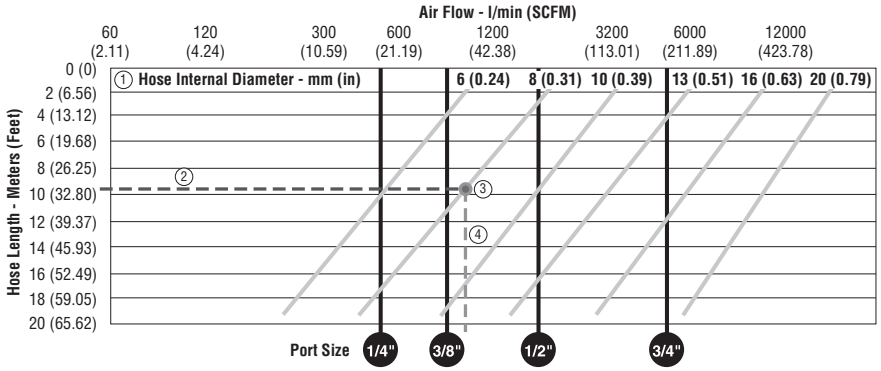
## How to Select the Optimal Size of an AirGuard

Information based on an inlet pressure of 7 bar (100 psig)



a. Determine the internal diameter of the hose, tube or pipe being used ① (see specification Hose-internal Diameter, diagonal line).
b. Determine the length of the hose, tube or pipe ② (Hose length in meters).
c. Define the intersection of point a and b, and mark a vertical line downwards. ③ - ④ In the example chart (dot ③) and the dashed line (④).
d. The next vertical black line, left of the intersection line (④) tells the correct AirGuard size (in inches).
e. Important: Every flow value to the right of the respective vertical line (black) would activate the AirGuard in case of a bursting hose, pipe or tube. All AirGuard sizes right of the intersection line (④) are too big and will not close up.
**f. Example:** Which air fuse should be used for a hose, pipe or tube bearing 8 mm inner diameter and 10 meters of length - follow the 10 meter line (②) to the intersection point (dot ③). Now the next left black line marks the correct size.
**g. Result:** The correct size in our example is the AirGuard 3/8"

## EM Series – Sintered Bronze Muffler / Filters

Muffler / filters effectively reduce air exhaust noises to an industry accepted level with minimum flow restriction. They protect valves, impact wrenches, screw drivers and other air tools by preventing dirt and other foreign matter from entering the system. Non-corrosive. Can be cleaned with many common solvents.

### EM Series

| Pipe Thread | Overall Length | Hex Size | Part Number |
|---|---|---|---|
| M5 | .75 | 5/16" | **EMM5** |
| 1/8" | 1.00 | 7/16" | **EM12** |
| 1/4" | 1.32 | 9/16" | **EM25** |
| 3/8" | 1.54 | 11/16" | **EM37** |
| 1/2" | 1.85 | 7/8" | **EM50** |
| 3/4" | 2.29 | 1-1/6" | **EM75** |
| 1" | 2.91 | 1-5/16" | **EM100** |
| 1-1/4" | 3.25 | 1-11/16" | **EM125** |
| 1-1/2" | 3.69 | 2" | **EM150** |

### Operating information

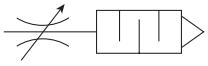
Operating pressure: 250 psig (Air)
Cracking pressure 1 to 2 psig

Operating temperature:* 0°F to 300°F

* Ambient temperatures below freezing require moisture-free air. Ambient temperatures below freezing and above 180° require lubricants especially selected for suitability at these temperatures. Pneumatic valves should be used with filtered and lubricated air.

## Muffler / Flow Controls

Muffler / flow controls provide an acceptable exhaust noise level and effectively meter exhaust. Installed in valve exhaust ports, they control cylinder piston speeds throughout a wide range. The adjusting screw cannot be accidently blown out, can be locked to maintain setting. Brass and bronze construction. Clean with commonly used solvents.



### Muffler / Flow Controls

| Pipe Thread | Overall Length | Hex Size | Part Number |
|---|---|---|---|
| 1/8" | 1.15 | 9/16" | **045020002** |
| 1/4" | 1.42 | 1/2" | **045040004** |

## Breather Vents

These low silhouette versions of the muffler / filter are useful where space is a problem and / or to prevent contamination. Use for vacuum relief or pressure equalization in gear boxes, oil tanks, reservoirs, etc. Non-corrosive.

**NOTE:** Breather vents should not be used as exhaust mufflers.

### Breather Vent

| Pipe Thread | Overall Length | Hex Size | Part Number |
|---|---|---|---|
| 1/8" | 0.44 | 7/16" | **047020002** |
| 1/4" | 0.63 | 9/16" | **047040004** |
| 3/8" | 0.75 | 11/16" | **047060006** |
| 1/2" | 0.88 | 7/8" | **047080008** |

| 1-1/4" | 1.41 | 1-11/16" | **047200020** |
| 1-1/2" | 1.50 | 2" | **047240024** |

### Operating information

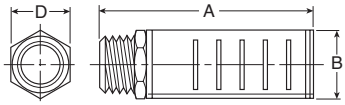
Operating pressure: 150 psig (Air) max.

Operating temperature:* 0°F to 300°F

* Ambient temperatures below freezing require moisture-free air. Ambient temperatures below freezing and above 180° require lubricants especially selected for suitability at these temperatures. Pneumatic valves should be used with filtered and lubricated air.

## ES Series – Silencer

The silencer is designed to give superior performance in noise control with a minimum effect on air efficiency. "Trimline" design allows location in the tightest places without extra plumbing and fittings. Fits directly into the exhaust port of more than 90% of present commercial valves. Slotted body permits rapid discharge of air without undesirable back pressure. Unique nylon screen element resists dirt buildup or clogging.



### Operating information

Operating pressure: 250 psig (Air) max.

Operating temperature:* 0°F to 300°F

* Ambient temperatures below freezing require moisture-free air. Ambient temperatures below freezing and above 180° require lubricants especially selected for suitability at these temperatures. Pneumatic valves should be used with filtered and lubricated air.

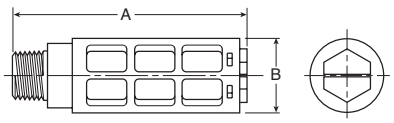
# ASN Air Line Silencer, Plastic

- Compact
- Lightweight
- Easy to Install
- Excellent Noise Reduction
- Protects Components from Contamination
- NPT and BSPT Threads Available

The plastic silencer is designed to give excellent noise reduction with a minimum effect on air efficiency. The "Trimline" design allows for locating the silencer in the tightest places without extra plumbing or fittings. Fits directly into the exhaust port of most commercial valves. Open surface area of element allows for rapid discharge of air without undesirable back pressure.



## Operating information

| | |
|---|---|
| Operating pressure: | 0 to 150 psig<br>(0 to 10 bar, 0 to 1034 kPa) |
| Operating temperature: | 14°F to 140°F (-10°C to 60°C) |

## Material Specifications

| | |
|---|---|
| Body | Acetal (Plastic) |
| Element | Polyethylene |

# ECS Reclassifier, Air Line Muffler

The ECS (Muffler-Reclassifier) eliminates unwanted oil mist and reduces exhaust noise from pneumatic valves, cylinders and air motors.

- 99.97% Oil Removal Efficiencies
- 25 dBA Noise Attenuation
- 1/2" NPT and 1" NPT
- Disposable Units
- Continuous or Plugged Drain Option
- Metal Retained Construction
- Fast Exhaust Time

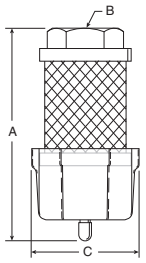
### Improve Overall Plant Environment

Exhaust oil mist and noise pollution have a direct impact on worker productivity.

Oil aerosol mist from lubricators and compressors is pervasive and enters the industrial plant environment through the exhaust ports of valves, cylinders and air motors. This rapidly expanding exhaust also produces sudden and excessive noise.

The ECS (Muffler-Reclassifier) is 99.97% efficient at removing the oil aerosols. The ECS also acts as a silencer to lower the dBA levels below O.S.H.A. requirements.

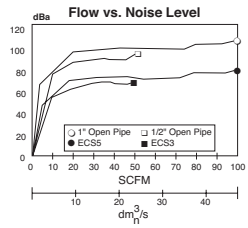
The result is a cleaner, quieter environment which equates to greater work productivity and safety.

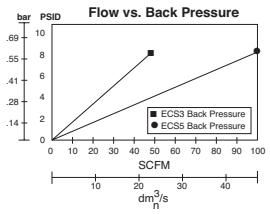


## ECS Reclassifier, Air Line Muffler

| Thread Size | A | B | C | Part Number |
|---|---|---|---|---|
| 1/2 | 5.30 (135mm) | 1/2" NPT | 2.57 (65mm) | **ECS3** |
| 1 | 7.30 (185mm) | 1" NPT | 2.57 (65mm) | **ECS5** |

### Performance Characteristics





☐ Most popular.

## Operating information

| | |
|---|---|
| Maximum line pressure: | 100 psig (6.8 bar) |
| Maximum operating temperature: | 125°F (52°C) |

### Operation

Compressor oils and lubricating oils are exhausted from valves, cylinders and air motors into the ECS. Oil aerosols are "coalesced" into larger droplets and gravity pulls them into the attached drain sump. The sump can then be drained manually or by using a 1/4" ID plastic tube drain. The air flowing into the ECS is also muffled or silenced as it enters the inside of the ECS and passes through the filter media into the atmosphere.

### Proven Technology

The ECS units are constructed from the same materials that go into our oil removal coalescing filter elements.

The seamless design insures media uniformity and strength. This proven technology provides high coalescing efficiency with low pressure drop.

The filter media is supported by cylindrical perforated steel retainers both inside and out. These retainers, fully plated for excellent corrosion resistance, give the ECS units high rupture strength in either flow direction. These filters can also be used as high efficiency inlet or bypass filters for vacuum pumps, or breather elements to protect the air above critical process liquids.

### ECS3 / ECS5

The ECS solves two problems inherent in compressed air exhaust from valves, cylinders and air motors - oil mist removal and noise abatement.

The ECS will improve your industrial plant environment, thereby improving worker productivity.

# Safety Guide For Selecting And Using Pneumatic Division Products And Related Accessories

## ⚠ WARNING:

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF PNEUMATIC DIVISION PRODUCTS, ASSEMBLIES OR RELATED ITEMS ("PRODUCTS") CAN CAUSE DEATH, PERSONAL INJURY, AND PROPERTY DAMAGE. POSSIBLE CONSEQUENCES OF FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THESE PRODUCTS INCLUDE BUT ARE NOT LIMITED TO:**

- Unintended or mistimed cycling or motion of machine members or failure to cycle
- Work pieces or component parts being thrown off at high speeds.
- Failure of a device to function properly for example, failure to clamp or unclamp an associated item or device.
- Explosion
- Suddenly moving or falling objects.
- Release of toxic or otherwise injurious liquids or gasses.

Before selecting or using any of these Products, it is important that you read and follow the instructions below.

### 1. GENERAL INSTRUCTIONS

**1.1. Scope:** This safety guide is designed to cover general guidelines on the installation, use, and maintenance of Pneumatic Division Valves, FRLs (Filters, Pressure Regulators, and Lubricators), Vacuum products and related accessory components.

**1.2. Fail-Safe:** Valves, FRLs, Vacuum products and their related components can and do fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of associated valves, FRLs or Vacuum products will not endanger persons or property.

**1.3 Relevant International Standards:** For a good guide to the application of a broad spectrum of pneumatic fluid power devices see: ISO 4414:1998, Pneumatic Fluid Power – General Rules Relating to Systems. See www.iso.org for ordering information.

**1.4. Distribution:** Provide a copy of this safety guide to each person that is responsible for selection, installation, or use of Valves, FRLs or Vacuum products. Do not select, or use Parker valves, FRLs or vacuum products without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the products considered or selected.

**1.5. User Responsibility:** Due to the wide variety of operating conditions and applications for valves, FRLs, and vacuum products Parker and its distributors do not represent or warrant that any particular valve, FRL or vacuum product is suitable for any specific end use system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the appropriate valve, FRL, Vacuum component, or accessory.
- Assuring that all user's performance, endurance, maintenance, safety, and warning requirements are met and that the application presents no health or safety hazards.
- Complying with all existing warning labels and / or providing all appropriate health and safety warnings on the equipment on which the valves, FRLs or Vacuum products are used; and,
- Assuring compliance with all applicable government and industry standards.

**1.6. Safety Devices:** Safety devices should not be removed, or defeated.

**1.7. Warning Labels:** Warning labels should not be removed, painted over or otherwise obscured.

**1.8. Additional Questions:** Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the product being considered or used, or call 1-800-CPARKER, or go to www.parker.com, for telephone numbers of the appropriate technical service department.

### 2. PRODUCT SELECTION INSTRUCTIONS

**2.1. Flow Rate:** The flow rate requirements of a system are frequently the primary consideration when designing any pneumatic system. System components need to be able to provide adequate flow and pressure for the desired application.

**2.2. Pressure Rating:** Never exceed the rated pressure of a product. Consult product labeling, Pneumatic Division catalogs or the instruction sheets supplied for maximum pressure ratings.

**2.3. Temperature Rating:** Never exceed the temperature rating of a product. Excessive heat can shorten the life expectancy of a product and result in complete product failure.

**2.4. Environment:** Many environmental conditions can affect the integrity and suitability of a product for a given application. Pneumatic Division products are designed for use in general purpose industrial applications. If these products are to be used in unusual circumstances such as direct sunlight and/or corrosive or caustic environments, such use can shorten the useful life and lead to premature failure of a product.

**2.5. Lubrication and Compressor Carryover:** Some modern synthetic oils can and will attack nitrile seals. If there is any possibility of synthetic oils or greases migrating into the pneumatic components check for compatibility with the seal materials used. Consult the factory or product literature for materials of construction.

**2.6. Polycarbonate Bowls and Sight Glasses:** To avoid potential polycarbonate bowl failures:

- Do not locate polycarbonate bowls or sight glasses in areas where they could be subject to direct sunlight, impact blow, or temperatures outside of the rated range.
- Do not expose or clean polycarbonate bowls with detergents, chlorinated hydro-carbons, keytones, esters or certain alcohols.
- Do not use polycarbonate bowls or sight glasses in air systems where compressors are lubricated with fire resistant fluids such as phosphate ester and di-ester lubricants.

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

**2.7. Chemical Compatibility:** For more information on plastic component chemical compatibility see Pneumatic Division technical bulletins Tec-3, Tec-4, and Tec-5

**2.8. Product Rupture:** Product rupture can cause death, serious personal injury, and property damage.
- Do not connect pressure regulators or other Pneumatic Division products to bottled gas cylinders.
- Do not exceed the maximum primary pressure rating of any pressure regulator or any system component.
- Consult product labeling or product literature for pressure rating limitations.

**3. PRODUCT ASSEMBLY AND INSTALLATION INSTRUCTIONS**

**3.1. Component Inspection:** Prior to assembly or installation a careful examination of the valves, FRLs or vacuum products must be performed. All components must be checked for correct style, size, and catalog number. DO NOT use any component that displays any signs of nonconformance.

**3.2. Installation Instructions:** Parker published Installation Instructions must be followed for installation of Parker valves, FRLs and vacuum components. These instructions are provided with every Parker valve or FRL sold, or by calling 1-800-CPARKER, or at www.parker.com.

**3.3. Air Supply:** The air supply or control medium supplied to Valves, FRLs and Vacuum components must be moisture-free if ambient temperature can drop below freezing

**4. VALVE AND FRL MAINTENANCE AND REPLACEMENT INSTRUCTIONS**

**4.1. Maintenance:** Even with proper selection and installation, valve, FRL and vacuum products service life may be significantly reduced without a continuing maintenance program. The severity of the application, risk potential from a component failure, and experience with any known failures in the application or in similar applications should determine the frequency of inspections and the servicing or replacement of Pneumatic Division products so that products are replaced before any failure occurs. A maintenance program must be established and followed by the user and, at minimum, must include instructions 4.2 through 4.9.

**4.2. Installation and Service Instructions:** Before attempting to service or replace any worn or damaged parts consult the appropriate Service Bulletin for the valve or FRL in question for the appropriate practices to service the unit in question. These Service and Installation Instructions are provided with every Parker valve and FRL sold, or are available by calling 1-800-CPARKER, or by accessing the Parker web site at www.parker.com.

**4.3. Lockout / Tagout Procedures:** Be sure to follow all required lockout and tagout procedures when servicing equipment. For more information see: OSHA Standard – 29 CFR, Part 1910.147, Appendix A, The Control of Hazardous Energy – (Lockout / Tagout)

**4.4. Visual Inspection:** Any of the following conditions requires immediate system shut down and replacement of worn or damaged components:
- Air leakage: Look and listen to see if there are any signs of visual damage to any of the components in the system. Leakage is an indication of worn or damaged components.
- Damaged or degraded components: Look to see if there are any visible signs of wear or component degradation.
- Kinked, crushed, or damaged hoses. Kinked hoses can result in restricted air flow and lead to unpredictable system behavior.
- Any observed improper system or component function: Immediately shut down the system and correct malfunction.
- Excessive dirt build-up: Dirt and clutter can mask potentially hazardous situations.

**Caution: Leak detection solutions should be rinsed off after use.**

**4.5. Routine Maintenance Issues:**
- Remove excessive dirt, grime and clutter from work areas.
- Make sure all required guards and shields are in place.

**4.6. Functional Test:** Before initiating automatic operation, operate the system manually to make sure all required functions operate properly and safely.

**4.7. Service or Replacement Intervals:** It is the user's responsibility to establish appropriate service intervals. Valves, FRLs and vacuum products contain components that age, harden, wear, and otherwise deteriorate over time. Environmental conditions can significantly accelerate this process. Valves, FRLs and vacuum components need to be serviced or replaced on routine intervals. Service intervals need to be established based on:
- Previous performance experiences.
- Government and / or industrial standards.
- When failures could result in unacceptable down time, equipment damage or personal injury risk.

**4.8. Servicing or Replacing of any Worn or Damaged Parts:** To avoid unpredictable system behavior that can cause death, personal injury and property damage:
- Follow all government, state and local safety and servicing practices prior to service including but not limited to all OSHA Lockout Tagout procedures (OSHA Standard – 29 CFR, Part 1910.147, Appendix A, The Control of Hazardous Energy – Lockout / Tagout).
- Disconnect electrical supply (when necessary) before installation, servicing, or conversion.
- Disconnect air supply and depressurize all air lines connected to system and Pneumatic Division products before installation, service, or conversion.
- Installation, servicing, and / or conversion of these products must be performed by knowledgeable personnel who understand how pneumatic products are to be applied.
- After installation, servicing, or conversions air and electrical supplies (when necessary) should be connected and the product tested for proper function and leakage. If audible leakage is present, or if the product does not operate properly, do not put product or system into use.
- Warnings and specifications on the product should not be covered or painted over. If masking is not possible, contact your local representative for replacement labels.

**4.9. Putting Serviced System Back into Operation:** Follow the guidelines above and all relevant Installation and Maintenance Instructions supplied with the valve FRL or vacuum component to insure proper function of the system.

Tel: +45 63 12 83 00 | Email: ps@hymatik.com | www.hymatik.com | Hvidkaervej 27a, DK-5250 Odense SV, Denmark

**PARKER-HANNIFIN CORPORATION**
**OFFER OF SALE**

**1. Definitions**. As used herein, the following terms have the meanings indicated.

| | |
|---|---|
| Buyer: | means any customer receiving a Quote for Products. |
| Goods: | means any tangible part, system or component to be supplied by Seller. |
| Products: | means the Goods, Services and/or Software as described in a Quote. |
| Quote: | means the offer or proposal made by Seller to Buyer for the supply of Products. |
| Seller: | means Parker-Hannifin Corporation, including all divisions and businesses thereof. |
| Services: | means any services to be provided by Seller. |
| Software: | means any software related to the Goods, whether embedded or separately downloaded. |
| Terms: | means the terms and conditions of this Offer of Sale. |

**2. Terms.** All sales of Products by Seller are expressly conditioned upon, and will be governed by the acceptance of, these Terms. These Terms are incorporated into any Quote provided by Seller to Buyer. Buyer's order for any Products whether communicated to Seller verbally, in writing, by electronic data interface or other electronic commerce, shall constitute acceptance of these Terms. Seller objects to any contrary or additional terms or conditions of Buyer. Reference in Seller's order acknowledgement to Buyer's purchase order or purchase order number shall in no way constitute an acceptance of any of Buyer's terms or conditions of purchase. No modification to these Terms will be binding on Seller unless agreed to in writing and signed by an authorized representative of Seller.

**3. Price; Payment.** The Products set forth in the Quote are offered for sale at the prices indicated in the Quote. Unless otherwise specifically stated in the Quote, prices are valid for thirty (30) days and do not include any sales, use, or other taxes or duties. Seller reserves the right to modify prices at any time to adjust for any raw material price fluctuations. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2020). All sales are contingent upon credit approval and full payment for all purchases is due thirty (30) days from the date of invoice (or such date as may be specified in the Quote). Unpaid invoices beyond the specified payment date incur interest at the rate of 1.5% per month or the maximum allowable rate under applicable law.

**4. Shipment; Delivery; Title and Risk of Loss.** All delivery dates are approximate, and Seller is not responsible for damages resulting from any delay. Regardless of the manner of shipment, delivery occurs and title and risk of loss or damage pass to Buyer, upon placement of the Products with the carrier at Seller's facility. Unless otherwise agreed prior to shipment and for domestic delivery locations only, Seller will select and arrange, at Buyer's sole expense, the carrier and means of delivery. When Seller selects and arranges the carrier and means of delivery, freight and insurance costs for shipment to the designated delivery location will be prepaid by Seller and added as a separate line item to the invoice. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions. Buyer shall not return or repackage any Products without the prior written authorization from Seller, and any return shall be at the sole cost and expense of Buyer.

**5. Warranty.** The warranty for the Products is as follows: (i) Goods are warranted against defects in material or workmanship for a period of twelve (12) months from the date of delivery or 2,000 hours of use, whichever occurs first; (ii) Services shall be performed in accordance with generally accepted practices and using the degree of care and skill that is ordinarily exercised and customary in the field to which the Services pertain and are warranted for a period of six (6) months from the date of completion of the Services; and (iii) Software is only warranted to perform in accordance with applicable specifications provided by Seller to Buyer for ninety (90) days from the date of delivery or, when downloaded by a Buyer or end-user, from the date of the initial download. All prices are based upon the exclusive limited warranty stated above, and upon the following disclaimer: **EXEMPTION CLAUSE; DISCLAIMER OF WARRANTY, CONDITIONS, REPRESENTATIONS: THIS WARRANTY IS THE SOLE AND ENTIRE WARRANTY, CONDITION, AND REPRESENTATION, PERTAINING TO PRODUCTS. SELLER DISCLAIMS ALL OTHER WARRANTIES, CONDITIONS, AND REPRESENTATIONS, WHETHER STATUTORY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THOSE RELATING TO DESIGN, NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE. SELLER DOES NOT WARRANT THAT THE SOFTWARE IS ERROR-FREE OR FAULT-TOLERANT, OR THAT BUYER'S USE THEREOF WILL BE SECURE OR UNINTERRUPTED. UNLESS OTHERWISE AUTHORIZED IN WRITING BY SELLER, THE SOFTWARE SHALL NOT BE USED IN CONNECTION WITH HAZARDOUS OR HIGH RISK ACTIVITIES OR ENVIRONMENTS. EXCEPT AS EXPRESSLY STATED HEREIN, ALL PRODUCTS ARE PROVIDED "AS IS".**

**6. Claims; Commencement of Actions.** Buyer shall promptly inspect all Products upon receipt. No claims for shortages will be allowed unless reported to Seller within ten (10) days of delivery. Buyer shall notify Seller of any alleged breach of warranty within thirty (30) days after the date the non-conformance is or should have been discovered by Buyer. Any claim or action against Seller based upon breach of contract or any other theory, including tort, negligence, or otherwise must be commenced within twelve (12) months from the date of the alleged breach or other alleged event, without regard to the date of discovery.

**7. LIMITATION OF LIABILITY.** IN THE EVENT OF A BREACH OF WARRANTY, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE THE NON-CONFORMING PRODUCT, RE-PERFORM THE SERVICES, OR REFUND THE PURCHASE PRICE PAID WITHIN A REASONABLE PERIOD OF TIME. **IN NO EVENT IS SELLER LIABLE FOR**

**ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES INCLUDING ANY LOSS OF REVENUE OR PROFITS, WHETHER BASED IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE PAID FOR THE PRODUCTS.**

**8. Confidential Information.** Buyer acknowledges and agrees that any technical, commercial, or other confidential information of Seller, including, without limitation, pricing, technical drawings or prints and/or part lists, which has been or will be disclosed, delivered or made available, whether directly or indirectly, to Buyer ("Confidential Information"), has been and will be received in confidence and will remain the property of Seller. Buyer further agrees that it will not use Seller's Confidential Information for any purpose other than for the benefit of Seller.

**9. Loss to Buyer's Property.** Any tools, patterns, materials, equipment or information furnished by Buyer or which are or become Buyer's property ("Buyer's Property"), will be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer ordering the Products manufactured using Buyer's Property. Furthermore, Seller shall not be responsible for any loss or damage to Buyer's Property while it is in Seller's possession or control.

**10. Special Tooling.** "Special Tooling" includes but is not limited to tools, jigs, fixtures and associated manufacturing equipment acquired or necessary to manufacture Goods. Seller may impose a tooling charge for any Special Tooling. Such Special Tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in the Special Tooling, even if such Special Tooling has been specially converted or adapted for manufacture of Goods for Buyer and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller has the right to alter, discard or otherwise dispose of any Special Tooling or other property owned by Seller in its sole discretion at any time.

**11. Security Interest.** To secure payment of all sums due from Buyer, Seller retains a security interest in all Products delivered to Buyer and, Buyer's acceptance of these Terms is deemed to be a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect Seller's security interest.

**12. User Responsibility.** Buyer, through its own analysis and testing, is solely responsible for making the final selection of the Products and assuring that all performance, endurance, maintenance, safety and warning requirements of the application of the Products are met. Buyer must analyze all aspects of the application and follow applicable industry standards, specifications, and any technical information provided with the Quote or the Products, such as Seller's instructions, guides and specifications. If Seller provides options of or for Products based upon data or specifications provided by Buyer, Buyer is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products. In the event Buyer is not the end-user of the Products, Buyer will ensure such end-user complies with this paragraph.

**13. Use of Products, Indemnity by Buyer.** Buyer shall comply with all instructions, guides and specifications provided by Seller with the Quote or the Products. **Unauthorized Uses**. If Buyer uses or resells the Products in any way prohibited by Seller's instructions, guides or specifications, or Buyer otherwise fails to comply with Seller's instructions, guides and specifications, Buyer acknowledges that any such use, resale, or non-compliance is at Buyer's sole risk. Further, Buyer shall indemnify, defend, and hold Seller harmless from any losses, claims, liabilities, damages, lawsuits, judgments and costs (including attorney fees and defense costs), whether for personal injury, property damage, intellectual property infringement or any other claim, arising out of or in connection with: (a) improper selection, design, specification, application, or any misuse of Products; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, tools, equipment, plans, drawings, designs, specifications or other information or things furnished by Buyer; (d) damage to the Products from an external cause, repair or attempted repair by anyone other than Seller, failure to follow instructions, guides and specifications provided by Seller, use with goods not provided by Seller, or opening, modifying, deconstructing, tampering with or repackaging the Products; or (e) Buyer's failure to comply with these Terms. Seller shall not indemnify Buyer under any circumstance except as otherwise provided in these Terms.

**14. Cancellations and Changes.** Buyer may not cancel or modify, including but not limited to movement of delivery dates for the Products, any order for any reason except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage and any additional expense. Seller, at any time, may change features, specifications, designs and availability of Products.

**15. Limitation on Assignment.** Buyer may not assign its rights or obligations without the prior written consent of Seller.

**16. Force Majeure.** Seller is not liable for delay or failure to perform any of its obligations by reason of events or circumstances beyond its reasonable control. Such circumstances include without limitation: accidents, labor disputes or stoppages, government acts or orders, acts of nature, pandemics, epidemics, other widespread illness, or public health emergency, delays or failures in delivery from carriers or suppliers, shortages of materials, war (whether declared or not) or the serious threat of same, riots, rebellions, acts of terrorism, fire or any reason whether similar to the foregoing or otherwise. Seller will resume performance as soon as practicable after the event of force majeure has been removed. All delivery dates affected by force majeure shall be tolled for the duration of such force majeure and rescheduled for mutually agreed dates as soon as practicable after the force majeure condition ceases to exist. Force majeure shall not include financial distress, insolvency, bankruptcy, or other similar conditions affecting one of the parties, affiliates and/or sub-contractors.

**17. Waiver and Severability.** Failure to enforce any provision of these Terms will not invalidate that provision; nor will any such failure prejudice either party's right to enforce that provision in the future. Invalidation of any provision of these Terms shall not invalidate any other provision herein and, the remaining provisions will remain in full force and effect.

**18. Termination.** Seller may terminate any agreement governed by or arising from these Terms for any reason and at any time by giving Buyer thirty (30) days prior written notice. Seller may immediately terminate, in writing, if Buyer: (a) breaches any provision of these Terms, (b) becomes or is deemed insolvent, (c) appoints or has appointed a trustee, receiver or custodian for all or any part of Buyer's property, (d) files a petition for relief in bankruptcy on its own behalf, or one is filed against Buyer by a third party, (e) makes an assignment for the benefit of creditors; or (f) dissolves its business or liquidates all or a majority of its assets.

**19. Ownership of Software.** Seller retains ownership of all Software supplied to Buyer hereunder. In no event shall Buyer obtain any greater right in and to the Software than a right in the nature of a license limited to the use thereof and subject to compliance with any other terms provided with the Software.

**20. Indemnity for Infringement of Intellectual Property Rights.** Seller is not liable for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights ("Intellectual Property Rights") except as provided in this Section. Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on a third party claim that one or more of the Products sold hereunder infringes the Intellectual Property Rights of a third party in the country of delivery of the Products by Seller to Buyer. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of any such claim, and Seller having sole control over the defense of the claim including all negotiations for settlement or compromise. If one or more Products sold hereunder is subject to such a claim, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Products, replace or modify the Products so as to render them non-infringing, or offer to accept return of the Products and refund the purchase price less a reasonable allowance for depreciation. Seller has no obligation or liability for any claim of infringement: (i) arising from information provided by Buyer; or (ii) directed to any Products provided hereunder for which the designs are specified in whole or part by Buyer; or (iii) resulting from the modification, combination or use in a system of any Products provided hereunder. The foregoing provisions of this Section constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for claims of infringement of Intellectual Property Rights.

**21. Governing Law.** These Terms and the sale and delivery of all Products are deemed to have taken place in, and shall be governed and construed in accordance with, the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to the sale and delivery of the Products.

**22. Entire Agreement.** These Terms, along with the terms set forth in the main body of any Quote, forms the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale and purchase. In the event of a conflict between any term set forth in the main body of a Quote and these Terms, the terms set forth in the main body of the Quote shall prevail. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter shall have no effect. These Terms may not be modified unless in writing and signed by an authorized representative of Seller.

**23. Compliance with Laws.** Buyer agrees to comply with all applicable laws, regulations, and industry and professional standards, including those of the United States of America, and the country or countries in which Buyer may operate, including without limitation the U.S. Foreign Corrupt Practices Act ("FCPA"), the U.S. Anti-Kickback Act ("Anti-Kickback Act"), U.S. and E.U. export control and sanctions laws ("Export Laws"), the U.S. Food Drug and Cosmetic Act ("FDCA"), and the rules and regulations promulgated by the U.S. Food and Drug Administration ("FDA"), each as currently amended. Buyer agrees to indemnify, defend, and hold harmless Seller from the consequences of any violation of such laws, regulations and standards by Buyer, its employees or agents. Buyer acknowledges that it is familiar with all applicable provisions of the FCPA, the Anti-Kickback Act, Export Laws, the FDCA and the FDA and certifies that Buyer will adhere to the requirements thereof and not take any action that would make Seller violate such requirements. Buyer represents and agrees that Buyer will not make any payment or give anything of value, directly or indirectly, to any governmental official, foreign political party or official thereof, candidate for foreign political office, or commercial entity or person, for any improper purpose, including the purpose of influencing such person to purchase Products or otherwise benefit the business of Seller. Buyer further represents and agrees that it will not receive, use, service, transfer or ship any Products from Seller in a manner or for a purpose that violates Export Laws or would cause Seller to be in violation of Export Laws. Buyer agrees to promptly and reliably provide Seller all requested information or documents, including end-user statements and other written assurances, concerning Buyer's ongoing compliance with Export Laws.
