

Heavy Duty 360°

New Generation Ball Bearing Rotary Fittings

ENGINEERING YOUR SUCCESS.

Customer requirements!

Standard rotary fittings are used to connect a fixed moving machine part via hoses. More and more terrains, hard climate conditions and poor infrastructure last years our customers have new challenging requirements in terms of pressure resistance and general operating for a new standard.

The solution!

Parker HPCE created for these challenging conditions a new robust version of the series. The combination of the proven design and sealing concept lead to major improvements in terms of pressure, temperature resistance and corrosion resistance.

Heavy Duty 360° can now work at a nominal pressure of 420 bar. The new sealing unit is special designed for long-time best sealing performance in combination with low-temperature suitability so that the function of the rotary fitting is still guaranteed at an ambient and medium temperature between -40°C and up to 95°C. By the new design it was possible to decrease the tilt tendency which protects all internal components is prevented.

The new design and the reduced friction resistance showed in the final approval tests a very good durability of all components without any considerable wear at 420 bar nominal pressure. The new design will replace the current portfolio of rotary fittings (DG101, DG102, etc.). The dimensions are the same so that they can easily be replaced in their current application. The portfolio of plain bearing rotary fittings (DVGE, DVWE) will remain the same.

point to a swinging, rotating or customers have to deal with rough structure in some cases. During the requirements in terms of flow capacity conditions so that there was a need

ing conditions a new robust version of series. The combination of the proven and design and sealing concept lead to major temperature and corrosion resistance

nominal pressure of 420 bar. for long-time best sealing performance suitability so that at an ambient and medium temperature between -40°C and up to 95°C. By the new design it was possible to decrease the tilt tendency which protects all internal components is prevented.

showed in the final approval tests a very good durability of all components without any considerable wear at 420 bar nominal pressure.

of Parker ball bearing versions of the old and the new can easily be replaced in their current application. The portfolio of plain bearing rotary fittings will remain the same.

Key facts

Features

- New sealing concept (Fitting dimensions unchanged)
- Working pressure up to 420 bar PN
- Temp. range: -40°C up to +95°C
- Size 06 - 38 // DN 04 - 26
- 24° DIN portfolio - SAE on request
- Improved corrosion resistance
- Improved media resistance

Customer Value

- Avoidance of torsion
- Avoidance of narrow bend radii for hose assemblies
- Longer lifetime of hydraulic system
- Avoidance of downtime
- More design flexibility of hydraulic system

Application

- Mobile hydraulics
- Machine construction
- Maintenance and repair
- Industrial Equipment
- **Or generally wherever a hose assembly must be connected to a machine part which itself rotates**

ENGINEERING YOUR SUCCESS.

Applications

Mobile Cranes

- e.g. at the boom of mobile cranes or maritime cranes

Construction Equipment

- e.g. to connect the excavator final drive/ travel motor and the valve block and for rotatable or swivelling driver's seat

Trains

- e.g. at the transition from the bogie to the wagon

Trucks

- e.g. for construction trucks at the crane pillar at the transition to the loading crane

Agriculture

- e.g. at the boom or head for mobile forestry machines like harvester or skidder

Forestry

Machine Tools

- e.g. at the milling head or milling spindle or at the basket changer for changing the tools

Technical Data Sheet

Number of revolutions and starting torques

Tube OD	Nominal Diameter DN mm	Permissible number of rev. (rpm.) for HD360 rotary fittings under a working pressure of							Initial torque at 250 bar/ Nm
		25 bar	64 bar	100 bar	160 bar	250 bar	350 bar	420 bar	
6	5.0	1.600	800	400	200	150	90	90	max. 0.5
8									
12	9.5	1.000	600	300	180	120	90	90	max. 3.0
16									
20	16.0	500	250	120	60	40	20	20	max. 3.5
25									
30	26.0	300	150	100	50	20	10	10	max. 5.0
38									

■ Application:

Connecting a fixed point to a rotating, swinging or moving machine part via hoses.
To prevent torsion and to avoid small hose radii.

■ Flow media:

Hydraulic oils and lubricants on mineral oil base and for hydraulic fluids HETG and HEES.
Also for pneumatic applications and gases.
Not suitable for corrosive and HFC-fluids.

■ Surface:

Cr(VI)-free

■ Assembly instructions:

The life of a rotary fitting depends considerably on a stress-free line connection.
Therefore the direct connection with tubes is to be avoided.
For connection of hoses the use of swivel nut fittings (DIN 3865) is recommended.
We recommend short, straight hose lines (free hose length approx. 5x hose O.D.)
Thus shocks, vibrations etc. are absorbed.

■ Flow rate

Recommended flow rate up to 8 m/s. Higher value possible according to the individual application.
