## QAC Series

Quiet Air Oil Cooler with AC motor for Industrial Applications

ENGINEERING YOUR SUCCESS.

## Air Oil Cooler Range

As a global player specializing in innovative, efficient system solutions for temperature optimization and energy storage, Parker's products are used for the most diverse environments and applications all over the world.

In hydraulic systems energy is transformed and transmitted. During this process, efficiency losses occur, i.e. mechanical and hydraulic energy is converted into heat. It is the purpose of the cooler to dissipate this heat and to maintain the thermal balance of the hydraulic fluid.

Parker's high performance coolers are equipped with axial fans and IE3 class motors, ensuring your hydraulic system's peak performance.

See Parker's extensive series of air oil coolers for all requirements on our website.

## Why Cooling

Choosing the right cooler requires precise system sizing. The most reliable way to size a cooler is with the aid of our calculation program. This program, together with precise evaluations from our experienced, skilled engineers, gives you the opportunity for more cooling per \$ invested.

### Overheating - an expensive problem

An underestimated cooling capacity produces a temperature that is too high. The consequences are poor lubricating properties, higher internal leakage, a higher risk of cavitation, damaged components, etc.

Overheating leads to a significant drop in efficiency which can be detrimental to our environment.

### Temperature optimization - a basic prerequisite for cost-efficient operation

Temperature balance in a hydraulic system occurs when the cooler can cool down the energy input that the system does not consume - the system's lost energy.

Temperature optimization occurs at the temperature at which the oil viscosity is maintained at recommended values.

## New QAC Series for better Performance

The new QAC series sets new standards - but not only in terms of performance. The sound pressure level of the cooler series also sets new standards in noise emission. This means that the coolers can be used in sensitive areas and meet the requirements of noise regulations without the need for additional measures.

The series comes in a wide range of sizes (33 to 113), contact the [Parker support team](#) for further assistance.

The QAC series is suitable for Industrial applications in the following sectors:

- Power Units
- Lubrication Systems
- Cranes – Lift Equipment
- Presses
- Wind Power
- General Machinery

Single piece design  
-reduced components for easy maintenance

Updated fan guard  
- new design improves noise level

Uncompromised cooling capacity

IE 3 motor  
- for high efficiency

One piece fan guard –  
motor bracket with reduced  
air resistance

Zero air recirculation design  
- maximises directional air flow

fan blade profile  
for quieter operation

Mounting feet for fixation

## **QAC Series**

### **Quiet Air Oil Cooler with AC Motor**

The Quiet Air Oil Cooler (QAC) series is engineered for industrial applications, providing cooling capacity up to 160 kW and offers the lowest noise levels available on the market. This new air cooler range has an improved design which is optimized to significantly reduce noise levels making it more suitable for installation close to operatives and could help noise level regulations be met.

#### **YOUR EXPECTATIONS**

- Temperature regulation for hydraulic systems
- Conforming to legal requirements for noise
- Energy efficient motors
- Effective cooling capacity
- Low maintenance
- Reliability

#### **OUR TECHNOLOGY**

- An efficient, quiet and cost saving cooling solution
- Low noise (65 to 82 dB(A)) depending on size
- Cooling capacity up to 4.25 kW/C°
- High efficiency IE3 AC motors
- Advancement of existing LAC cooler series
- Interchangeability with existing system

The new **QAC Series** combines high-performance, efficient fluid cooling with the lowest noise level on the European Market.

## YOUR VALUE

- Cooling capacity up to 160 kW
- The hydraulic system's useful life is extended
- The oil's useful life is extended
- The hydraulic system's availability increases – more operating time and fewer shutdowns
- Service and repair costs are reduced
- High efficiency level preserved in continuous operation
- Maximum static operating pressure 21 bar
- Conforms to ISO 12100, ISO 4413, ISO 13857
- Compliant to directive 2006/42/EC Safety Machinery
- REACH & RoHS compliant

The new cooler range has an improved design, which is optimised to significantly reduce noise levels. This makes the units suitable for installation close to operators and can help noise level regulations be met.

All cooler sizes are available with high efficiency IE3 AC motors making them a cost-effective cooling solution for industrial hydraulic systems.

The QAC Cooler is the optimization of the LAC Series - combining its proven performance and reliability with a series of improvements. Service and repair costs are reduced.

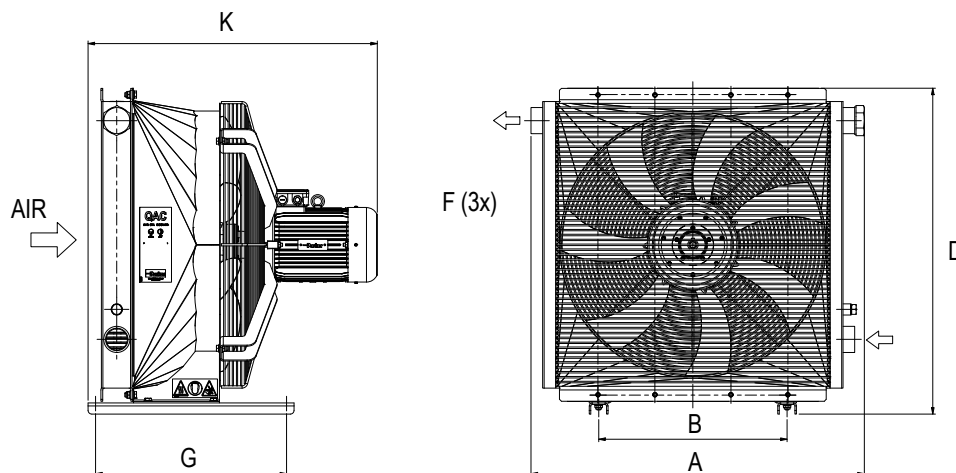

Parker offers a complete cooler and accessories range with a wide selection of cooling capacities and sizes to suit every hydraulic system.

## Technical Data and Dimensions

Part Number	Type	Size	Motor Type Asynchronous Motor	Motor Output (kW)	Maximum Cooling Capacity (kW/°C)	*Noise Level (dB(A))	A (mm)	B (mm)	D (mm)	F Port Size (inch)	G (mm)	K (mm)	Weight (kg)

\* Sound Pressure Level dB(A) measured according to ISO 3743-1.

Noise levels should be used as reference only. Noise values are affected by room properties like size, walls and surrounding equipment.

Max static pressure:	21 bar
Max Dynamic pressure:	14 bar**
Standard Voltage:	230/400V (±5 %), 50 Hz 265/460V (±5 %), 60 Hz
Fluid Type:	Mineral Oil (HL/HLP) or Water Glycol (HFC)
Standard Colour:	Jet Black (RAL 9005)

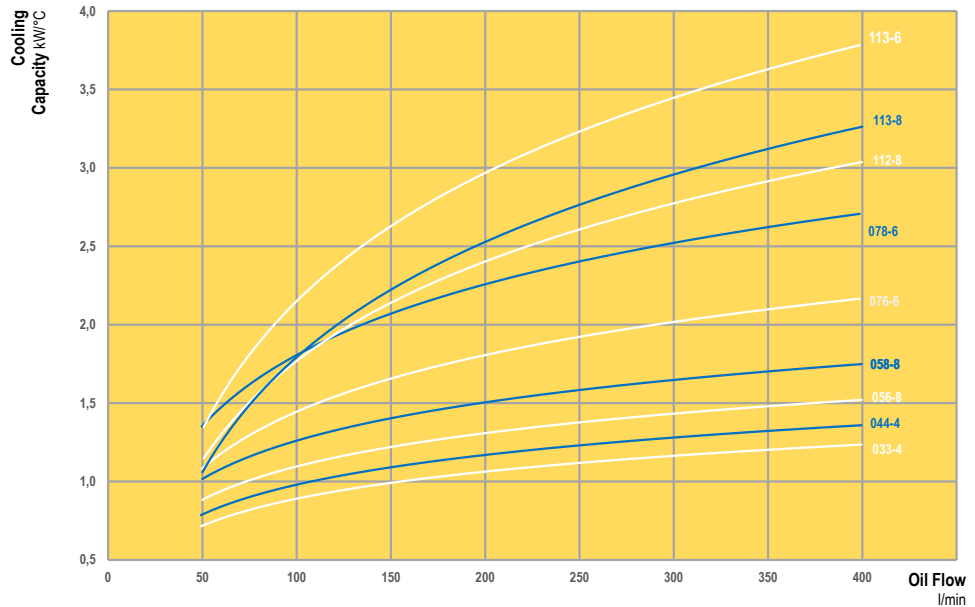

Parker offer an extensive range of options therefore please contact your local Parker sales company for any other requirements.

\*\* Tested in accordance with ISO/DIS 10771-1

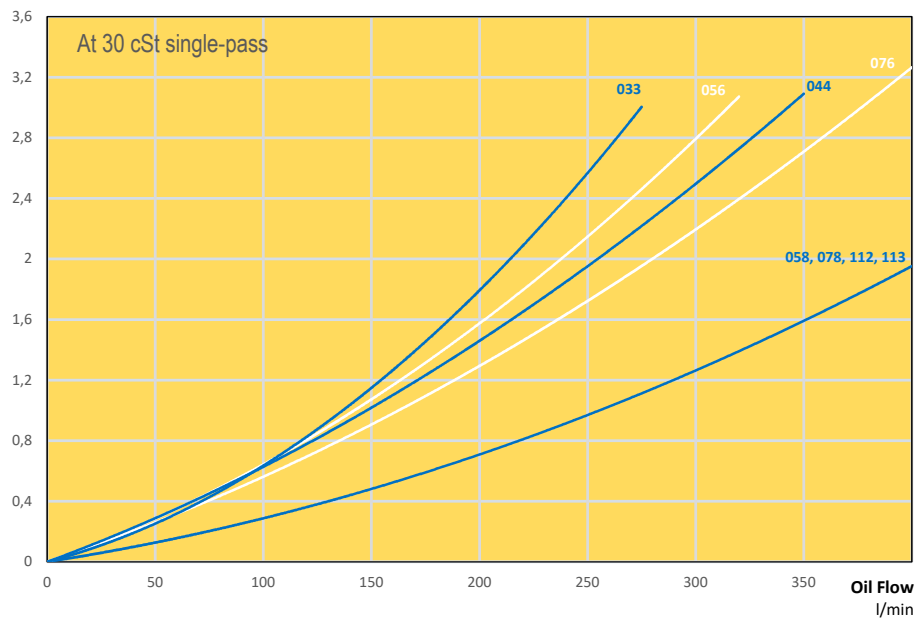

# Cooling Capacity

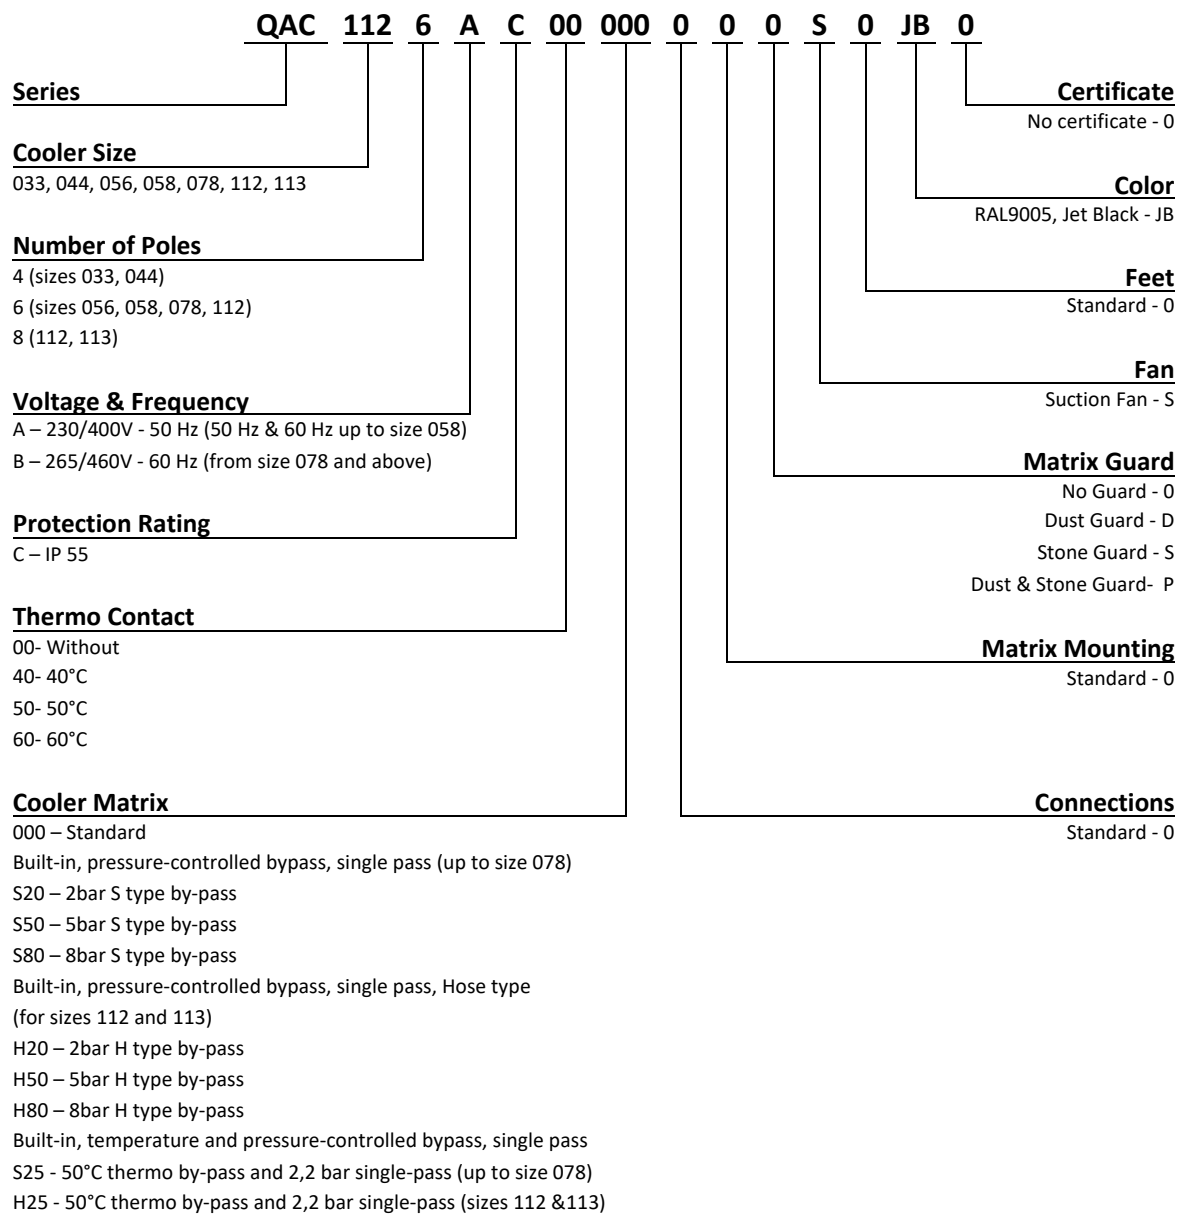

The cooling capacity curves are based on the inlet oil temperature and the ambient air temperature. An oil temperature of 60°C and an air temperature of 20°C produce a temperature difference of 40°C. Multiply by kW/°C for total cooling capacity according to the European Standard EN 1048:1998.

# Pressure Drop

# QAC Code de commande

## How to size a Cooler

More Cooling per €  
with precise calculations and our engineers' support

Optimal sizing produces efficient cooling. Correct sizing requires knowledge and experience. Our calculation program, combined with our engineers' support, gives you access to this very knowledge and experience. The result is more cooling per € invested. The user-friendly calculation program can be downloaded from [www.parker.com/acde](http://www.parker.com/acde).

### Valuable system review into the bargain

A more wide-ranging review of the hydraulic system is often a natural element of cooling calculations. Other potential system improvements can then be discussed – e.g. filtering, offline or online cooling, etc. Contact us for further guidance and information.

### Parker Hannifin's quality and performance guarantee insurance for your operations and systems

A constant striving towards more cost-efficient and environment friendly hydraulic systems requires continuous development. Areas where we are continuously seeking to improve performance include cooling capacity, noise level, pressure drop and fatigue. Meticulous quality and performance tests are conducted in our laboratory. All tests and measurements take place in accordance with standardised methods - cooling capacity in accordance with EN1048, noise level ISO 3743, pressure drop EN 1048 and fatigue ISO 10771-1.

## Sizing Questionnaires

Customers can complete a sizing questionnaire and send this to the local Parker Sales Office so that the most efficient cooler can be sized for your application.

You can download the sizing questionnaire for your air oil cooler from our website or click on the link below if you are viewing a digital version of this document.

sizing software

## Take the Next Step

- choose the right accessories

Supplementing a hydraulic system with a cooler, cooler accessories and an accumulator gives you increased availability and a longer useful life, as well as lower service and repair costs.

All applications and operating environments are unique. A well-planned choice of the following accessories can thus further improve your hydraulic system.

Please contact Parker Hannifin for guidance and information.

With our specialist expertise, industry knowledge and advanced technology, we can offer a range of different solutions for coolers and accessories to meet your requirements.

### Lifting eyes - included as standard

For safe and simple handling during installation and relocation - only used for installation and maintenance

### Thermo contact

Sensor with fixed set point, for temperature warnings. Can be used for more cost-efficient operation and better environmental consideration through the automatic control of the fan motor, either on or off.

### Stone guard/Dust guard

In dirty environments a dust guard prevents the matrix from getting clogged by medium and large size particles or chips and allows easier maintenance. The Stone guard protects the matrix from damage by projectiles. When shielded, the cooler is protected in the toughest conditions and the risk of unscheduled maintenance is reduced to a minimum.

### Temperature-controlled bypass valve integrated

Allows the oil to bypass the cooler matrix if the pressure drop is higher than 2,2 bar or less than the chosen temperature. The bypass closes when the oil temperature increases. Different closing temperatures available. Available for singlepass or two-pass matrix design

## Online Support

[www.parker.com/acde](http://www.parker.com/acde)

You can find the latest product information on the Parker website, [parker.com/acde](http://parker.com/acde). Designed to be accessible via desktops, tablets and smart phones you can download cooler sizing software, brochures, manuals and 3D models. All of the latest product news and contact information is also included on the website.

## Parker Tracking System (PTS)

<p><b>Asset Location</b> Establish detailed location data for fast and easy replacement.</p>	<p><b>Transfer Records</b> Seamlessly transfer record visibility between multiple PTS accounts.</p>
<p><b>Asset Inspection</b> Collecting and storing customizable asset inspection data for easy retrieval.</p>	<p><b>Export Details</b> Quickly export customizable asset reports into Microsoft Excel.</p>
<p><b>Scheduled Events</b> Easily schedule and manage future inspection and replacement dates.</p>	<p><b>Databooks</b> Create professional PDF reports containing asset details, service history and attached files.</p>
<p><b>Registration</b> Register PTS tagged products from our Mobile App.</p>	<p><b>Digital Documents</b> Publish and access a variety of digital documentation.</p>
<p><b>Asset Genealogy</b> Capture and analyze asset replacement and service history for continuous improvement.</p>	<p><b>Email Notifications</b> Receive personal Maintenance, Repair and Operations [MRO] email notifications.</p>
