Introduction

Parker Autoclave Engineers has always been a large user of Air-over-Liquid pump technology and has a lifetime of experience using all variety of pumps in many different configurations. We have used this experience to develop a best-in-breed line of air-driven, high pressure pumps that are efficient to operate, simple in design, and will stand the test of time. Compared to other types of hydraulic pumps, they provide cost effective and energy saving benefits for many applications in the Oil and Gas, Chemical, Industrial and Research industries.

These pumps convert simple air pressure into high and ultra-high liquid pressures by utilizing a large area piston on the air side to move a small area plunger to compress the liquid into very high hydraulic pressures - as high as 60,000 psi (4137 bar). Some designs are for economy, some for manual use, some for low-flow & high pressure, some for high flow & medium pressure. Pumps like these are perfect for product testing, valve actuation, chemical injection and other applications that require intense pressure. When used in conjunction with a Hydraulic Intensifier (another PAE product) pressures to 150,000 psi (10,000 bar) are normal.

Parker Autoclave Engineers has been making pressure and corrosion test systems as well as high pressure laboratory reaction vessels for over 70 years.

Pump Series Models

ASL Series:

- Standard Liquid Pump
- Pressures up to 60,000 psi (4137 bar)
- 6 inches in diameter air piston
- Broad range of ratios
- Single and Double Piston

ACHL Series:

- ACL Series Pump with hand lever - Air or Manually Driven
- Pressures up to 31,900 psi (2199 bar)
- Precise Pressure control operation, pump is spring returned
- 3 inches in diameter air piston

AFL Series:

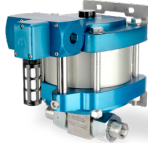

- High Flow, High Pressure
- Pressures up to 5,000 psi (1035 bar)
- Flow up to 6.8 gpm (25 lpm)
- Dual Acting

AHL Series:

- High Flow up to 7.6 gpm (29 lpm)
- Pressures up to 22,500 psi (917 bar)
- Approximately 10 inch diameter air piston
- Dual Acting

Pump Operation

Piston to Plunger Ratio

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

Pressure Ratio = Area of Air Piston ÷ Area of Hydraulic Plunger

- The higher the pressure ratio, the higher the output hydraulic pressure

Pressure Output = Pressure Ratio x Air Drive Pressure

- When air is applied to the pump it will cycle until the forces on the air piston equals the forces on the hydraulic plunger. This is the stall pressure.
- Pump will automatically restart if there is a drop in hydraulic pressure or an increase in air drive pressure.
- Double air pistons available which will double the pressure ratio because you have twice the air piston area acting on the same hydraulic plunger area.

Air Drive Section

- Compressed air is used to produce hydraulic pressure
- Works on differential surface area between the large air piston and smaller hydraulic plunger
- Differential is represented by the pressure ratio of the pump

Section 1

- Air pilot operated spool provides automatic cycling of air from one side of the piston to the other
- At the end of each stroke, the air piston activates a pilot valve that will cause the spool to shift

Section 2

- The spool shifting will supply air to one side of the piston while venting the other side of the piston
- This alternating action continues until the pump reaches its stall pressure

Typical Pump Cut-Away

	Description
A	Air Inlet
B	Top End Cap
C	Air Muffler
D	Air Cylinder
E	Bottom End Cap
F	High Pressure Outlet Connection
G	Outlet Check Valve
H	Pilot Valve

	Description
I	Air Piston Bumper
J	Air Piston
K	High Pressure Seal Assembly
L	Liquid Inlet Connection
M	Inlet Check Valve
N	Pump Head Body
O	Hydraulic Plunger

Pump Special Features & Benefits

- All Aluminum parts machined from high quality bar stock, not cast aluminum components
- Anodizing with special sealing technique to provide better protection from harsh environments
- Muffler specified to give a great combination of high flow and low noise
- Rubber bumpers in end caps to reduce noise of operation
- Latest lubrication technology provides long seal service life and improves pump efficiency and performance
- No lubricator required for air drive source
- Stainless steel tie-rods and hardware
- Stainless plunger coated with a proprietary multi-layer carbon based coating with diamond like carbon exterior layer:
 - High hardness (3 times harder than Stellite)
 - Inert, it has superior chemical compatibility and corrosion resistance
 - Low friction that limits seal wear and increases efficiency (coefficient of friction equal to or less than PTFE)
 - Tough coating that provides long plunger cycle life.
- Pressure head specially designed and engineered for high cycle life
- Spring energized U-cup seal provides better sealing performance at wide ranges of pressures
- Extended service life check valves with Ceramic balls for high pressure applications

ASL SERIES Single-Acting, Single or Double Piston Air Drive

Features:

- Pressure Ranges from 1,600 to 60,000 psi (110 to 4100 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated with proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Side Inlet Only – see chart (page 9)
- Isolation Chamber: Only available on ASL400-02 pump
- Displacement per stroke: See chart (page 9)
- Liquid Seals:
 - ASL10 to ASL35 = UHMWPE U-Cup and FKM Orings (PV option)
 - ASL60 to ASL400 – UHMWPE U-Cup w/Elgiloy Spring Energizer
- Air Drive Pressure Range: 15-150 psi (1-10 bar) * See Note
- Main Air Inlet: ½" FNPT (Regulated)
- Pilot Air Inlet: 1/8" FNPT (unregulated)
- Max Air Consumption: 70 SCFM @ 90 psi (no pressure)
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure shown in chart on Page 9.

ASL Pump Part Number Matrix

For complete information on available pump options, contact Parker Autoclave Engineers.

Typical catalog number: **ASL25-01SNPV**

Pump Type / Size / Ratio

ASL = • Standard Liquid High Flow, High Pressure Pump

• Air-to-Liquid Pressure Ratio:

Single Piston	Double Piston
ASL10-01 - 1:11	N/A

Air Drive Connection

All ASL Series Pumps have a 1/2" FNPT regulated main air drive supply connection and utilize a 1/8" FNPT pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure unregulated than the main air drive supply pressure for proper function.

*See following page for product dimensions.

Note:

- Each mounting bracket includes (2) x 11/32" (8.73) slots for 5/16" bolts.
- All dimensions are for reference only and are subject to change without notice.
- Primary dimensions: Inches, Secondary Dimensions: (Millimeters)

ACHL SERIES Single-Acting, Single Air Drive with Hand Lever

Manual Operation

Air Driven Pump includes Hand Lever for manual operation or precise pressure control, remote locations, or emergency back-up.

Features:

- Pressure Ranges from 12,500 (860 bar) or 31,900 psi (2200 bar) maximum
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Liquid Side Material: All Stainless Steel Construction
- Air Side Material: Anodized Aluminum

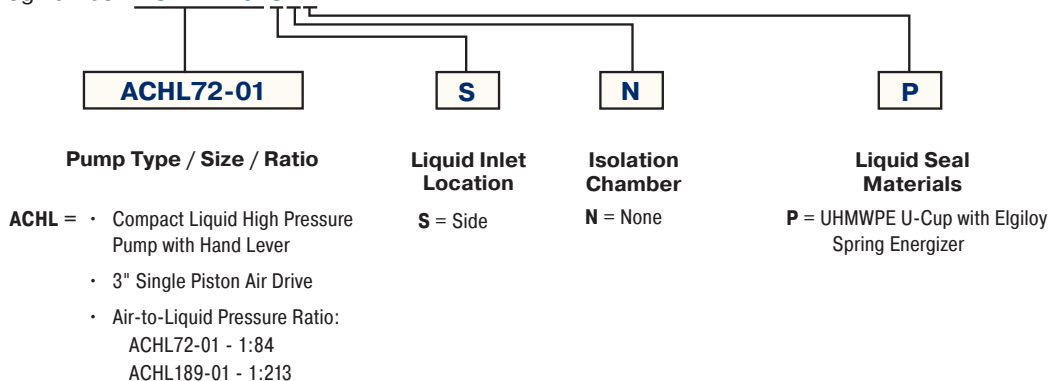

Technical Data:

- Liquid Connections: Side Inlet Only – see chart (page 14)
- Displacement per stroke: See chart (page 14)
- Liquid Seals: UHMWPE U-Cup w/Elgiloy Spring Energizer
- Air Drive Pressure Range: 15- 150 psi (1-10 bar) * See Note
- Main Air Inlet: 1/4" FNPT (Regulated)
- Exhaust port (muffler removed) 1/4" FNPT
- Air Seals: Buna-N
- Pre-lubricated at Factory

Note: *Maximum air drive pressure is limited by maximum pressure, see rating show above.

Air Drive Connection

All ACHL Series Pumps have a 1/4" FNPT regulated main air drive supply connection

AFL SERIES Double-Acting, Single Piston Air Drive

Features:

- Pressure Ranges from 5,600 to 15,000 psi (385 to 1035 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated w/proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless-Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Bottom Inlet Only – see chart (page 17)
- Isolation Chamber: Standard on all sizes
- Displacement per stroke: See chart (page 17)
- Liquid Seals: UHMWPE U-Cup w/ optional o-rings (see P/N matrix)
- Air Drive Pressure Range: 15- 150 psi (1- 10 bar) * See Note
- Main Air Inlet: 3/4" FNPT (Regulated)
- Pilot Air Inlet: 1/8" FNPT (unregulated)
- Exhaust Port (muffler removed) 1" FNPT
- Max Air Consumption: 167 SCFM @ 90 psi
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure shown in chart on Page 17.

Air Drive Connection

All AFL Series Pumps have a 1/2" FNPT regulated main air drive supply connection and utilize a 1/8" FNPT unregulated pilot port connection for remote start/stop operation. It is recommended to operate the pilot port at a higher air pressure than the main air drive supply pressure for proper function.

Note:

- Each Mounting Bracket includes (2) 9/16" (14.29) holes for 1/2" Bolts.
- All dimensions are for reference only and are subject to change without notice.
- Primary Dimensions: Inches
- Secondary Dimensions: (Millimeters)

AHL SERIES Double-Acting, Double Piston Air Drive

Features:

- Pressure Ranges from 6,700 to 22,500 psi (460 to 1550 bar) max
- Operating Temperature Range: 0° to 140°F (-18° to 60°C)
- Pressure Head Material: 15-5 PH Stainless Steel
- Plunger: Stainless Steel, coated w/proprietary multi-layer carbon for long life
- Liquid Side Material: All Stainless-Steel Construction
- Air Side Material: Anodized Aluminum

Technical Data:

- Liquid Connections: Dual Side Inlet Only – see chart (page 20)
- Isolation Chamber: Standard on all sizes
- Displacement per stroke: See chart (page 20)
- Liquid Seals: Thermoplastic Polyester U-Cup w/ optional o-rings (see P/N matrix)
- Air Drive Pressure Range: 20-100 psi (1.5-7 bar) * See Note
- Main Air Inlet: 1" FNPT (Regulated)
- Pilot Air Inlet: 1/8" FNPT (unregulated)
- Exhaust Port (muffler removed) 1" BSP
- Max Air Consumption: 290 SCFM @ 50 psi (no pressure)
- Pre-Lubricated Piston at Factory
- Air Seals: Buna-N

Note: *Maximum air drive pressure is limited by maximum pressure

AHL Pump Part Number Matrix

Typical catalog number: **AHL66-2DSCTV**

Pump Type / Size / Ratio

- AHL** =
- High Flow, Liquid High Pressure Pump
 - 10" Dual Piston Air Drive
 - Air-to-Liquid Pressure Ratio:
 - AHL33-2D - 1:67
 - AFL66-2D - 1:133
 - AFL118-2D - 1:239

Liquid Inlet Location

S = Side

Isolation Chamber

C = Included

Liquid Seal Materials

- TV** = Thermoplastic Polyester U-Cup and FKM O-Rings
- TB** = Thermoplastic Polyester U-Cup and Buna-N O-Rings
- TC** = Thermoplastic Polyester U-Cup and Perfluoroelastomer FFKM O-Rings

Note: Individual Pump Specifications can be found at www.Autoclave.com.

AHL66	32.66 (829.61)	30.16 (766.11)
AHL118	32.66 (829.61)	30.16 (766.11)

Note:

- Each Mounting Bracket includes (2) 9/16" (14.29) holes for 1/2" Bolts.
- All dimensions are for reference only and are subject to change without notice.
- Primary Dimensions: Inches
- Secondary Dimensions: (Millimeters)

Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further information call 1-800-C-Parker.

! CAUTION !

Do not mix or interchange component parts or tubing with those of other manufacturers. Doing so is unsafe and will void warranty.

Parker Autoclave Engineers Valves, Fittings, and Tools are not designed to interface with common commercial instrument tubing and are designed to only connect with tubing manufactured to Parker Autoclave Engineers AES specifications. Failure to do so is unsafe and will void warranty.

WARNING

FAILURE, IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).
