PRODUCT INFORMATION

Extreme Environments Demand The Viking Xtreme

The Viking Xtreme valve range is robust, versatile and combines high performance with compact installation dimensions. Large flow capacity, short change-over times and low change-over pressure are important characteristics of this valve range.

The 1/8 & 1/4 sizes are designed to operate with pressures up to 16 bar and the 3/8 & 1/2 sizes up to 12 bar in ambient temperatures -40 °C to + 70 °C when fitted with suitable solenoid operators.

Viking Xtreme range

P2LAX. dimension G1/8

P2LBX. dimension G1/4

P2LCX. dimension G3/8

P2LDX. dimension G1/2

Manually operated range

The complete range includes lever operated versions. They feature a rugged hand lever specifically designed for gloved hands and are available in 3/2, 5/2 and 5/3 functions

Wide range of 3/2, 5/2 and 5/3 valves for manual, pneumatic or electric operation

Pilot chamber breathers are protected against ingress of dust and dirt.

Robust valve anodised aluminium valve body. The bore is polished to a very high surface finish for maximum flow capacity and long life.

Aluminium spool with TPU (Thermoplastic Polyurethane), ground to exact size for optimum performance.

Stainless steel end cover screws resist aggressive environments.

Diecast end covers

Over-moulded single piece aluminium spool

- Reduced product complexity
- Increased flow
- Wide operating temperature range.
- Stable seal performance even with high flow/pressure drop across spool.

TPU (Thermoplastic Polyurethane)

Precision ground for maximum performance

PRODUCT INFORMATION

Whatever the environment. Push it to the Xtreme

Compact installation dimensions - flexible installation

Compact dimensions direct body porting and integral mounting holes are all features of the Viking Xtreme range. In addition to single valve installation, the Viking valve may be installed on manifolds so that the valves have a common supply and manifolded exhausts.

Mobile applications

The Viking Xtreme valves have a robust body which is machined out of solid aluminium bar and then anodised. Valves have passed aggressive salt spray, and demanding vibration tests and will operate in ambient temperatures of -40 °C to +60 °C. Solenoids are available having wide voltage tolerance for mobile applications.

Maintenance

The Viking Xtreme valve range has been developed from the very successful VGD15 and P2L-A product ranges which have a history of reliable and long service life in demanding and difficult applications. Spares kits are available for the valve and solenoid operators.

Manually operated versions

The range has now been extended to include lever operated versions. The rugged lever actuator has been specifically designed for gloved hands to suit mobile applications in the most arduous of environments.

Available in 3/2, 5/2 and 5/3 functions with either spring return or detented lever and with a choice of mid position function in the 5/3 versions. The lever actuated versions are available across the entire range of port sizes G1/8, G1/4, G3/8 and G1/2.

High reliability

Valves easily comply with the requirements for the component reliability in accordance with EU Machinery

Directive standards EN292-2 and EN983. The valves have passed Shocks & Vibrations tests IEC 61373 : 2010 cat. 1 class B.

The Viking Xtreme valves have few moving parts combined with short spool movement, these features combine to give valves having high reliability and long service life. The valves are designed for use with or without supplementary lubrication.

Rust and corrosion resistant designs.

Viking valves are made entirely of anodized aluminium, for good corrosion resistance. The smooth design, with no dirt-collecting pockets, makes the valve suitable for most environments, including applications with stringent hygiene requirements. The valve has stainless steel fixing screws for the end covers, to withstand aggressive environments.

Insensitive to dirty air

Thanks to large flow passage areas and the large flow diameter of 1.0 in the pilot valves, the P2LA and P2LB can be used in normal industrial or mobile environments without any problems of blocking. However the service life of the valve depends on the cleanliness of the air. Please refer to ISO 8573.

Valves having ATEX approval.

ATEX approved options are available for use in explosive atmospheres. Consult our Technical Sales Department for further information.

Complete range

Manual, pneumatic, electric, 3/2, 5/2 & 5/3; the Viking Xtreme valve range is suitable for a multiple application. For mobile or industrial applications, all functions are available from G1/8 to G1/2 using the same design and technology.

Electric Motion and Pneumatic Division - Europe

Flexible multiple installation

There is a system of multiple installation plates, intermediate blocks and several variants of connectors for the P2LA.

Several variants of connectors are available, which permit connection from above, beneath, straight from the side or in the middle of a valve block. Using the type L manifold, valve blocks may be constructed for supplying several different pressures.

Manifold bar installation

A manifold bar, with common ducts for ports 1, 3 and 5 gives simple, time saving and easily serviced installation.

Manifold bars are available in several different sizes, with space for between 2 and 14 valves. They are designed for simple handling and are entirely serviced from the front.

Pressure bar installation

A pressure bar for common primary air supply gives a simple, robust, time saving and easily serviced installation. When pressure bars are used, restrictor-silencers can be installed in the exhaust ports of each valve, for individual adjustment of cylinder/air motor speed. Pressure bars are available in a number of different sizes, with space ranging from 2 to 10 valves.

WORKING MEDIUM. AIR QUALITY

Working medium:
Dry. filtered compressed air to ISO 8573-1:2010 [4:2:4].

Recommended air quality for valves

For best possible service life and trouble free operation. ISO 8573-1:2010 [4:2:4] should be used (see table below), which is what a standard compressor with a standard filter gives.

ISO8573-1:2010 CLASS	Solid Particulate				Water		Oil
	Maximum number of particles per m ³			Mass Concentration mg/m ³	Vapour Pressure Dewpoint	Liquid g/m ³	Total Oil (aerosol liquid and vapour)
	0.1 - 0.5 micron	0.5 - 1 micron	1 - 5 micron				mg/m ³
0	As specified by the equipment user or supplier and more stringent than Class 1						
1	≤ 20 000	≤ 400	≤ 10	-	≤ -70 °C	-	0.01
2	≤ 400 000	≤ 6 000	≤ 100	-	≤ -40 °C	-	0.1
3	-	≤ 90 000	≤ 1 000	-	≤ -20 °C	-	1
4	-	-	≤ 10 000	-	≤ +3 °C	-	5
5	-	-	≤ 100 000	-	≤ +7 °C	-	-
6	-	-	-	≤ 5	≤ +10 °C	-	-
7	-	-	-	5 - 10	-	≤ 0.5	-
8	-	-	-	-	-	0.5 - 5	-
9	-	-	-	-	-	5 - 10	-
X	-	-	-	> 10	-	> 10	> 10

Typical cylinders speeds which can be achieved with Viking valves and different tube sizes.

In the chart below you can find the suitable valves, tubes etc. for each cylinder size. If you have a tube length over 2 m. choose one tube size larger than in the chart.

Following data is valid:

Supply pressure: min 7.0 bar

Regulator pressure setting: 6.0 bar

Pipe length between air treatment unit and valve: max 1 m

Pipe length between valve and cylinder: max 2 m

Cylinder bore	<20	20-32	40-50	63	80	100	125	160	200

7		5/3 valve pressurised centre
8		5/3 valve vented centre
Solenoïd operated with external pilot supply to solenoïds through ports 10 & 12 for 3/2 version and through ports 12 & 14 for 5/2 & 5/3 version		
L		3/2 valve
N		5/2 valve
P		5/3 valve closed centre position
Q		5/3 valve pressurised centre
R		5/3 valve vented centre

Overrides	
A	None
B*	Flush - non locking
C	Flush - locking
D	Extended non-locking
E*	Extended - locking
X	Less 15mm solenoïd

* Only available with enclosure 5

Industrial Voltages			
	AC		DC
	60Hz	50Hz	
40	12		
42	24	22	
45			12
47			12
49			24
53	120	110	
57	240	230	
XX	valve less solenoïd/coil		

Solenoïd enclosure	
15 mm Industrial Operator	
X	Valve less 15 mm solenoïd
5	15 mm. 3 pin Form C/ISO15217 in line with body
22x22 mm Industrial Operator	
B	with 3-pin Industrial Form B solenoïd
N	without solenoïd

Pilot main actuator/return	
E	Solenoïd operated valve
S	Spring (return only)
P	Press (return only)

Shaded part numbers are available from stock Unshaded part numbers are available on request but can be subject to minimum order quantities. Otherwise coil/solenoïd operator can be ordered separately.

SOLENOID OPERATED DIRECTIONAL CONTROL VALVES

Fitted with Industrial 15 mm DIN C solenoid operator(s) 24V DC

INTERNAL supply to operator valve(s) via port 1

Maximum operating pressure : 10 bar

Operating Temperature Range : -15°C to +60°C

Solenoid plug/connector to be ordered separately

SOLENOID OPERATORS - 15 MM

The P2E-•V solenoid operator range

The P2E-•V range of operators are normally closed (NC) 3/2 solenoid valves, with exceedingly compact dimensions in relation to their capacity.

International standard

The port connection pattern complies with a new French CNOMO standard (in process of drafting), with cable plug connections in accordance with Form C/ISO15217.

Compact design

Overall dimensions of the P2E-•V operators are substantially less than those of earlier generations of solenoid operators.

High flow capacity

High flow capacity relative to the electrical operating power as a result of optimised internal flow paths.

Corrosion-resistant design

The valve is made of thermoplastic material and stainless steel, with Viton™ and nitrile rubber seals for excellent corrosion resistance.

Clean lines suitable for food industry applications. P2E-QV

The valve has been designed in conjunction with several machine manufacturers and organisations in the food processing industry, with corrosion-resistant materials and smooth lines being important starting points. The valve and its accessories have been designed so that there are no gaps or crevices in which dirt could collect.

High reliability

Few moving parts result in high reliability, rapid changeover and very long life.

Low power demand

The solenoids have a power demand of 1.2 W at 24 V DC and 1.6 VA at 24 V AC, 115 V AC and 230 V AC.

High protection class

The protection class is IP 65 when connected using the cable plug with a moulded cable. When using the standard cable plug for fitting by the user, the protection class is IP65, the bare valve, with Fast-on connectors, has an encapsulation class of IP 20.

Insensitive to dirty air

The use of generously sized flow paths (1.0 mm diameter) means that the valve can be used in normal industrial environments without problems of blocking.

Manual override as option

The operators can be supplied with our without manual override. The manual override device is available as a screwdriver groove or with a control arm, and is either spring return (blue) or lockable (yellow).

Working media:	All neutral media, such as compressed air, water, hydraulic oil and many gases.		

¹⁾ Design: Completely smooth exterior, suitable for food industry.
²⁾ Mobile standard: According to European standard EN 50 155.
 * Power. hold for 230VAC 2.4VA, Power. surge for 230VAC 5.5VA

Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavourable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the maximum life of relays in the circuit (and particularly of transistors, thyristors and integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All cable plugs with a yellow LED also incorporate such protection.

Service life

With compressed air at 6 bar, 20 °C and complying with the requirements for compressed air quality as set out in ISO8573-1 norm (class 4 for dry and class 5 for filtered air), the valves should have a life of at least 50 million cycles.

Materials

Operator	
Body, coil casing	Thermoplastic
Internal metal parts	Steel
Screws	Stainless steel
Bottom plug	Thermoplastic
Sealing materials	FPM (Viton™) and nitrile rubber

Cable head	
Sheath	Thermoplastic
Retaining screw	Stainless steel, zinc-plated steel

In accordance with the EU Machine Directive. EN 983. solenoid valves with manual override should have spring-return operating arms for safety.

SOLENOID OPERATORS - 22 MM

22mm Solenoid pilot options

The P2F P13*4* (NC) 3/2 solenoid pilot operators are designed for piloting pneumatic control valves with compressed air or other inert gases.

The P2F P operator is available for Normal operating pressures up to 10 bar having an outlet orifice 1.3 mm and exhaust orifice 1.5 mm. An alternative operator is also available having an outlet orifice of 0.8 mm and exhaust orifice of 1.0mm for Xtreme maximum operating pressure of 16 bar and wide band voltage tolerances required for mobile applications.

For hard environment, a metal operator (anodised aluminium) with brass manual override is available with a 1.2 mm outlet orifice and 1.3 mm exhaust orifice. Different temperature range is covering inside . outside application.

Corrosion resistant design

The pilot operator body is manufactured in thermoplastic PA 6 material and the core tube brass/stainless steel. The plunger/core is made from stainless steel and the valve seats from FKM.

Solenoid Pilot Exhaust

These operators all exhaust out of the top of the core tube which is tapped M5. The standard solenoid nut fitted to the core tube is the Diffuser nut which allows the exhaust to escape to atmosphere. This nut also minimises ingress of dirt into the valve through this port. The alternative plastic knurled nut can be specified (refer to part number system) if the exhaust air needs to be captured and piped away using the M5 tapped port.

Coils

Coils are wound with enameled copper wire, having temperature index 180 °C with class F insulation (155 °C) and are encapsulated in Thermoplastic resin. When fitted with suitable connector and correct gasket they give protection to IP65.

Mobile Applications

Viking Xtreme valves are tested to +5 g shock and vibration. Solenoid operated valves are designed to operate with wide voltage tolerance bands within the ambient temperature ranges stated in the technical section.

Manual Override options

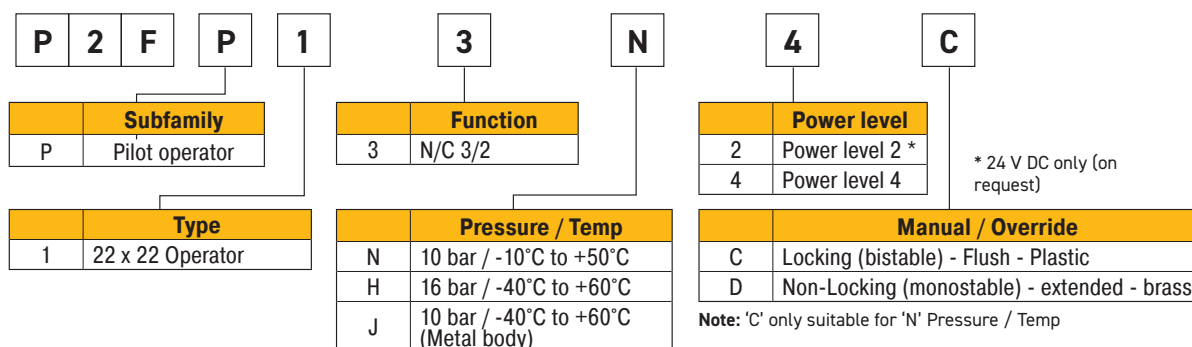

The pilot operators can be supplied with or without manual override. The standard manual override is the monostable (spring return) extended brass override. Alternatively the bistable (locking) override can be specified as an alternative for the Normal duty 10bar option.

Spares

Solenoid operators are available as spares complete with mounting screws and seals. Coils and connectors should be ordered separately.

Mobile applications

Solenoid operated Viking Xtreme duty valves for mobile applications are fitted with the P2FP13H4D solenoid pilot operator. It has a 22 mm footprint with 0.8/1.0 mm orifice and will accept 22 mm or 30 mm coil options. The choice of coil option will depend on the voltage tolerance, operating ambient temperature range and maximum operating pressure. Use the technical data in the table above before selecting the coil type required or contact our technical department.

Transients

Interrupting the current through the solenoid coil produces momentary voltage peaks which, under unfavourable conditions, can amount to several hundred times the rated operating voltage. Normally, these transients do not cause problems, but to achieve the maximum life of relays in the circuit (and particularly of transistors, thyristors and

integrated circuits) it is desirable to provide protection by means of voltage-dependent resistors (varistors). All connectors/cable plugs with LED's listed on page 54 include this type of circuit protection.

Materials

Pilot Valve

Body:	Polyamide
Body:	Anodised aluminium for J type
Armature tube:	Brass (Normal) Stainless Steel
	16 bar mobile
Plunger & core:	Corrosion resistant Cr-Ni steel
Seals:	FKM (Viton™)
Screws:	Stainless steel

Coil

Encapsulation material: Thermoplastic

SUB-BASES & MANIFOLDS

P2LAX - 5/2 and 5/3

P2LAX. flexible manifold assembly

A practical system solution with the aid of connection pieces. The manifolds can easily be assembled from the top to form a compact and stable block. The block can then be installed in cabinets or directly on the machine frame as shown in the example in the bottom of this page.

Valve:
with cylinder ports 2 and 4 and signal ports 12 and 14 facing upwards. enabling easily access to connection ports. All ports are G1/8 threaded to simplify choice of connectors.

Manifold:
with common channels for ports 1, 3 and 5.

Connection block S:
straight connection block with a side ports for common air supply and exhaust.

Connection block L:
angled connection block for top or bottom ported.

End cover

Blanking plate:
To incorporate spare positions.

Intermediate block L:
enables the block to be divided for different supply pressure. Top or bottom ported.

Intermediate block T:
permits the connection of air between two manifolds. Top or bottom ports.

Connection block S:
straight connection block with a side ports for common air supply and exhaust.

Connection block L:
angled connection block for top or bottom ported.

End cover

Various mounting options

1. With M6 screws for installation from the connection blocks.

2. With M5 screws from the top in any manifold

3. With a self-tapping M6 screw from below to any manifold.

Assemble with the indication line (10 mm long line) on the same side on all blocks.
